1 (Trial resumed)

2 THE COURT: Good morning, who do we have?

3 MS. AGNEW: Good morning, your Honor. Plaintiff class
4 would like to call Dr. Adam Carinci.

5 ADAM JOHN CARINCI,

6 called as a witness by the Plaintiffs,

7 having been duly sworn, testified as follows:

8 THE DEPUTY CLERK: Please state and spell your name
9 for the record.

10 THE WITNESS: My name is Adam John Carinci,
11 C-A-R-I-N-C-I.

12 THE COURT: Ms. Agnew.

13 DIRECT EXAMINATION

14 BY MS. AGNEW:

15 Q. Good morning, Dr. Carinci.

16 A. Good morning.

17 Q. Why are you here today?

18 A. I'm here to testify in this trial with regards to 70
19 essential inmates that are claiming mistreatment with regards
20 to medications with potential abuse potential.

21 Q. Could you go through your educational background for the
22 Court. You don't have to give us all your grades. We just
23 want to know where you went to school. Let's start with
24 undergraduate education, please.

25 A. So undergraduate is at Pace University. I did a

N96Ball1

Carinci- Direct

1 biochemistry degree. I then moved into medical school at Johns
2 Hopkins University School of medicine. This was followed by
3 residency in anesthesiology, critical care and pain management
4 also at Johns Hopkins hospital.

5 My final year of training was at Massachusetts General
6 Hospital and Harvard Medical School with a fellowship in pain
7 management.

8 Q. Okay. And during the course of your education or at any
9 time thereafter did you hold any teaching positions?

10 A. Yes. So when I finished my fellowship, I stayed on faculty
11 at Harvard Medical School at Mass General hospital. I was an
12 assistant professor there. I had responsibilities for teaching
13 medical students as well as interns, residents and pain
14 management fellows for approximately seven years while I was on
15 staff there.

16 I then in my current role at University of Rochester
17 Medical Center I have similar responsibilities. I'm an
18 associate professor of anesthesiology and pain management. I
19 also teach medical students, residents and fellows.

20 Q. When you were teaching at Harvard Medical School, sir, did
21 you give any lectures?

22 Did you publish?

23 A. Yes, I gave many lectures on a monthly basis, so these were
24 ongoing lectures with regards to various aspects of pain
25 management. I also did publish book chapters as well as

N96Ball1

Carinci- Direct

1 several articles in pain management journals throughout that
2 time.

3 Q. Can you tell me, sir, just for those in the room who may
4 not know, I think you mentioned training in anesthesiology and
5 in pain medicine, are those two separate disciplines?

6 A. Yes. So anesthesia is my primary board certification, and
7 that is a general grounding in aspects of pain management.

8 But in terms of specialization, in terms of being able
9 to practice the area, the specialty of pain management, one
10 would have to pursue a fellowship, which is an additional year
11 of training that is very specific and focused on the area of
12 pain management.

13 Q. And I want to be clear because I don't always understand
14 the distinction. When I think of an anesthesiologist, I think
15 of the doctor who's in the operating room.

16 Is that what you do, sir, in your daily practice, you
17 go into operating rooms and put people under?

18 A. No. In the early parts of my career, that was something I
19 did. Now I'm engaged entirely in the practice of pain
20 management, which is essentially outpatient, pain management,
21 dealing with medication, prescriptions, interventional
22 procedures, essentially just dealing with the area of pain
23 management, and not at all dealing with operating room
24 anesthesia as you're referring to.

25 Q. And so as at this point in your life, for how many years

N96Ball1

Carinci- Direct

1 have you been treating patients in pain management?

2 A. I finished my fellowship in 2009, so since then
3 continuously.

4 Q. In what states do you hold medical licenses currently?

5 A. Now just New York.

6 Q. Where did you previously hold medical licenses?

7 A. Massachusetts, Louisiana and New York. I've since let
8 Massachusetts and Louisiana -- I just didn't renew them. I let
9 them lapse.

10 Q. Have you ever had any blemishes on your medical licenses?

11 A. No.

12 Q. To your knowledge has anyone ever complained to any medical
13 review boards or professional associations about your practice?

14 A. No.

15 Q. Can you tell me, Dr. Carinci, over your career
16 approximately how many patients have you seen and treated --
17 and I'm not asking for a concise number -- in the area of pain
18 management?

19 A. Well-over 10,000 patients.

20 MS. AGNEW: Your Honor, the plaintiff class moves to
21 qualify Dr. Adam Carinci as an expert in pain management.

22 MR. NOLAN: No objection, your Honor.

23 THE COURT: He is so qualified.

24 Q. Dr. Carinci, for this case, can you tell me what's your
25 understanding of why we hired you?

N96Ball1

Carinci- Direct

1 A. I was hired for two primary reasons. The first was to
2 review MWAP policy and how it was instituted in regards to the
3 named plaintiffs in this case, and to ascertain whether that
4 was consistent with the standard of care.

5 The second area was to review the reassessment process
6 to determine whether that was done appropriately and consistent
7 with best practice.

8 Q. And when you talk about looking at the MWAP policy, I think
9 you just said the named plaintiffs, but was your study isolated
10 to the 18 named plaintiffs?

11 A. No.

12 Q. First of all, let's just start, did you publish a report of
13 your findings in this case?

14 A. Yes.

15 Q. And so what I'd like to do is talk about the things that
16 you examined before you wrote your report in order to come to
17 the conclusions that you did.

18 A. Okay. Beginning with the medical records was the primary
19 evaluation. So given the voluminous amount of records in this
20 case, I had asked that your firm provide summaries of the
21 patients, which I could then use as a 10,000-foot view or
22 springboard to really delve into the substance of each
23 patient's record.

24 And from there, I reviewed MWAP forms, the medical
25 records, and really the entirety of their chart to come to my

N96Ball1

Carinci- Direct

1 conclusions.

2 Q. When you say you reviewed the entirety of their chart,
3 isn't it true we created, meaning my office, subsets of the
4 medical records for you at your direction?

5 A. Yes. So, again, when I was asking to engage in this, I
6 understood there was a timeframe that was of the essence given
7 that there was some number of patients that were being harmed
8 potentially and that time was of the essence in putting this
9 together.

10 And so to make my time and my ability to actually
11 process through the records, I had asked that -- again, there
12 were certain particular areas that I wanted to look closer at
13 again with that 10,000-foot view. And if you could provide
14 that to me and then also references to the underlying medical
15 records so that would be fruitful to me in being able to
16 effectively process it.

17 And I'll just open my report if you don't mind to
18 again review those particular areas.

19 Q. We just want you to refresh your recollection, but not read
20 your report, sir, okay.

21 A. Yes. Just as a matter of reference, page nine, there were
22 nine things --

23 Q. Let's stop, Dr. Carinci.

24 MS. AGNEW: Mr. Manly, to your right is a set for the
25 judge.

N96Ball1

Carinci- Direct

1 THE COURT: Thank you so much.

2 Q. Please continue, Dr. Carinci.

3 A. Just to be more specific about what I had asked you, again,
4 there were nine particular things that I wanted you to focus
5 on, and I'm happy to read those if you'd like me to, but really
6 they're on page nine, patient file review, subsection A, nature
7 of the files reviewed.

8 So there were these multiple areas that I really
9 wanted to delve into in order to answer the questions I was
10 asked to be answered.

11 Q. To assess kind of the history of pain management, why were
12 those particular records necessary for you to look at?

13 A. I understood early-on that the critical aspect of this were
14 with regard to medication with potential abuse, and whether
15 these patients were inappropriately discontinued on their
16 medication and was their medical rationale for doing so.

17 In order to really be able to answer that question, I
18 had to dig through information about, for instance, any issues
19 with drug abuse, any history of what was their primary
20 diagnosis while they were there, what type of diagnostic
21 testing had been established for instance, what type of
22 medications were they on and was there any indication that
23 those medications were successful in improving pain and
24 improving function.

25 Were there any specialist consultations and

N96Ball1

Carinci- Direct

1 recommendations thereof. Importantly, I wanted to know about
2 the MWAP request forms and were those available for the
3 particular patients, and so on and so forth, really just
4 delving into a broad view of the patient's history, and then
5 with the ability to dig deep to formulate my own conclusions
6 about that.

7 Q. Can you explain to the Court your understanding of what an
8 MWAP request form is in the context of this case?

9 A. So the patients were being treated -- I'll refer to it like
10 the first level provider or the primary provider within the
11 system that would determine whether they were a candidate for
12 one of these medications.

13 So medications with abuse potential is or was a list
14 of medications that were deemed to have potential abuse
15 liability, and it ranged from things like gabapentin up to
16 things like opioid, such as percocet and hydrocodone, and
17 various sort of things within.

18 And the MWAP request form was completed by this first
19 level provider if they were examining the patient and they
20 thought the patient was a candidate for one of these
21 medications. They would complete one of these forms.

22 And it was my understanding that that form would then
23 circle up to what was called the regional medical director who
24 would essentially be able to give a thumbs up or thumbs down, a
25 yes or no, with regards to that medication.

N96Ball1

Carinci- Direct

1 Q. When you were working on your report, did you review all of
2 the MWAP request forms?

3 A. No. There was at minimum it seemed over 10,000 of these
4 MWAP request forms. So again, in order to make my time
5 fruitful and to be able to efficiently process through the
6 volume of information, I again asked your office to put that
7 information into a much more easily read format in a summary
8 essentially of those forms.

9 So that I could again get a general sense for what was
10 the outcome of those requests, again in a general sense, and
11 then be able to take a very deep dive when needed and wanted on
12 particular patients.

13 Q. Can you tell me when you were looking at medical records
14 and the summaries we created, did you rely on my office's
15 summaries?

16 A. No, not at all.

17 Q. How did you use the summaries?

18 And I apologize. You explained a little bit, but I
19 want the record to be extremely clear as to how those summaries
20 were used by you?

21 A. Again, I think if we just take a step back, I been trying
22 to answer the questions that we've talked about. There was at
23 least 225,000 pages of medical records here that we're dealing
24 with.

25 So I asked you to put together a brief summary of each

N96Ball1

Carinci- Direct

1 of these patients with references to the underlying medical
2 records. And I didn't ask for any interpretation. I just ask
3 for raw factual data with regards to pertinent dates,
4 medication names and general history of the patient.

5 From there, I would read that summary to just garner a
6 really high level what I would call a 10,000-foot view of
7 patient X. From there, I would then delve into the underlying
8 medical records to synthesize that information and formulate my
9 own opinion. So your summaries were again simply factual
10 information that I checked against the medical records, but did
11 not rely on in formulating my opinions.

12 Q. When you looked at these summaries and in certain instances
13 contrasted them with the medical records, were the summaries
14 perfect?

15 A. No.

16 Q. And did you at any time believe that the summaries were
17 being created by medical professionals?

18 A. No.

19 Q. So other than the medical records in the MWAP request
20 forms, what other sources of evidence did you use before you
21 drafted your report?

22 A. Well, for 17 of these individuals, I personally examined
23 them. So on several dates I went out to the facilities where
24 some were located and interviewed them, performed an
25 examination of them, spoke with them, had access to their

N96Ball1

Carinci- Direct

1 medical records, both before and during.

2 And so that was also a significant portion of my
3 understanding that garnered additional information from that.

4 Q. Dr. Carinci, why didn't you go and physically examine each
5 one of the patients that you speak about in your report?

6 A. I think first off I didn't specifically request to see any
7 one particular individual or all of them. I was available to
8 review whoever was available to be seen on those dates.

9 And I think you worked with the defense in determining
10 who was available to be seen, what was the time which we could
11 accomplish this.

12 And I think also importantly, this was during the sort
13 of early days of Covid and there was a lot of restrictions at
14 these facilities about who could enter and for what purpose.
15 And so I think the logistical barriers were quite enormous even
16 to accomplish this evaluation of 17 of them, let alone all of
17 them.

18 Q. And I just want to walk through generally what your
19 encounter was like and how you conducted it with any one of the
20 17 who you did physically examine?

21 A. I'm sorry. Could you ask me again what is it you're looking
22 for specifically.

23 Q. I'd like you to explain to the Court in one of these
24 encounters where you went into a facility and examined a
25 patient, what steps did you take? What did the encounter look

N96Ball1

Carinci- Direct

1 like?

2 I'm looking for, did you do it as you might have done
3 for any patient in your own office?

4 A. Yes. To the extent possible, I essentially simulated how I
5 would examine and determine the course of treatment for a
6 patient who would come to see me in my own clinic in the
7 community.

8 And so I brought a reflex hammer, ability to test
9 strength and sensation. I performed a subjective interview
10 with the patient, kind of going in with knowledge of their
11 history already from their medical records. And so getting a
12 subjective sense of their pain, how they're describing their
13 pain, their location, the severity, importantly functional
14 measures of what they're able to do, again from a subjective
15 standpoint.

16 From there I moved into objective evaluations, which
17 are what I would consider a musculoskeletal and neurological
18 exam, which would be no different than I would perform with
19 again a patient that was seeing me in the community. So I'd be
20 looking at muscle strength, sensation, reflexes, range of
21 motion, tenderness, any sort of dysfunction of muscle atrophy.
22 Those would be the various things I would look at.

23 From there I would then move into my assessment of the
24 patient, having an understanding of what medications they're
25 currently on, what medications they were on in the past; where

N96Ball1

Carinci- Direct

1 is their function relative to memory in the past or current;
2 and then formulating a plan forward in terms of medications
3 that worked and where we could go in the future from an
4 assessment.

5 Q. Did you speak with the patients when you met with them to
6 examine them?

7 A. Yes.

8 Q. What were you looking for when you spoke to those patients?

9 A. I think in general I want to know their again subjective
10 and objective findings.

11 So from a subjective standpoint, I simply want to
12 know, hey, what is your pain score at rest, what is your pain
13 score with functional movements. And so when we talk about a
14 pain score, we're really talking about a range of zero to ten
15 is a very simple one. Zero is no pain. Ten is the most severe
16 pain, and just getting a sense of where they sort of
17 self-assess on that scale.

18 Pain location. I would want to know then the etiology
19 of the pain, so what type of data was available for me to
20 corroborate their systematology. And so I'm not -- I think any
21 physician in my specialty doesn't just accept what the patient
22 says at face value. We're looking to corroborate their
23 subjective complaints with objective findings. And so that
24 really was always the goal to corroborate what they're telling
25 me subjectively that I'm having X, Y and Z problem, with the

N96Ball1

Carinci- Direct

1 objective data. And so that's really the role that I'm playing
2 there.

3 Q. Before we get into the heart of your report and your
4 conclusions, can you tell me were there any patients you
5 examined who you felt did not need to be included in the
6 report; and if so, why?

7 A. Yes. There were two patients that I thought did not
8 have -- they did not meet the criteria for medication with
9 abuse potential. And that was Mr. Ernest Iverson and Mr. Jose
10 Torres were two of those.

11 And it really came down to I guess in the simplest
12 way, their subjective complaints were not corroborated by
13 objective data.

14 Q. And so then why did you determine not to include them in
15 your report?

16 Were you trying to skew your data? Were you trying to
17 skew your results?

18 A. No, it wasn't a means of trying to skew data. The point of
19 this exercise really was to determine who was a candidate for
20 medications with abuse potential, and was that policy as
21 applied to them done in a manner that was consistent with the
22 standard of care.

23 And so if someone was not a candidate in my opinion
24 for those medications with abuse potential, then they really --
25 it was really irrelevant whether the MWAP was applied to them

N96Ball1

Carinci- Direct

1 in a manner that was consistent with the standard of care
2 because we were really looking to see who was actually wronged
3 in this scenario.

4 Q. And can you tell me, Dr. Carinci, before you started
5 drafting your report, did you rely on any assumptions?

6 A. Yes, I did rely on several assumptions which I outlined in
7 page two of my report. I'm happy to go through those with you
8 if you'd like, or I'll just leave it at that. I did outline my
9 assumptions on page two.

10 Q. Why don't you just run through and summarize them briefly
11 for the Court, and then let's talk about the importance of
12 these assumptions or why you felt it was necessary to include
13 them in the report, okay.

14 MR. NOLAN: One quick objection. It's not really an
15 objection, but if he's going to be reviewing the report in this
16 detail rather than just refreshing recollection, should we
17 enter it into evidence.

18 MS. AGNEW: I'm happy to enter into evidence, your
19 Honor.

20 THE COURT: What do you want to call it?

21 MR. NOLAN: Just to be clear, it's just the text of
22 the report, not the underlying --

23 MS. AGNEW: Sure. Your Honor, in your bound copy it's
24 going to be the actual report itself is up to Exhibit 1, so
25 that will be pages 1 through 47. We're going to call that

N96Ball1

Carinci- Direct

1 P137, and let me quickly lay the foundation.

2 Q. Dr. Carinci, what I have not marked, but have just said
3 will be Plaintiff's P137 is in that bound copy in front of you
4 of pages 1 through 47.

5 Sir, do you know what that document is?

6 A. Yes.

7 Q. What do you know that document to be?

8 A. This is my expert report.

9 Q. And, sir, did you draft that document?

10 A. Yes, I did.

11 Q. And did you draft that document after you examined and
12 studied the evidence that you've explained to the Court here
13 today?

14 A. Yes.

15 Q. And, sir, is that your signature on the last page of the
16 report?

17 A. Yes.

18 Q. Did anyone else write this report?

19 A. No.

20 MS. AGNEW: Your Honor, I'd like to enter into
21 evidence Plaintiff's 137 which is the expert report of Dr. Adam
22 Carinci.

23 MR. NOLAN: No objection.

24 THE COURT: Received.

25 (Plaintiff's Exhibit 137 received in evidence)

N96Ball1

Carinci- Direct

1 BY MS. AGNEW:

2 Q. If you could just run through the assumptions. We don't
3 need to go into terrible detail, but we do want to understand.

4 A. Certainly. So the first assumption is this MWAP policy was
5 really put forth on June 1, 2017. That was the date on the
6 policy itself.

7 It was also clear though as I was reviewing these
8 records that a lot of this treatment had preceded that date,
9 and a lot of the medication discontinuation had preceded that
10 date by many years. So I just wanted to indicate my assumption
11 that this looks like this process had been sort of going on for
12 some period of time.

13 My second assumption is that really in order to get
14 one of these medications that there had to be a form, an MWAP
15 request form that was filled out, and that it was circled up to
16 the regional medical director for ultimate approval on that. I
17 outlined who those folks were in the records that I reviewed.

18 I also assumed that in some instances the chief
19 medical officer were able to review those forms as well, just
20 really who was the decision maker with regards to the ultimate
21 decision about terminating medication or issuing medication.

22 I made an assumption with regards to reassessment,
23 which was the process undertaken by DOCCS in the fall of 2020,
24 where providers were filling out these chronic pain and MWAP
25 reassessment forms, that they were really only instructed to

N96Ball1

Carinci- Direct

1 view one year of the patient's medical records at the time they
2 were doing it.

3 I assumed that patients in DOCCS's custody could not
4 arrange their own specialty visits. I also assumed that those
5 FHS1 entries that I reviewed were not in the chart, and they
6 were maintained in a separate database.

7 I assumed that in most instances the RMDs did not have
8 access to the patients' charts, only that FHS1 system, and
9 really those were my main assumptions.

10 Q. Why do you disclose assumptions in an expert report?

11 A. Well, I think I want to set the stage for my background and
12 understanding as I put the report together, sort of where I was
13 coming from.

14 I think it's always important when you're evaluating
15 data to provide the assumptions as you're interpreting that
16 data so that we're all on the same page.

17 Q. So I'd now like to turn to your opinions. Let's do this.
18 Why don't we start with the standard of care just cause I think
19 it lays a nice landscape for then your opinions and conclusion.

20 Could you please explain to the Court your expert
21 opinion of the standard of care for the treatment of chronic
22 pain?

23 A. I'm sorry. I was just flipping through the report. Can
24 you ask the question again.

25 Q. I can. Can you explain to the Court in your expert opinion

N96Ball1

Carinci- Direct

1 what is the standard of care for the treatment of chronic pain?

2 A. Well, the standard of care is what would a reasonably
3 prudent physician do under the same or similar circumstances.

4 Q. Can you expound on that?

5 A. Well, certainly. I think if we're talking about, I think
6 to be more specific with this case, we're talking about
7 individualized patient assessment is critical to the standard
8 of care, particularly with the practice of pain management.

9 No two patients are the same. And importantly when
10 we're talking about medications, no two patients will respond
11 in the same way to a given medication, and they may have
12 different outcomes. They may have different side effects.

13 And so I think the practice of pain management is one
14 where individual patient assessment is really paramount to
15 effective treatment. And that I think is really the basis of
16 the standard of care here when we're taking about the practice
17 of pain management.

18 THE COURT: Doctor, can I ask you to slide in a little
19 closer to that microphone, please.

20 THE WITNESS: Yes.

21 Q. And that term I think you just mentioned twice,
22 "individualized assessment," did you make that up?

23 A. No. I mean this is generally what we speak about in pain
24 management. As early as my training I can remember speaking
25 about individual patient assessment being critical, even as far

N96Ball1

Carinci- Direct

1 back as medical school.

2 Q. Can you tell me, sir, does -- I think you mentioned it, but
3 let's pretend we have two patients that suffer from the same
4 basic diagnoses, are you going to prescribe the same treatment
5 plan for those two patients?

6 A. No. And again it comes back to individual patient
7 parameters. So as we all age, we all develop different medical
8 comorbidities or medical conditions.

9 On top of that, we may have different medications that
10 we're already taking that may be contraindications to certain
11 prescribed medications. So two patients may have the same pain
12 problem; for instance, but have very different underlying let's
13 say substrate, which would be important in determining what
14 medication to pursue.

15 So they may have medical comorbidities that would
16 preclude certain medications. They may also have medications
17 that they're taking which would have drug-drug interactions.
18 And then on top of that, there is an area of medicine called
19 pharmacogenetics where just genetic, we're all different
20 genetically. We metabolize and respond to medications
21 differently, so you simply cannot treat every patient the same
22 just based on the type of pain condition they're presenting
23 with

24 Q. And could a treatment that worked for a patient in any
25 given year, would that always work for that patient in every

N96Ball1

Carinci- Direct

1 instance?

2 A. No. I think things -- it's dynamic. It's a dynamic
3 process, and that's why follow-up visits, regular checkup
4 visits are important in my specialty.

5 In particular, people can develop tolerance to certain
6 medications where certain doses are no longer effective, and we
7 do need to titrate the medication or increase the dose to
8 respond to that tolerance.

9 In other instances, patients may over time develop
10 other medical conditions that would -- for instance, a very
11 common one is kidney failure or kidney disease that would
12 prevent the metabolism of the medication and potentially could
13 be harmful if you maintained them on the same dose or if you
14 continue that same medication.

15 And just to kind of bring it back in a more succinct
16 manner -- and I don't mean to be so long-winded. My point is,
17 pain management is an area where it is critical to look at the
18 patients at individuals for the reasons I outlined; otherwise
19 you're going to end up with ineffective care, and at worst
20 potentially harmful care.

21 Q. What about documentation of a patient's medical history,
22 where does that lie within the standard of care?

23 A. Yes. I mean certainly I would say right next in line after
24 individualized assessment and documentation is critical. Not
25 only for your own knowledge about the patient, but if the

N96Ball1

Carinci- Direct

1 patient should be seen by another provider or out-of-state
2 provider or be transferred to a facility or a hospital, if your
3 documentation is poor, the next person treating the patient is
4 going to be at a significant disadvantage for treating the
5 patient appropriately and potentially at risk for harmful
6 treatment simply because they didn't know the critical elements
7 of that patient's history.

8 And so documentation is really the essential
9 ingredient in the standard of care because without it, you're
10 operating in a vacuum and that is potentially harmful.

11 Q. And did you find anything about the documentation of the
12 medical history of these patients that you believed deviated
13 from the standard of care?

14 A. Well, yes. I think there was a number of issues with
15 regards to the documentation. I think importantly a lot of
16 their record is just handwritten notes, and I think we can all
17 understand the nature of handwritten notes that could
18 potentially lead to confusion, illegibility. Someone, the next
19 person, may not understand what was written there. Paper
20 charts can be lot, pages can be missing. So I think that's one
21 issue, is the nature of a handwritten note is prone to error.

22 On top of that is, in this case, what I noted as a
23 sort of unfortunate theme is that some of these claimants would
24 rotate from one facility to the next for whatever reason. They
25 would be transferred from facility A to facility B.

N96Ball1

Carinci- Direct

1 And when they got to facility B, either some or none
2 of the medical record would go with the patient. And so the
3 next provider in line would, as I mentioned earlier, would be
4 starting from scratch again, where they don't know the history.
5 They don't know the diagnoses, importantly they don't know what
6 medications or doses that the patient was on; or that
7 importantly, again in this case, what had been tried and failed
8 before.

9 And so it really just created a nostrum f confusion,
10 and I think led to those issues that I outline in the report.

11 MR. NOLAN: Your Honor, I just want to preserve an
12 objection for the record. To the extent that Dr. Carinci is
13 testifying to anything outside the scope of his report, we
14 would move to strike that. I believe some of what he just said
15 about the transfers was not in his report, but I'm not going to
16 make him go through it now.

17 MS. AGNEW: We are discussing the documentation
18 section of his report, your Honor. And sitting here right now,
19 I don't know if it talks about the transfers, but I could
20 certainly discuss that more in depth with Dr. Carinci because
21 appended to his report were 25,000 pages of medical records.

22 THE COURT: I'm not sure what you're asking me to do
23 at this moment, Mr. Nolan.

24 MR. NOLAN: I guess it would be reasonable to preclude
25 any testimony that goes outside the scope of his report.

N96Ball1

Carinci- Direct

1 THE COURT: I'm not sure that this does.

2 MR. NOLAN: There's nothing in this report that I can
3 see that talks about transfers from one medical facility to
4 another, and he just talked about that.

5 THE COURT: My recollection -- and I don't purport to
6 have memorized all of this, but my recollection is that some of
7 the individuals who are discussed in the report did speak about
8 transfers from one facility to another.

9 MR. NOLAN: Right. But this report is dated March 5,
10 2022, and the individuals who talked about transports weren't
11 talking about the time period before March 5, 2022, that we
12 know of.

13 THE COURT: I'm not sure it has to be a transport that
14 was discussed in the report or was at the time. I believe the
15 testimony the doctor just gave was generalized testimony
16 applicable to most situations.

17 MR. NOLAN: Again, it's outside the scope of his
18 report. If he's going to give --

19 THE COURT: Are you moving to strike it or not?

20 MR. NOLAN: Yes.

21 THE COURT: Denied.

22 MR. NOLAN: Thanks.

23 BY MS. AGNEW:

24 Q. Dr. Carinci, so beyond the medical records when we talk
25 about the standard of care, what about the assessment of the

N96Ball1

Carinci- Direct

1 patient itself as recorded in medical records?

2 A. Yes. Assessment goes back to documenting subjective and
3 objective findings. And again when we're talking about an
4 evaluation of the patient, we're talking about an in-person
5 examination with a -- again to be specific with our are of
6 specialty here, a musculoskeletal and neurological examination.

7 On top of that when we're talking about the practice
8 of pain management and understanding, is a medication effective
9 for someone, we want to be able to document what they're pain
10 score is, what their function is, any side effects. We want to
11 be able to talk about the location of the pain, exacerbating or
12 relieving factors.

13 And all of these things are -- they're sort of
14 interrelated. There's the individual assessment, and then
15 there's the documentation piece. And then there's an actual
16 medical record that consistent and moves forward in time with
17 the patient as not having to be recreated at each visit. All
18 of these are interrelated in terms of the standard of care in
19 actually examining the patient.

20 If you were going to be examined by a physician, you
21 would want the same level of rigor that you're not having to
22 recreate the same story over and over again.

23 Q. And what was your general impression reviewing the medical
24 records that you studied of the quality of the assessments as
25 reflected in the records?

N96Ball1

Carinci- Direct

1 A. Generally the assessments I would say were poor.

2 Q. And why is that, sir?

3 A. They were often very superficial. They often did not
4 integrate the subjective and objective findings. There was no
5 evidence that there often times was any sort of physical exam
6 performed to corroborate the subjective and objective
7 complaints.

8 And for those reasons, I would consider that to be a
9 poor assessment.

10 Q. Let's talk about in the standard of care for the treatment
11 of patients with chronic pain management issues, the importance
12 or irrelevance of substance abuse history?

13 A. Certainly that's an important factor. The human condition,
14 people will unfortunately abuse anything really that they can
15 get their hands on sometimes.

16 And so knowing that there are certain medications that
17 have a predisposition to abuse is important. Also consistent
18 with that is knowing the patient's history, did they have a
19 personal history of abuse of substances, whether illicit or
20 prescription; is there a family history. Those are risk
21 factors. Because ultimately, again, we don't want to create
22 another problem on top of trying to solve one problem, which is
23 pain, and then create another problem which is fueling and
24 addiction process. So absolutely we would want to know that.
25 It is important.

N96Ball1

Carinci- Direct

1 On the other hand, a remote history of abuse is not an
2 absolute contraindication to prescribing medications with abuse
3 potential. And people with a history of abuse are routinely
4 prescribed medications with abuse potential, and I do that in
5 my own practice. I think importantly though, there's a level
6 of monitoring that may need to be more aggressive in those
7 instances. Where, like in the outpatient world, for instance,
8 we may not want to give a month prescription at a time.

9 We may see them more closely, perhaps every week or
10 every two weeks while we're titrating the medication to ensure
11 that, again, the patient is staying compliant on the regimen;
12 that there's no issues. That, again, we're not creating harm.

13 Just to be more succinct on this, yes, it's a very
14 important parameter when we are considering prescribing a
15 medication with abuse potential, but it is not an absolute
16 contraindication to doing so.

17 Q. And you used the term "remote," and I just want to ask you,
18 is there some kind of bright line about how remote a substance
19 abuse history has to be, how close in time where it becomes
20 preclusive?

21 A. Well, let me say this -- and I'm not someone who prescribes
22 like substances with abuse potential for someone who has an
23 active addiction process.

24 If I knew that the patient in front of me had an
25 active addiction to opioids, I think it would be very

N96Ball1

Carinci- Direct

1 problematic and really concerning to provide ongoing opioids to
2 that patient. But an active addiction is very different than a
3 history of remote addiction. And remote really can be anything
4 other than an ongoing active addiction.

5 So, yes, once you have a history of addiction, you're
6 always at risk for potentially doing it again; but with close
7 monitoring and supervision, many of these patients can
8 consistently stay on these medications in a safe manner.

9 Q. I want to ask you are about -- you are a specialist,
10 correct, sir?

11 A. Yes.

12 Q. And you provide what we would call general medical care to
13 patients, like my family practitioner?

14 A. No.

15 Q. When you looked through these records, could you tell the
16 Court what you perceive to be the role of this specialist?

17 A. Well, the specialist's job is to often times answer a very
18 specific question about a subset of the patient's medical
19 history.

20 So, for instance, I'll just be specific with my
21 specialty. I receive referrals from both primary care doctors
22 like you're referring to, and from other specialists outside of
23 my area of specialty, so say an orthopedic surgeon.

24 And the request is generally very specific. It may
25 come in for a specific body part, a specific pain condition, or

N96Ball1

Carinci- Direct

1 even a specific question with regards to a medication. But a
2 referral is made with the understanding that if I'm sending out
3 a referral, I'm asking for help. I'm not sending someone to you
4 because I don't want to take care of the patient anymore. I'm
5 sending them to the specialist because I need assistance.

6 I'm asking either a particular question, or I'm asking
7 for assistance in a particular condition. And so the role of
8 the specialist is to provide a very focused answer to a request
9 or problem, as opposed to a general practitioner who may be
10 dealing with five or ten different issues on a more superficial
11 level. The specialist is going to delve deep into the
12 specifics of a particular issue.

13 Q. When you review the records of the patients that you talk
14 about in your study, did you find that their appointments with
15 specialists mimicked your own experience?

16 A. I think it mimicked it in terms of providing -- what I do
17 is, I examine the patient, and I provide a succinct answer
18 about the condition.

19 So if the questions is, is X, Y and Z medication
20 appropriate, I would provide a specific answer for that. If
21 the question is, Can you provide some guidance on the
22 management of this patient's diabetic peripheral neuropathy,
23 we'll provide an answer there. So the role of the specialist
24 is to provide the answer. And I did note that the specialist
25 consultations were fairly succinct and provided an answer.

N96Ball1

Carinci- Direct

1 Q. And did you find that those specialty consultations were
2 generally followed by the practitioners back in the facilities?

3 A. Generally followed, no. I think in most instances there
4 was confusion.

5 And I think it's important to understand who was
6 following them. It seem like the front-line providers were
7 trying to follow them. And the front-line provider would be
8 the person who filled out the MWAP request form. I'm using a
9 generic term "front-line provide." I don't know if they're
10 refer to as primary doctors or front-line doctors, but the
11 person who is filling out the MWAP request form would often try
12 to follow the recommendation.

13 So, for instance, if the recommendation was restart
14 gabapentin, the front-line provider would fill out the MWAP
15 request form with the requested gabapentin following specialist
16 recommendation.

17 When it got to the level of the regional medical
18 director, there was just a systematic issue there where that
19 regional medical director, first off, didn't have access to the
20 specialist recommendation. I think broadly speaking they
21 didn't have access to the patient's chart even. They definitely
22 didn't have access to the patient. And they were really making
23 these decisions in a vacuum unfortunately without the critical
24 necessary information to be able to determine, is it indicated
25 or not.

N96Ball1

Carinci- Direct

1 So to answer your question, no, they weren't being
2 followed by the regional medical directors in general.

3 Q. Let's now turn, sir, to the conclusions in your report,
4 start on page 42 of the expert report. And I'd like to walk
5 through those. Let's talk about the MWAP policy itself. Did
6 you review that?

7 A. Yes.

8 Q. Did you find that the MWAP policy itself followed the
9 standard of care?

10 A. I don't have an issue from a standard of care perspective
11 with the MWAP policy. I don't agree with it in its entirety.
12 We can delve into that, but, no, I don't think the policy
13 itself was below the standard of care.

14 Q. Why don't you tell me what your disagreements were with the
15 policy as written or your concerns?

16 A. I think the policy overstepped the potential or the
17 potential abuse liability of certain medications that were
18 within the policy, and it sort of lumped all of them in a large
19 bucket where there's varying degrees of abuse liability.

20 For instance, there's many medications in there
21 including some of these culprits that came up again and again
22 in this particular litigation with regards to gabapentin and
23 Lyrica where the abuse liability of the medications is
24 exceedingly low, and really based on a lot of different
25 factors.

N96Ball1

Carinci- Direct

1 And I think that's where I think this policy sort of
2 went astray where it oversold the abuse liability of some of
3 the medications that were within the policy and essentially
4 prevented people from getting them.

5 Q. Let me ask you, cause they're going to, are you an expert
6 in correctional healthcare?

7 A. No.

8 Q. Have you ever heard of the certification in correctional
9 healthcare?

10 A. I have not heard that.

11 Q. Do you believe sitting here today that there is a specialty
12 where someone could be board certificated in correctional
13 healthcare?

14 A. I have not heard of it.

15 Q. When you talk about these culprits, and I think you
16 mentioned gabapentin and Lyrica, could you talk to me about
17 some of the things you found that would -- strike that.

18 Did you see any evidence of how those two drugs in
19 these kind of -- this family of drugs were administered in the
20 prison environment that made you feel better about their
21 administration?

22 A. I think, yes. My understanding, particularly let's say
23 gabapentin for instance, is in liquid form and is administered
24 as a unit dose when the patient presents for the medication.
25 That is in vast contradistinction to say the community where

N96Ball1

Carinci- Direct

1 when I provide gabapentin to a patient, they go to the pharmacy
2 and they receive -- it's many times it's a jar of 180 or 360
3 tablets of gabapentin all at once.

4 And so I think one scenario is very different from
5 another. If someone is given a jar of gabapentin and you're
6 concerned about the abuse liability or you have concerns about
7 the patient, that's a very challenging situation to present a
8 patient with 360 tablets of a medication, versus they present
9 to a window. They're monitored. They take a liquid dose.
10 There's really no opportunity to abuse that medication. They
11 can't take it with anybody other concurrent agents for like a
12 sort of sedative or synergistic effect. So I think, yes. Does
13 that answer your question?

14 Q. It starts to. Would your conclusion be that the
15 administration of these medications is much more controlled in
16 a prison environment than it is, per se, one of your patients?

17 A. Yes, absolutely. That's what I neglected to say. Yes.
18 The aspect of the prison environment where the patient presents
19 for a unit dose of liquid gabapentin is a much more reassuring
20 process than a patient in the outpatient world going back to
21 their apartment or home with 360 tablets of gabapentin.

22 Q. Would you as the treating physician know if your patient
23 then went and abused that large bottle of gabapentin?

24 A. I mean, you may or may not know that, right.

25 If the patient comes back requesting -- that

N96Ball1

Carinci- Direct

1 prescription was supposed to last them a month, and they come
2 back in a week and say they need more or they're requesting
3 higher doses or they're presenting in a very sedated format or
4 urine screen comes back showing a very high dose of gabapentin
5 in their system, those are concerns.

6 I will say -- and I've testified to this before -- is
7 that in my 15 years of practice, I have not had a patient that
8 I've been concerned about was abusing gabapentin. I've not had
9 anyone ask me for more gabapentin that I provided. I've not
10 had a scenario where somebody ask me to very early on refill a
11 dose that should have lasted them a month.

12 I have not had anyone with a failed urine screen for
13 gabapentin or concerns for selling it or a family member
14 reporting that they're overtaking it. So, again, this is just
15 my 15 years of practice with gabapentin which has been around
16 for a very long time not having concerns about it.

17 Q. And have you had concerns about other medications within
18 your practice being abused by your patients?

19 A. Yes, certainly.

20 Q. Can you just explain a little bit of that to the Court?

21 A. Well, I think opioids are the main issue in my specialty.
22 And it's been -- it's a scenario of like a pendulum where in
23 the '90s, maybe the early 2000s opioids were more liberally
24 prescribed.

25 Now we're on a different scenario where opioids are

N96Ball1

Carinci- Direct

1 much more tightly controlled by primary doctors and specialists
2 and the like. And opioids have a very well-known very well
3 defined liability, abuse liability, a liking ring forcing
4 addiction sort of process.

5 And I think this sort of draws back to my earlier
6 statements with regard to the MWAP policy sort of lumping all
7 of these types of agents together is problematic. So, yes,
8 opioids are definitely abused. People do ask for early
9 refills. People do take more than prescribed. In my 15 years
10 of practice, I've had instances of people abusing them, taking
11 more than prescribed. All of those various infractions.
12 Having to discontinue patients from taking opioids, sending
13 people to rehabilitation because of opioid abuse. I mean these
14 are all real phenomenon. In contrast, I have not had any of
15 that with gabapentin.

16 Q. What about Lyrica?

17 A. I have not had that with Lyrica.

18 Q. Let's now move from the facial policy itself. What were
19 your conclusions about how MWAP was implemented at least
20 throughout the records of the 70 patients that you reviewed?

21 A. I think the big issue here is that how the MWAP was
22 implemented was done in a very broad stroke manner that was
23 non-individualized. So it was applied to patients in a manner
24 that did not take into account their individual picture
25 parameters.

N96Ball1

Carinci- Direct

1 So just bluntly, people were discontinued on their
2 medications without an individualized assessment. And so the
3 policy itself was implemented in a manner inconsistent with the
4 standard of care that we talked about earlier because there was
5 no individual patient specifics.

6 And really it's very clear when you look at how those
7 medications would be approved in this process because it was
8 the regional medical directors who essentially had the power so
9 to speak to give the thumbs up or thumbs down on these
10 medications, to say yes or no, and they simply didn't have the
11 ability to make an individualized assessment.

12 They didn't evaluate the patients. They had very
13 basic information about the patient. They had no access to the
14 patient's chart. And so for those reasons, it's not
15 conceivable that these were individualized assessments. These
16 were very non-individualized. It was implemented in a
17 non-individualize manner.

18 Q. Dr. Carinci, didn't the MWAP form that you reviewed as part
19 of your process and the compilation put together by my office,
20 wasn't there enough information on that MWAP form to make a
21 study considered decision based on the standard of care?

22 A. No.

23 Q. Why do you say that?

24 A. Because those forms lacked the information needed to make
25 the determination in an individualized manner.

N96Ball1

Carinci- Direct

1 For instance, with regards to specialist
2 recommendations, with regards to medications that had been
3 tried and failed, with regard to the efficacy. On hindsight,
4 those forms, those request forms, did not encompass that data.

5 Q. Let's talk about, within that you come to a conclusion
6 about the oversight of the regional medical directors and the
7 administrators over this MWAP implementation. Can you speak to
8 that?

9 A. Yes. It was a very haphazard confusing and chaotic
10 implementation and oversight. I think, for instance, on one
11 hand those first-line providers were provided literature,
12 articles and other forms of sort of "educational material" with
13 regards to these medications with abuse liability, such as
14 gabapentin and Lyrica; and what indications they would be
15 useful for and how to dose them and how to monitor them.
16 They'd be provided that information about how to utilize them.

17 But on the other hand, the actual use of these
18 medications was to the point where they were refused so often
19 that these front-line providers basically stopped asking for
20 them. So they would repeatedly ask for them. They would be
21 repeatedly denied, and it sort of left those front-line
22 providers sort of cycling back to the same three medications
23 that had been tried and failed over and over again. And that
24 would have been Ibuprofen, Elavil or amitriptyline and
25 Cymbalta.

N96Ball1

Carinci- Direct

1 So the oversight of this process was really just very
2 poor, not only was implementation, but also the ongoing
3 oversight of the process was chaotic and problematic.

4 Q. Did you see any evidence in the medical records you
5 reviewed that RMDs would then follow-up about the patient's
6 effective treatment after an MWAP was discontinued or denied?

7 A. No, I didn't see that.

8 Q. And you just talked about I think cycling through
9 alternative medications, can you expand on that for the Court?

10 A. Yes. So in lieu of a utilizing an MWAP medication, it was
11 understood that there were basically these three medications
12 that could be utilized without any degree of MWAP request form.

13 So you didn't have to request someone's authorization.
14 You didn't have to request the regional medical director's
15 input If you wanted to use Ibuprofen, amitriptyline or
16 cymbalta. So you would see again and again these attempts to
17 utilize those medications, those three medications as I
18 mentioned, when they had been tried and failed before. Even
19 when there was contraindications to utilizing those
20 medications. And so, yeah, it was just very problematic in
21 that sense.

22 Q. What does it mean for a drug to fail?

23 A. Well, a drug failure could take a number of different
24 meanings. One with regards to pain management would mean they
25 didn't provide efficacy. There was no analgesic or pain

N96Ball1

Carinci- Direct

1 relieving response with it. They were titrated up. It didn't
2 help. It was a failure. It didn't help the problem.

3 Another form of failure is intolerable side effects.
4 They were titrated up to a therapeutic dose, but it wasn't able
5 to be taken due to intolerance of side effects. That could be
6 nausea, could be dizziness, could take on a number of different
7 areas. That would mean failure.

8 I think also I would look at failure in a broader
9 sense also saying that if, you know, it's a contraindication to
10 utilize that medication, that's sort of also like a dead-end.
11 It's a failure. Going down that route would be a failure. for
12 instance if there's a drug-drug interaction with using that
13 medication or the patient has an underlying medical problem
14 that would preclude you from utilizing it then that would be a
15 failure to me. It takes one of those three forms.

16 Q. And you have a section in your conclusions at page 43 where
17 you talk about lack of knowledge about medications hurt
18 patients.

19 Where do you see evidence of that lack of knowledge,
20 and who in your conclusions lack the knowledge?

21 A. Well, the lack of knowledge sort of stem from seeing
22 patients that were reporting ongoing constipation, for
23 instance, horrible constipation that required multiple
24 medications to alleviate; or horrible urinary retention that
25 required catheterization to alleviate the urine.

N96Ball1

Carinci- Direct

1 And you would look back and realize that those
2 patients in some instances were actually being prescribed
3 Elavil which is a tricyclic antidepressant medication that was
4 one that was often posited as being, don't use an MWAP. Use
5 this. Unfortunately that medication is prone to having those
6 particular side effects. It's very prone to it.

7 And when you also have a patient who may be prone to
8 those potential issues due to underlying medical condition,
9 starting them on Elavil for instance would only worsen or
10 precipitate or exacerbate those underlying problems. So there
11 were instances where the patient would continually have to
12 self-catheterize to get the urine out, but they were also
13 repeatedly going up on the dose of Elavil.

14 So it was clear to me that that provider just didn't
15 understand that Elavil was a tricyclic antidepressant that was
16 going to cause this. I think that goes back to the oversight
17 in education part of this where they were repeatedly told to
18 use that and then you create an issue. So that was one of the
19 main issues that I saw there.

20 Similarly, things like cymbalta being prescribed to
21 people that were already on -- so cymbalta is a -- it is an
22 antidepressant medication. And in many instances patients were
23 being put on cymbalta when they were already on an
24 antidepressant for anxiety or depression. And they were being
25 told, let's put you on cymbalta for pain, when that would

N96Ball1

Carinci- Direct

1 really be an inappropriate thing to do because you could create
2 this drug-drug interaction with two antidepressants that are
3 going to precipitate either depression, could precipitate
4 mania. And again just not being monitored or really
5 understanding the potential downstream effects of those
6 medications.

7 Q. So let's talk about one of your culprits as you call it
8 gabapentin and what conclusion you came about regarding the
9 impact of gabapentin by the implementation of the MWAP policy?

10 A. So in many, many instances as I've outlined in my report
11 here through the 70 patients, the gabapentin was discontinued
12 without for non-medical records and without regard to the
13 individual patient parameters.

14 So you see many instances where patients were stable
15 on gabapentin for many years leading up to the institution of
16 MWAP. They were taking the medication. They were functional.
17 They had good analgesia. And really sort of without any
18 medical indication, the medications were titrated off,
19 discontinued, tapered down, substituted with amitriptyline or
20 some other medication like cymbalta without any medical
21 rationale and for non-medical reasons, and irrespective of
22 their individual patient parameters for use.

23 It's like we talked about, everyone responds
24 differently to these medications. And if you're lucky enough
25 to find a medication that does work for someone, it's really a

N96Ball1

Carinci- Direct

1 critical decision to discontinue that medication. You've got
2 to have a good reason because people could try for years to
3 find an effective medication. And so really, the decision to
4 taper off an effective medication is not to be taken lightly.
5 There's got to be an impetus to do so, a medical impetus
6 really, whether that's the patient developed a medical
7 condition that the medication is no longer safe for them.

8 They're on another medication like a chemotherapy
9 agent or something that's going to interact with the drug, and
10 so they need to be tapered off, and those are just particular
11 instances.

12 But my point is that in this case gabapentin was a
13 very common culprit here that was tapered off for non-medical
14 reasons, for no medical rationale was provided for why, and
15 really irrespective of the individual parameters of efficacy
16 and functional improvement on the agent.

17 Q. In your expert opinion would just the potential abuse
18 potential of a drug. Sorry. I just did that twice.

19 Would the abuse potential of a drug be a medical basis
20 absent other factors for discontinuing it?

21 A. No.

22 Q. Talk to me a little bit about that, like what is the
23 spectrum?

24 You touched on it, why would you just stop effective
25 treatment for a medical basis?

N96Ball1

Carinci- Direct

1 A. Well, for a medical bases, a perfect example is, someone is
2 on gabapentin. They're doing well with it. A medical reason
3 to discontinue would be they developed kidney failure. And
4 because gabapentin is metabolized through the kidneys. If your
5 kidneys are not working, you're going to accumulate massive
6 amounts of gabapentin and you're going to essentially be highly
7 sedated and potentially worse off.

8 So in those instances, we need to move to a medication
9 that is not metabolized through the kidney. We may need to
10 pursue some other route, but it wouldn't be gabapentin. So
11 that would be a medical reason to discontinue it, even though
12 it was effective.

13 Q. What about Lyrica?

14 A. Same thing. Lyrica and gabapentin, they operate at the same
15 receptor. Lyrica is a newer formulation of gabapentin
16 that's -- just to be simplistic with it, it's just a more
17 potent version of gabapentin. You can titrate people to a
18 higher dose quicker with less side effects, but the same
19 provisos with gabapentin would be applicable to Lyrica.

20 Q. And in your experience as an expert in pain management are
21 there patients for whom gabapentin or Lyrica alternatively work
22 better for that particular patient?

23 A. Yes.

24 Q. And so how would you as the medical provider come to that
25 conclusion?

N96Ball1

Carinci- Direct

1 A. Well, generally speaking we would start someone on
2 gabapentin first because it's generic. It's been around
3 longer. Most people's health insurance would want them to try
4 gabapentin before Lyrica. And it just makes sense because
5 gabapentin is generally well-tolerated by many. So we'll start
6 there.

7 We'll titrate people to an efficacious dose.
8 Hopefully we can get them there. If we reach either the
9 maximum dose without any benefit, or we get to a dose that is
10 not providing benefit or is having intolerant side effects,
11 then we would consider Lyrica. It's hard to know, maybe 30
12 percent of people will have efficacy with Lyrica versus
13 gabapentin.

14 Q. One of the other conclusions you touch on in your report
15 regards baclofen and muscle relaxants. Can you explain that
16 particular conclusion to the Court?

17 A. Yes. So baclofen is a medication that's used for
18 myofascial muscle spasms, muscle related pain. It's an
19 antispasmodic agent, but is not without harm.

20 Baclofen was also reverted to as the muscle relaxant
21 of choice. Again, even when it had been tried and failed, even
22 when there were reasons, medical reasons not to use it, when
23 there are many other muscle relaxants that are equally or in
24 some cases more efficacious with more side effects.

25 So the general sense in reviewing these records is

N96Ball1

Carinci- Direct

1 there was just this overprescription of baclofen when it wasn't
2 necessary to do so, and when there was even reasons not to do
3 it.

4 Q. And what would the alternatives to baclofen be in your
5 practice?

6 A. There is many other muscle relaxants to use. Some of them
7 are old. Some of them are new. Flexeril is one. Zanaflex,
8 Robaxin is another. Those are the main ones that we can
9 consider using.

10 And, in fact, I think most providers would reserve
11 baclofen later down the line after one of those other failed
12 because baclofen is so heavily sedating. And also once you're
13 on baclofen, you can't discontinue it abruptly. It has to be
14 tapered down. And that was again going back to the oversight
15 monitoring education part of this, you often saw the medication
16 just being tapered abruptly, not really understanding that it
17 is a medication where people could actually have a withdrawal
18 from it.

19 Q. In your experience though do these alternatives Flexeril,
20 Robaxin, forgive me for forgetting the other one, do those have
21 abuse potential?

22 A. No.

23 Q. None whatsoever?

24 A. Not to my knowledge, no.

25 Q. Have you ever had a patient in 15 years abusing Flexeril?

N96Ball1

Carinci- Direct

1 A. No.

2 Q. So now I want to talk to you about what you call in your
3 expert report the reassessment process.

4 First, to your knowledge, can you tell us how that
5 came to be?

6 A. Well, the reassessment process really was something that
7 came to be as a means to mitigate the effects from the
8 implementation, the poor implementation of the MWAP where many
9 patients were discontinued off their medications in this sort
10 of broad-sweeping non-individualized, non-medical manner.

11 The reassessment process was meant to sort of solve
12 the ills of that process. In other words, could we actually
13 sit down, reassess the patient, determine if there was a
14 medication they were functional with; and was there a reason to
15 discontinue it. And if not, can we consider reinstituting it,
16 or is there some other measure we can take here. So basically
17 to see if we can mend the wounds from the poor implementation
18 of MWAP.

19 Q. And did you have any role in that reassessment process?

20 A. Yes. Early on we met with some of the DOCCS I think
21 medical team in sort of putting together what we would consider
22 a reasonable reassessment process; how would we think about
23 reassessing; what are the components; and how should we do it.

24 And I was involved -- I think it was a zoom call if
25 I'm not mistaken -- with several participants with DOCCS.

N96Ball1

Carinci- Direct

1 Q. Can you tell me -- and those are not in your report, did
2 you design any documents to kind of guide that reassessment
3 process?

4 A. Yes, we had a -- it was a reassessment form I think we
5 called it.

6 Q. Would it refresh your recollection if we call those
7 treatment algorithms?

8 A. Yes.

9 Q. To your knowledge when you reviewed the records, were those
10 treatment algorithms used by the providers when they did these
11 reassessments?

12 A. Sometimes.

13 Q. So now I want to talk about your review of those
14 reassessments and what you found.

15 First, why don't you just explain to the Court what we
16 had hoped? What you had hoped and us as well would happen in a
17 reassessment?

18 A. So the reassessment was really designed to answer a very
19 specific question, and this really was, Was the patient on a
20 medication that was helpful; and was there a reason that that
21 medication was discontinued.

22 In other words, we wanted to refresh on the idea of,
23 like, where this patient is in time, relative to where they
24 previously were prior to the institution of the MWAP.

25 So, for instance, we would ask question -- that form

N96Ball1

Carinci- Direct

1 that you're talking about was really designed to guide the
2 practitioner in answering that question in a way that was
3 reproducible and was understandable for someone else who read
4 it.

5 And if at the end it was clear that the medication was
6 discontinued for a medical reason that was particular to their
7 individual circumstance, well then so be it, great. Let's move
8 on to the next person.

9 If on the other hand at the end of that analysis we
10 determine that there really wasn't a medical reason that this
11 medication was discontinued, there was really no individual
12 patient parameters that guided the discontinuation of that
13 medication, well then perhaps we can consider reinstituting it.
14 So that was really the point of the reassessment process was to
15 answer that question.

16 Q. To your knowledge was there only one sweep of
17 reassessments?

18 A. No, there was some of two waves of reassessment, July of
19 2020 and then it was sort of November fall of 2020.

20 Q. And to your knowledge were the reassessment forms in that
21 process used for both of those sweeps of reassessments?

22 A. No, it was used in the second.

23 Q. So talk to me about the first to your knowledge and what
24 you saw in the records?

25 A. Well, I would say the first wave of reassessments was just

N96Ball1

Carinci- Direct

1 fraught with problem right from the start. It doesn't seem
2 like the front-line providers who were performing those
3 reassessment really understood what the point of the
4 reassessment was.

5 Often times in the documentation there would be
6 various notations of data that were collected that were off
7 base relative to the question we're trying to answer here. So
8 there may be multiple documentation about lung studies and
9 pulmonary function test and lung medications, and no mention at
10 all of the gabapentin or the specialist recommendations or even
11 the pain of the patient. So it was clear that when you read
12 that reassessment it was clear when the person who did it just
13 didn't understand what they were being asked to do.

14 They just thought they're going in there to assess the
15 patient in a broad sense, like as a medical provider. I'm
16 going to address your multiple medical problems, opposed to
17 reassessment to the MWAP medication. And so that first wave of
18 reassessments was really just problematic for those reasons.
19 It was off-base. It didn't answer the question. Many times it
20 didn't mention pain medication. There was often not an exam
21 performed. So those were the issue.

22 Q. What about that second wave where we had the form, what
23 were your findings when you reviewed those documents?

24 A. The second wave I think was an improvement over the first,
25 but mostly because we provided a form that was to be filled

N96Ball1

Carinci- Direct

1 out, so that at least guided folks. But again I think the
2 education on what that form was designed to do and what
3 question we were trying to answer was again just off-base.

4 It was not a context sensitive evaluation. In other
5 words, the context being the MWAP policy and the institution of
6 the policy and the medications and pain management treatment
7 thereof, that was the context of why the form was being done.
8 But the forms were completed in a manner that was context
9 insensitive. Like they didn't recognize that, hey, in this
10 particular instance with this particular patient, it's all
11 about gabapentin.

12 The patient was on gabapentin. They were very
13 functional on it for such and such reasons. Here's the
14 objective data with regards to their subjective complaints, so
15 here's some X-ray findings. Here are some MRIs findings.
16 Here's a list of medications that they failed before and why
17 they failed them. Here's an examination of the patient. They
18 have weakness in the leg. They can't bend over, whatever it
19 is, musculoskeletal neurologic.

20 There's really no contraindication to restarting
21 gabapentin. The patient was functional on it, no side effects,
22 doesn't have an abuse history, never abused gabapentin or
23 anything else. Let's consider reinstituting gabapentin. I
24 know I'm sort of just glazing over the points, but that's what
25 we were sort of looking for a context sensitive evaluation that

N96Ball1

Carinci- Direct

1 answers the question.

2 Even with the use of that form it was just again a
3 somewhat chaotic analysis where elements of the histories were
4 missing. Elements of the medications that were really critical
5 to this whole process were missing, so it was hard to know
6 where the disconnect was, but there was clearly a disconnect.

7 Q. And why as a part of that process is the history of failed
8 medications important?

9 A. Well, for the reasons we outlined earlier. These
10 medications are not immediately effective. Many times the
11 agents we're talking about take many, several months really to
12 get up to efficacious level.

13 So when you got someone who has diabetic peripheral
14 neuropathy and burning pain in their legs and they've been
15 stable on gabapentin, the medication's discontinued. There's
16 no reason why, but they're started on amitriptyline, but we've
17 already documented that amitriptyline is a failure. As the
18 provider, you're not going to recognize for probably another
19 two or three months if the patient is actually willing to go
20 down this road again. So you're essentially just wasting time.
21 You're wasting the patient's time. You're wasting your time
22 going down a road that's already proven to be problematic when
23 you've already got an answer that is effective.

24 If you don't have a reason to discontinue that
25 medication as we discussed earlier, you're basically causing

N96Ball1

Carinci- Direct

1 harm.

2 Q. What about the physical evaluations of patients on those
3 reassessments?

4 A. For the points we touched on earlier, the physical
5 evaluation is critical because the job as the clinician is to
6 corroborate the subjective complaints with the objective
7 findings. And those objective findings come from the studies,
8 whether that's an MRI, an X-ray, an EMG what have you, and the
9 physical exam.

10 Because we're not just taking the patient's subjective
11 statements as a hundred percent fact without any corroborative
12 data, we're trying to integrate that, all of those data points
13 to come to a conclusion about the overall plan, assessment and
14 plan. And so without a physical exam, a documented physical
15 exam, you're basically only having a small portion of the
16 history of the subjective complaints available to you.

17 Q. Did you see good evidence within those reassessments of
18 physical evaluation?

19 A. Not routinely, no.

20 Q. Tell me something, the objective of those reevaluations,
21 was it just to put every patient back on an MWAP?

22 A. No.

23 Q. What was the objective?

24 A. As I said earlier, the objective was the context what we're
25 talking about. It was to answer the question. Was the patient

N96Ball1

Carinci- Direct

1 on an MWAP medication that was effective, and was it
2 discontinued for a non-medical reason and for
3 non-individualized parameters.

4 If the answer was yes to that and there was an MWAP
5 medication that we could identify that was effective, can we
6 consider reinstituting it; or is there a reason we can't. So
7 it wasn't that everybody needs gabapentin, that was not the
8 point of the reassessment period.

9 The reassessment period was the context of the MWAP
10 implementation, and we really wanted to answer the question as
11 I outlined earlier, were they on a medication that was
12 effective for them, and why was it discontinued. Is there a
13 medical reason or not and go from there, a path forward really.

14 THE COURT: Could I just ask a question, were the
15 reassessment done after the MWAP policy was withdrawn and at or
16 about the time when policy 1.24A was promulgated?

17 MS. AGNEW: No, ma'am. So the second swath of
18 reassessments took place around November of 2020. That's
19 borne out by the documents. DOCCS rescinded MWAP February 3,
20 2021. Somebody can correct me -- 8th. February 8th of 2021.

21 THE COURT: Thank you.

22 BY MS. AGNEW:

23 Q. Tell me this, when we're talking about the objective of
24 these reassessments, was the objective perfect analgesia? I'm
25 saying that wrong. You just gave me a look --

N96Ball1

Carinci- Direct

1 A. No. No.

2 Q. Was the objective to completely cure the patient's chronic
3 pain? Is that the objective?

4 A. No, and it never is in the process of pain management. It's
5 impossible to get perfect. You can't get the pain score to
6 zero.

7 And importantly here, there maybe instances where an
8 MWAP medication was not medically necessary or reasonable. It
9 wasn't about, again, everybody that step forward is a candidate
10 for MWAP and should be on it; but with a proper analysis and a
11 proper reassessment, we'd be able to answer that question in a
12 reproducible rigorous manner that was individualized.

13 Q. So tell me, sir, we created these data subsets which are
14 appended to your report --

15 MS. AGNEW: And, your Honor, Mr. Manly has three small
16 binders to his right. You might want to pass those up, and we
17 do apologize for the presentation. Your Honor, this report was
18 so big and huge, we've done our best.

19 Q. So I do want to talk about those exhibits, Dr. Carinci,
20 first I want to turn your attention to Exhibit 70. And again,
21 I know you touched on it briefly, but talk about how you looked
22 at the data from these 10,000 MWAP request forms?

23 MR. NOLAN: Real quick, is it P128?

24 MS. AGNEW: Yes. So 70 has been premarked, your
25 Honor, P128.

N96Ball1

Carinci- Direct

1 THE COURT: Yes, ma'am.

2 MS. AGNEW: I'm going to approach the witness and make
3 sure he has it.

4 Q. Dr. Carinci, Exhibit 70, was that one of the sources of
5 evidence you used?

6 A. Yes.

7 Q. And to your knowledge, where did that data come from?

8 A. This data came from the MWAP forms themselves.

9 Q. Did you review the MWAP forms themselves in their entirety?

10 A. Well, there was like 10,000 of these forms, so I wasn't
11 able to personally review each and every one of those forms,
12 but I had asked -- understanding that time was of an essence
13 here, if your office could put together a more condensed
14 version of those, pulling out the salient data and putting it
15 in a manner that I could read through it and understand the
16 themes, why they were denied, what was approved, what wasn't
17 and why.

18 Q. Is it your understanding when we pulled together this data
19 that it was pulled directly from the MWAP request forms
20 themselves?

21 A. Yes.

22 Q. Did you have an opportunity to spot check, but did you have
23 an opportunity to peruse through the MWAP request forms
24 themselves and kind of do a spot check against what we produced
25 to you?

N96Ball1

Carinci- Direct

1 A. Yes.

2 Q. Were they perfect?

3 A. No.

4 Q. Given that they weren't perfect, how did you use them
5 recognizing there might be some imperfection?

6 A. I looked for themes, understanding that, look, again, we're
7 talking about 10,000 of these forms, I wanted to get a sense
8 for broadly speaking how many were approved, how many were
9 denied, how long were they approved for, kind of just getting a
10 10,000-foot view.

11 Just like when I talked about with the patient
12 records, a starting point for digesting the material. It's
13 just impractical to delve into each and every of those 10,000
14 MWAP review forms and start taking my own notes on them. And
15 so the synthesis of this information as put together here in
16 Exhibit 70 was a means to digest that information in a more
17 efficient manner.

18 MS. AGNEW: Your Honor, I would like to move into
19 evidence Exhibit 70. It's Dr. Carinci's report. We premarked
20 it P128. We would like to do that as a 1006 exhibit, and we did
21 bring all of the underlying records which are in binders behind
22 if my colleagues wanted to review them or test the data.

23 MR. NOLAN: Your Honor, we object to the introduction
24 of this exhibit into evidence because it doesn't meet the
25 requirements of FRE1006.

N96Ball1

Carinci- Direct

1 In this Circuit in order for a summary chart or
2 summary of evidence, particularly one created by counsel, the
3 offering party has to establish a foundation connecting the
4 numbers in the chart with the underlying evidence for the data
5 on the chart. And the Court must ascertain that the summary
6 charts fairly represent and summarize the evidence upon which
7 they are based.

8 There has to be foundation testimony connecting it to
9 the understanding evidence summarize. We haven't heard a
10 foundation evidence who prepared these testify today.

11 THE COURT: Counsel.

12 MS. AGNEW: Your Honor, it's not our position that we
13 have to provide the actual person, but that he needs to
14 authenticate them, that they're admissible. And I would point
15 to the Court's order of March 1st of 2021 where we talked about
16 the admissibility of the underlying MWAP request forms. Cause
17 if the Court recalls, they were all produced to us in Excel
18 spreadsheets. You couldn't get to the data.

19 We then went ahead and converted them, and we had to
20 move for an order allowing their admission because state
21 defendants were concerned that we had played with data, which
22 of course we had not.

23 My understanding of 1006 is that Dr. Carinci having
24 spot-checked the data, which of course nobody could go through
25 10,000 forms and confirming its reliability and the fact that

N96Ball1

Carinci- Direct

1 it reflects what is on a spot check of the forms is a witness
2 who can lay the foundation, and then through which we can bring
3 in the summary.

4 THE COURT: May I see the prior order you preferred
5 to, please?

6 MS. AGNEW: Yes.

7 THE COURT: And is this document, Plaintiff's Exhibit
8 70, or Plaintiff's 128, is that the MWAP forms in the PDF
9 format that is referred to in the March 1, 2021, order?

10 MS. AGNEW: It is, your Honor those exact forms are
11 laid out here in about 25 binders.

12 THE COURT: Mr. Nolan.

13 MR. NOLAN: We have no objection to the MWAP forms
14 being in evidence, your Honor. It's the chart itself. We just
15 don't have any foundation. We don't even know who specifically
16 created it.

17 THE COURT: Can I hand you back the order that was
18 just handed to me, please.

19 MS. AGNEW: I can give him a copy.

20 THE COURT: Please do. Isn't this already ruled on?

21 MS. AGNEW: To be fair to Mr. Nolan, this does predate
22 his entrance into the case.

23 MR. NOLAN: I'm not seeing where it says that these
24 are admissible at trial.

25 THE COURT: Maybe read it. It talks about the

N96Ball1

Carinci- Direct

1 declaration from Mali Curran, C-U-R-R-A-N, at docket number
2 207, setting out the steps she took to convert the forms, that
3 is the forms received from defendants, into a readable PDF
4 format.

5 MR. NOLAN: I still don't know how that makes it
6 admissible at trial. Somebody submits a declaration, for
7 example, on a motion, it's still hearsay at trial.

8 THE COURT: Right.

9 MR. NOLAN: So we have no foundation testimony from
10 Ms. Curran here. We have no ability to cross-examine
11 Ms. Curran, or if that's who created it.

12 THE COURT: It seems to me that the declaration that
13 is reflected in the March 1, 2021, order does that; and at the
14 time, apparently the parties were fighting about whether or not
15 to admit this document.

16 MS. AGNEW: No, no, your Honor. I want the record to
17 be very clear. The fight among the parties was about the
18 admissibility of the MWAP request forms themselves. If counsel
19 wants us to admit all of those into the record, we're happy to
20 do it instead of this summary.

21 He suggested that's okay with him. We can do that.
22 Our expert of course could not go through all of those. We did
23 have -- and there's a declaration on the record from Sterling
24 Avellino. He is the one who extracted the data and created the
25 summaries that Dr. Carinci relied upon.

N96Ball1

Carinci- Direct

1 Dr. Carinci then spot-checked the summary data in
2 Exhibit 70 through 73 against the MWAP request forms to make
3 himself feel comfortable that it was an accurate reflection,
4 and he's laying the foundation that he then relied on that
5 data. We could also call Mr. Avellino. He's at school, but I
6 can get him on a video tomorrow and we can do this again. I'm
7 happy to do that as well, or we can go ahead and admit all the
8 MWAP request forms.

9 THE COURT: Would you hand up the Avellino
10 declaration. I know we just had it recently, but I don't have
11 it in front of me at this minute.

12 MS. AGNEW: Forgive me, your Honor, I did not print it
13 out.

14 THE COURT: Tell me the docket number and we will pull
15 it up.

16 MS. AGNEW: If we can go off the record for two
17 minutes.

18 THE COURT: Do you want to take a break now? We've
19 been going an hour and a half or so, is that a reasonable idea?

20 MS. AGNEW: That's great, your Honor. Thank you.

21 (Recess)

22 THE COURT: Have you had a chance to chat?

23 MS. AGNEW: We have not. I thought we were, so I'm
24 going to renew my motion to admit into evidence Exhibit 70 of
25 Dr. Carinci's report which we premarked P128. It is a summary,

N96Ball1

Carinci- Direct

1 although I'll state, if they have no objection to all the MWAP
2 request forms themselves, we'll do that. I think the record on
3 appeal is going to be painful, but we'll do it.

4 THE COURT: Let me ask you this question, what is the
5 relationship between P128 or Exhibit 70, and the PDF format
6 referenced in Ms. Curran's declaration versus the document
7 referenced in Mr. Avellino's declaration?

8 MS. AGNEW: Sure. So the binders back here, which
9 your Honor can't see. It's about 15 binders. Those contain
10 the documents Ms. Curran created. Mr. Avellino then pulled the
11 data from those documents to create the summaries that
12 Dr. Carinci relied upon; because if I sent him that many
13 documents, he would quit.

14 THE COURT: Mr. Nolan.

15 MR. NOLAN: Your Honor, with respect to Mr. Avellino
16 who we understand I think was the author of Exhibit P128, he
17 was subpoenaed to testify for a deposition. Your Honor, you
18 quashed that subpoena, without a motion. The parties never got
19 an opportunity.

20 THE COURT: I'm sorry. There were letters back and
21 forth.

22 MR. NOLAN: There were letters back and forth, but
23 there was no formal motion.

24 THE COURT: Let me say for the record, I took the
25 letters as a motion and a opposition.

N96Ball1

Carinci- Direct

1 MR. NOLAN: Fair enough, but it was ordered and it was
2 quashed. The parties never had the opportunity to depose
3 Mr. Avellino, so we would object to him even testifying.

4 THE COURT: My recollection of that exchange was that,
5 the question was what was the defect in the 1006 summary that
6 was to be the subject of the deposition. And there having been
7 none stated, there seemed to be no reason to order the
8 deposition. And that was, by my recollection, the finding that
9 was made.

10 If there is something else that counsel wants to
11 examine about to cast doubt on the accuracy of the Rule 1006
12 summary, then by all means, let's hear it.

13 MR. NOLAN: Respectfully, your Honor, I think sort of
14 the purpose of the exercise of deposing Mr. Avellino was to do
15 just that, to understand exactly the process he went through to
16 test his declaration, which would be standard in any discovery.
17 It was quashed. And now we're being told his declaration is
18 the foundation for his testimony. That declaration is hearsay.
19 It's inadmissible. It cannot serve as the foundation. That's
20 other objection.

21 MS. AGNEW: Your Honor, a couple of points. The first
22 is that it was state defendants who served the subpoena on
23 Mr. Avellino. It was not defendant Moores counsel, nor did
24 they, as far as I know, join in any motion or submit any letter
25 at all.

N96Ball1

Carinci- Direct

1 You are correct that it was about whether or not there
2 was a defect in the 1006. I think you gave Mr. Ramage every
3 opportunity on the record to enunciate those defects. He
4 couldn't come up with any, but you did reserve his right to
5 renew his subpoena should they come up with anyone. They
6 didn't.

7 But again, your Honor, we are happy to admit the MWAP
8 request forms. My only concern is about the record on appeal
9 and how voluminous that will be, but I will tell you the
10 plaintiff class would love to have those in the record. I think
11 the utility would be better to have the summaries, but what
12 your Honor decides we're going to be happy with.

13 MR. NOLAN: Separate issue of the MWAP request forms,
14 your Honor, I don't think we've gotten there yet in terms of
15 the testimony, was in fact brought to the Court's attention at
16 docket number 684 when Ms. Agnew filed a submission about
17 Dr. Hammer's deposition where Dr. Hammer pointed out the issue
18 that the MWAP forms were not accurate.

19 MS. AGNEW: No, that's not what he said. Your Honor,
20 just so the record is extremely clear, we created separate
21 binders by RMD.

22 So at Dr. Hammer's deposition, we put two binders down
23 in front of him that we believed to be Dr. Hammer's MWAP
24 request forms. What we found out is just because the face of
25 the form said Dr. Hammer, that doesn't mean he was the

N96Ball1

Carinci- Direct

1 reviewer. And in fact we were able then to identify
2 Dr. Hammer's request forms based on his initials, which he
3 would add to the end of his reviewer comments.

4 So the issue that arose in Dr. Hammer's deposition is
5 we could not with precision identify the actual RMD reviewer of
6 any given form. Dr. Carinci is not making a conclusion based
7 on who the specific RMD reviewer is. He's making his
8 conclusion based on the contents of the forms themselves and
9 whether or not they were approved or disapproved.

10 THE COURT: So with respect to the Dr. Hammer dispute,
11 would you refresh my recollection about whether the outcome of
12 that was?

13 MS. AGNEW: So what we did, your Honor, was we
14 reopened discovery so that state defendants could reproduce the
15 MWAP request forms to us based on the RMD's computer they came
16 from. So each RMD, as I understand it, when they process an
17 MWAP request form would save it on their personal desktop.

18 What happened is when the state defendants originally
19 produced those MWAP request forms, they threw them altogether.
20 They took the 10,000 forms from four different computers, threw
21 them altogether and produced them to us. I think all counsel
22 relied on the fact that the face of the form would say
23 Dr. Mueller, Dr. Hammer, Dr. Dinello.

24 What we didn't appreciate is just because the provider
25 put my RMD is Dr. Hammer, that didn't mean Dr. Hammer reviewed

N96Ball1

Carinci- Direct

1 it because he might have been on vacation. In which case, one
2 of the other RMDs would step in and do the review and write the
3 comments, so it was really a production issue. I'm not blaming
4 state defendants, but at the time no one appreciated what was
5 going on with the forms.

6 We then would, as we pulled the data, say this is a
7 Dr. Mueller form based on the face of the form. When we sat
8 down with Dr. Hammer he said, gosh, some of these aren't me. I
9 wouldn't have written that.

10 THE COURT: I got it. So Mr. Nolan, I'm not certain
11 what it is you're telling me about the Dr. Hammer situation
12 that bears on this issue.

13 MR. NOLAN: I guess I would in summary say we don't
14 necessarily believe there's any foundation for those. But if
15 they're moving to enter them now, that's not clear to me, but
16 if they are, I think the easiest way to deal with this if
17 they're concern about the MWAP forms in the record, for them to
18 produce Mr. Avellino to testify as to foundation on the Exhibit
19 128.

20 THE COURT: Why don't we do this then, we'll admit the
21 underlying forms and permit Dr. Carinci to testify as to the
22 documents subject to connection with Mr. Avellino.

23 MS. AGNEW: Your Honor, if we're admitting MWAP
24 request forms, I don't need Mr. Avellino, right, because we're
25 not entering the summaries.

N96Ball1

Carinci- Direct

1 THE COURT: To your point, we don't want to overburden
2 our friends across the street on the 17th floor. Let's do it
3 subject to Mr. Avellino's testimony, which hopefully can be
4 videoed in at a convenient time, but this will allow the
5 testimony to go forward this morning.

6 MS. AGNEW: Very good.

7 THE COURT: And if it turns out that the 1006 summary
8 comes in, then you people don't have to burden the Court of
9 Appeals with the MWAP forms.

10 MS. AGNEW: Your Honor, would I like to do is come
11 back with some exhibit numbers with those.

12 THE COURT: Certainly. You let us know how you want
13 to mark them.

14 MS. AGNEW: I will, and I'll come on the record a
15 little later today because we have a little work to do then.
16 Shall I proceed, your Honor?

17 THE COURT: Yes, ma'am.

18 BY MS. AGNEW:

19 Q. Dr. Carinci, I want to now talk about the actual MWAP
20 request form data that you examined and your conclusions based
21 on that data.

22 A. Okay.

23 Q. I want to direct your attention to your third subject
24 heading on page 40 where you talk about the MWAP request forms
25 themselves and your conclusions based on the data you saw

N96Ball1

Carinci- Direct

1 within the forms and/or the summaries that you examined.

2 A. Sure. So of those 10,000 request forms, as I talk about in
3 my report here, 6385 were approved. This is just sort of the
4 raw information.

5 2,866 of those approved were for medication
6 administration of 14 days or less; 3,519 approvals were for
7 prescriptions of 15 days or more. When you sort of track that
8 through the patients what became clear in fact was that these
9 were not approvals for medications that were continued for
10 months on end.

11 In fact, what it became clear was of those 14 days or
12 less, many of those MWAP approvals were for patients who had an
13 acute issue such as surgery or an injury, some sort of trauma,
14 and they were medications that were meant to only last
15 approximately two weeks. And so they were for acute pain
16 issues.

17 On top of that, those other approvals that were beyond
18 15 days, many of those were also for post-surgical pain for
19 instance; but more importantly many of those approvals were for
20 actually tapering the medications over multiple months. And so
21 whereas on the face of it, it may look like, okay, 3,519 MWAP
22 approvals for more than 15 days, if you actually started
23 tracking that through the patients that were provided these
24 approvals, it really was for tapering the medications down
25 month after month.

N96Ball1

Carinci- Direct

1 And so ultimately that face value of that data does
2 not indicate that all of those folks were maintained on an
3 MWAP. In fact, it means that the vast majority of them were
4 tapered over time when you actually tracked it through the
5 patients. So that was the value of that analysis of looking at
6 that data in a very 10,000-foot view, and then drilling down
7 the specifics of each of those patients to sort of track what
8 actually occurred with those MWAP request forms.

9 Q. And what about your conclusions regarding one of your
10 culprits as you put it, Neurontin and that's interchangeably
11 gabapentin just for the record?

12 A. It was a similar type of process. So as I outlined on page
13 41 there, 268 were female. Of the 1440 total Neurontin patient
14 requests, 833 were only made once, with 50 of those for female;
15 545 of those one time request were denied. The other 288
16 approved, but not again requested.

17 So I think it's the similar theme where we're seeing
18 these approvals and they will show up as an MWAP approval, but
19 that is not a testament to the fact that the MWAP process and
20 implementation was in fact providing these medications for an
21 ongoing basis. In fact, what it shows when you actually drill
22 into the data is that these medications were being approved for
23 tapering purposes.

24 Q. And then you have some conclusions based on your review of
25 that data about a phrase used repeatedly, insufficient medical

N96Ball1

Carinci- Direct

1 justification. Can you explain that to the Court?

2 A. Right. And so again in that summary sheet that we spent
3 sometime talking about, and then when I spot checked many of
4 these actual MWAP request forms, you would see this particular
5 phrase show up quite frequently. No medical documentation or
6 insufficient medical justification to refuse these medications,
7 when in fact the actual RMDs really didn't have access -- as we
8 talked about, really had no access to the patient, no access to
9 the patient's chart, no access to their history.

10 And really it was just unclear how that determination
11 was being made. It really wasn't substantiated by anything
12 specific to the individual patient. And so that was concerning
13 as I saw that. Importantly too, and I think I go on to talk
14 about it here. That was the next paragraph, the off label you
15 saw. I'll hold on that statement, but suffice it to stay with
16 the point we're making here is that the RMDs couldn't have made
17 individualized medical decisions without access to the
18 patients' medical chart or history.

19 So to say insufficient medical justification really is
20 not substantiated in the records available for review.

21 Q. And what about the off-label use that you just mentioned?

22 A. So another comment that came up fairly frequently was this
23 statement of not FDA approved or off-label use.

24 In medical practice, particularly in my specialty, you
25 know, many of these medications are used off label or not FDA

N96Ball1

Carinci- Direct

1 approved, so I think it's an interesting statement. It doesn't
2 really make sense in the context of clinical practice because
3 many of these medications are used in off-label manner and not
4 in an FDA approved fashion.

5 Just to take a step back so that my point of view is
6 clear, for instance, a medication may be FDA approved for a
7 particular condition only when there's been a specific clinical
8 trial that addresses a specific question. In other words, is
9 gabapentin more effective than placebo for diabetic peripheral
10 neuropathy.

11 If the results of a clinical trial do indicate that is
12 the case, then gabapentin will be FDA approved for diabetic
13 peripheral neuropathy. On the same token, however, in the
14 practice of pain medicine and the practice of medicine in
15 general, medications are often used off-label through just the
16 practice of medicine. And so, for instance, gabapentin where
17 it is not FDA approved for lumbosacral radiculopathy or
18 cervical spondylosis or any number of other conditions, it's
19 quite frequently used, and in many of the guidelines listed as
20 a first-line medication for those very conditions.

21 And so to state that the medication is not appropriate
22 because it's off-label or not FDA approved for that condition,
23 again is not consistent with the practice of medicine.

24 Q. As we expand on that, we mentioned earlier the repeated
25 prescription of a medication like cymbalta. Is cymbalta FDA

N96Ball1

Carinci- Direct

1 approved for the treatment of neuropathic pain?

2 A. It's hard to know now because there's always updated
3 studies. My understanding is that it is not for neuropathic
4 pain, it may be for like musculoskeletal pain. But
5 nevertheless, the particular FDA indication for the medication
6 is not a reason to prescribe or not prescribe for a particular
7 condition.

8 In other words, these medications, just to be clear,
9 in the practice of medicine are utilized off-label for many,
10 many indications, and not just in the realm of pain medicine.
11 In the practice of medicine in general, medications are used
12 off-label for treatment of various conditions.

13 Q. And now let's talk about your conclusion based on the data
14 pulled from the MWAP request forms. You say RMDs were not
15 following the standard of care. Can you expand on that?

16 A. Yes. As we talked about early on, one of the big issues --
17 let's back up for a moment and say what was the standard of
18 care with regards to the MWAP implementation. And that was
19 individualized patient assessment.

20 And it's very clear that the decision maker in this
21 process was the RMD. And for the RMDs to make these decisions,
22 they had no ability to ascertain the individual patient
23 parameters to be consistent with the standard of care. In
24 other words to be more specific, they did not have access to
25 the patient. They were not examining the patient. They did

N96Ball1

Carinci- Direct

1 not have access to the patient's medical record, and they had
2 minimal, if at all, patient specific data to make these
3 decisions. And so really all they had was the MWAP request
4 form that did not contain this relevant information.

5 And so for that reason, they're not following the
6 standard of care as we outlined earlier.

7 (Continued on next page)

N95Wall6

Carinci - Direct

1 BY MS. AGNEW:

2 Q. I just have a few more questions, and the first is, you
3 know, we talked a lot about the abuse potential of opioids
4 during the course of your testimony. Did you find that there
5 were patients within your 70-patient sample for whom opioid
6 treatment would be appropriate?

7 A. Yes, there were some patients.

8 Q. OK. Do you recall -- and you're welcome to refresh your
9 recollection -- the condition of those two patients and why in
10 that particular, those two particular instances it was
11 appropriate?

12 A. Yes. I'll be honest. The names escape me now, and I would
13 have to take time to review them, but I remember their history
14 was significant for sickle cell anemia. Sickle cell, you know,
15 just to sort of set the stage with regard to the problem, is a
16 condition that can be provoked due to pain. And so in these
17 particular instances -- I think in both cases -- the patients
18 were maintained on opioid therapy that managed to lessen the
19 frequency of these flares as well as control their baseline
20 pain. Unfortunately, as the medical records would indicate,
21 they were tapered off their opioid therapy, you know, really
22 despite multiple requests from the hematologists or the
23 specialists taking care of them to maintain them on opioid
24 therapy in order to prevent the exacerbation and the sickle
25 cell flares. And so in these two instances, you saw repeated,

N95Wall6

Carinci - Direct

1 you know, hospitalizations, repeated readmissions to the
2 hospitals for sickle cell crises due to poor pain control as a
3 result of their opioid therapy being tapered down.

4 And again, as a pain management provider, I understand
5 the implications of, you know, flagrant opioid prescribing, but
6 there are obviously patients that benefit from opioids in a
7 controlled fashion particularly when we document efficacy. And
8 to have a scenario where a specialist is repeatedly
9 recommending, you know, reinstituting an opioid regimen that
10 was found to be efficacious and, on top of that, seeing
11 repeated, you know, hospitalizations for sickle cell crises as
12 a result of insufficient pain, I think, was really a testament
13 to the misuse of the MWAP policy.

14 THE COURT: Insufficient pain or insufficient pain
15 treatment?

16 The record says, in the middle of your answer, "seeing
17 repeated hospitalizations for sickle cell crises as a result of
18 insufficient pain, I think, was really a testament to the
19 misuse of the MWAP policy."

20 Did you mean insufficient pain?

21 THE WITNESS: Insufficient pain management or poorly
22 controlled pain, to be clear.

23 THE COURT: Thank you.

24 BY MS. AGNEW:

25 Q. Dr. Carinci, finally, as we all know, one of the

N95Wall6

Carinci - Direct

1 justifications for the MWAP policy is the abuse potential and
2 abuse history of these patients. When you reviewed their
3 medical records, did you take that into consideration?

4 A. Yes, I did.

5 Q. OK. And where would you have seen that?

6 A. Well, that would have been in various areas. Certainly
7 within the context of the medical records. There were also
8 sort of urine drug screens or urine drug tickets or -- yeah, I
9 think they called them behavior tickets where these sorts of
10 things would be documented. But yes, those were apparent in
11 the records as well as the patients' history. It may indicate
12 prior history of drug abuse or substance abuse. And so, yes,
13 that was clearly something that was on my radar.

14 Q. OK. And I just want to make the record very clear. Did
15 you actually see the disciplinary tickets themselves or
16 references?

17 A. I don't recall seeing the tickets. I think these were just
18 references.

19 Q. OK. And Dr. Carinci, did my office -- was my office able
20 to provide you with the criminal histories of these patients?

21 A. Not that I recall.

22 Q. OK. Tell me something, Dr. Carinci. In conclusion, based
23 on your direct testimony, did you make any mistakes in your
24 report?

25 A. Yes.

N95Wall6

Carinci - Direct

1 Q. OK. Can you give me an example of a mistake you might have
2 made?

3 A. Well, I think, you know, just taking a step back for a
4 moment, this is probably the biggest report I've personally
5 ever written. You know, again, I did this myself. I did not
6 have any assistants helping me with this. I also understood
7 that there was an essence -- you know, time was of an essence,
8 given that there were people suffering here. And so there may
9 be some oversights in some of my summaries that I put together.

10 One particular one, I think, was fleshed out during my
11 deposition, where I had indicated that the provider had never
12 mentioned that the patient had myelopathy, which was true in
13 one of the reassessment forms but was clearly documented in the
14 second reassessment form. And so, you know, clearly I over --
15 it was an oversight by saying that it was never mentioned when
16 it was only mentioned in one of the two. That was one
17 particular issue that showed up in my deposition.

18 You know, there may have been other, you know, sort of
19 small either grammatical or, you know, documented a wrong dose,
20 or something like that. There could be many of them in a
21 report this size and given the voluminous records that I
22 reviewed.

23 I think the point is, however, that none of those errors
24 were systematic errors that would affect the overall conclusion
25 in this case. You know, whether that particular patient had

N95Wall16

Carinci - Cross

1 myelopathy or not is not going to alter the overall opinion in
2 this matter. You know, clearly we all strive for 100 percent
3 accuracy, but you know, again, when you're putting a report
4 like, of this size together, there's going to be some errors.
5 Again, I stand by the report. There's no systematic errors
6 that would affect the overall conclusion, however.

7 MS. AGNEW: Dr. Carinci, I've concluded my direct, and
8 I'm going to turn it over to my colleagues.

9 THE COURT: Thank you.

10 Cross-examination, counsel.

11 MR. NOLAN: Thanks, your Honor.

12 THE COURT: Yes, sir.

13 CROSS-EXAMINATION

14 BY MR. NOLAN:

15 Q. Good morning, Dr. Carinci.

16 A. Good morning.

17 Q. My name is Will Nolan. I'm one of the attorneys for Dr.
18 Moores, the chief medical officer at DOCCS. I've got some
19 questions for you today. OK?

20 A. All right.

21 Q. OK. First, we are going to go through some of your
22 qualifications and just make sure I understand -- and I think
23 counsel already alluded to this, that we'd be asking -- you
24 never worked in a prison before?

25 A. No.

N95Wall6

Carinci - Cross

1 Q. OK. You never worked in any correctional facility or
2 setting?

3 A. No.

4 Q. OK. Your experience with the correctional setting then is
5 based on your services in this case and one other. Do I have
6 that right?

7 A. When -- could you clarify what you mean by my services
8 particularly?

9 Q. The work that you've done with prisoners in an incarcerated
10 setting.

11 A. Well, I think, I mean I would separate out, like, the sort
12 of serving as an expert witness from serving as a physician.
13 As I've indicated, I have taken care of, you know, incarcerated
14 patients. But as an expert witness, yes, this would have been
15 the second case.

16 Q. OK. And the first case, was that *Medina v. Buther*?

17 A. Yes.

18 Q. OK. And that was in this court?

19 A. Yes.

20 Q. And other than this case and the *Medina* **case**, **do you have**
21 **any experience actually speaking or treating with prisoners who**
22 **are actually -- while they're in the correctional setting as**
23 **opposed to outside in your own office?**

24 A. Well, again, I guess I'm just trying to clarify, you know
25 when a prisoner is sent to my office for medical care, I would

N95Wall6

Carinci - Cross

1 consider that treating the patient.

2 Q. And when they're sent to your office for medical care, are
3 they being sent to your office in your capacity as a pain
4 management specialist?

5 A. Yes.

6 Q. OK. And when you're treating patients as a pain management
7 specialist, do you typically follow patients for a long period
8 of time, or do you see them only a few times as a consultant?

9 A. Generally, it's longitudinally over time, for long periods
10 of time, the majority.

11 Q. OK. You mentioned the *Medina* **case before. I just wanted**
12 **to clarify. The attorney representing the plaintiff in that**
13 **case was Ms. Agnew, is that correct?**

14 A. Yes.

15 Q. **You were paid for your services in the *Medina* case?**

16 A. Yes.

17 Q. OK. How much were you paid?

18 A. I don't recall.

19 Q. OK. Do you know what the terms of your compensation were?

20 A. Yes.

21 Q. And what were they?

22 A. You mean, like, an hourly rate?

23 Q. Sure.

24 A. \$800 an hour.

25 Q. OK. Do you have an idea of how many hours you spent on

N95Wall6

Carinci - Cross

1 that case?

2 A. I don't. I'm sorry.

3 THE COURT: I'm going to ask you to slide in a little
4 closer to the microphone again, please, sir.

5 THE WITNESS: Oh, sure.

6 BY MR. NOLAN:

7 Q. How about this case; are you being compensated for your
8 time?

9 A. Yes.

10 Q. OK. And do you know how much you've been paid to date on
11 this case?

12 A. In the order of about 50,000, I think, over approximately
13 three years.

14 Q. And what are the terms of your compensation; by hourly
15 rate?

16 A. Some is hourly. You know, record review, phone
17 conversations, Zoom meetings, those sorts of things are hourly.
18 There's other things, like deposition -- well, deposition
19 testimony was hourly as well. But court appearance or when I
20 went out to examine some of these claimants, those are more
21 flat-rate fees.

22 Q. When you're charging an hourly rate for this case, what was
23 the rate?

24 A. 800.

25 Q. OK. And the flat fees?

N95Wall6

Carinci - Cross

1 A. Well, for today, testifying is 12,000.

2 Q. And to be clear, with respect to your areas of expertise,
3 are you an expert in treating addiction?

4 A. No.

5 Q. OK. Have you served on any corporate boards, scientific
6 advisory boards of any type?

7 A. Yes.

8 Q. And can you identify those for us?

9 A. They would have been listed in my CV. It's not something
10 I've done in probably the last five or six years, but in the
11 past I was asked, primarily when I was at, you know, Harvard
12 and MGH, to participate in a medical advisory board, which was
13 essentially just a meeting of physicians from around the
14 country to review data with regards to new medications and to
15 offer your opinions about what you felt were -- did this
16 medication have an applicability for patients?

17 Q. OK. And was one of the boards that you sat on Mallinckrodt
18 Pharmaceuticals?

19 A. Yes.

20 Q. You sat on that board from 2013 to 2014?

21 A. No. This was just a one-time meeting.

22 Q. OK.

23 THE COURT: I think the question was: "And was one of
24 the boards that you sat on Mallinckrodt Pharmaceuticals,"
25 right?

N95Wall6

Carinci - Cross

1 MR. NOLAN: Yes.

2 THE WITNESS: And my answer was yes.

3 BY MR. NOLAN:

4 Q. And did you sit on that board in 2013 and 2014?

5 A. No. I think the way you're interpreting that from the CV
6 is that was the academic year. But it's -- it was just a
7 one-time meeting. This is not like I was on a board that met
8 consistently. These scientific advisory boards are essentially
9 one-time meetings, where there might be a specific date where
10 we all met at a conference table; might have been a hundred
11 doctors that were there.

12 Q. Did you get paid for that?

13 A. Yes.

14 Q. Do you recall how much you got paid for your work with
15 Mallinckrodt?

16 A. No, I don't.

17 Q. Mallinckrodt is a pharma company, correct?

18 A. Yes.

19 Q. And it's one of the biggest manufacturers of opioids in the
20 U.S., right?

21 A. I don't know about that.

22 Q. Does it sell or market opioids?

23 A. I don't know.

24 Q. You don't know?

25 A. I don't know.

N95Wall6

Carinci - Cross

1 Q. OK. Do you know whether it sells fentanyl?

2 A. I don't know.

3 Q. How about Collegium Pharmaceuticals; did you sit on that
4 board?

5 A. Yes.

6 Q. And that's also a pharma company, correct?

7 A. I don't know if they're still in existence, to be frank,
8 but they were at least at one point.

9 Q. Did they sell and market opioids?

10 A. I don't know.

11 Q. Were you paid for your work for Collegium?

12 A. Yes.

13 Q. Do you know if they sold Xtampza?

14 A. Yes, they did.

15 Q. How about Cubist Pharmaceuticals; did you serve on the
16 scientific advisory board for Cubist Pharmaceuticals?

17 A. Yes.

18 Q. OK. And was that in 2012 and 2013?

19 A. Again, it's a one-time meeting. It was probably in that
20 academic year, 2012 to 2013.

21 Q. And were you paid for that work?

22 A. I don't recall.

23 Q. And do you know what they made, what pharmaceuticals?

24 A. I think it's a nonopioid agent, although I -- you know,
25 it's quite a while ago. I don't recall specifically.

N95Wall6

Carinci - Cross

1 Q. How about Covidien Pharmaceuticals; did you serve on a
2 scientific advisory board for Covidien?

3 A. I think that was the same with Mallinckrodt. I can't
4 recall specifically. This is probably going back a decade or
5 so at this point.

6 Q. OK. Were you paid for that work?

7 A. I don't recall.

8 Q. Did you serve on any board for Abbott Labs?

9 A. No.

10 Q. Did you do any work for Abbott Labs at any time?

11 A. I taught spinal cord stimulator implant classes. I think I
12 did one of those in, I want to say 2020, '21, possibly.

13 Q. Were you paid for that work?

14 A. Yes.

15 Q. And does Abbott Labs, to your knowledge, partner with
16 pharma companies to sell drugs?

17 A. No.

18 Q. You've served as an expert in litigation plenty of times,
19 right?

20 A. What do you mean by plenty?

21 Q. Well, how many cases have you testified in?

22 A. 12 case -- you mean in the court testified?

23 Q. Let me start with in court.

24 A. I think this is my 14th or 15th court appearance.

25 Q. OK. And how many times have you been retained to be an

N95Wall6

Carinci - Cross

1 expert?

2 A. Since 2009, over a hundred times.

3 Q. OK. And you provided an expert opinion in a case called
4 State of Ohio v. Frank Lazzarini, correct?

5 A. Yes.

6 Q. And Mr. Lazzarini was a doctor in Ohio, is that correct?

7 A. Yes.

8 Q. And you testified on his behalf or as his expert?

9 A. Yes.

10 Q. And he was accused of running a pill mill, is that correct?

11 A. Yes, he was.

12 Q. What's a pill mill, for the record?

13 A. A pill mill would be a practice that provides opioids
14 fairly indiscriminately, I think, if you're talking
15 particularly about opioids, indiscriminate without really
16 caring to treat the patient, just to provide the opioids.

17 Q. For that case you reviewed the medical records of
18 Mr. Lazzarini's pain prescriptions, right?

19 A. Could you ask the question again?

20 Q. You reviewed the medical records related to Mr. Lazzarini's
21 pain prescriptions?

22 A. Yes, I did.

23 Q. And you actually opined that all of the pain prescriptions
24 he wrote were medically sound, right?

25 A. That's not true.

N95Wall6

Carinci - Cross

1 Q. Mr. Lazzarini -- he was convicted in engaging in a pattern
2 of corrupt activity, telecommunications fraud, Medicaid fraud,
3 tampering with a record, grand theft, involuntary manslaughter,
4 aggravated drug trafficking, drug trafficking and illegal
5 processing of drug documents. Is that your understanding?

6 MS. AGNEW: Objection. I'm objecting to the relevancy
7 of the criminal conviction of a client of Dr. Carinci's.

8 THE COURT: Mr. Nolan.

9 MR. NOLAN: Well, I think it's relevant in that it
10 goes to bias and it goes to credibility.

11 MS. AGNEW: I don't know why Dr. Carinci's client's
12 conviction for criminal charges goes to bias or credibility.
13 There might be other ways to elicit testimony that meets that
14 mark, but I don't think this is it.

15 MR. NOLAN: Why don't I take a step back. I withdraw
16 the question for now, but I have more questions about that
17 case.

18 THE COURT: All right.

19 Off the record.

20 (Discussion off the record)

21 THE COURT: Mr. Nolan.

22 BY MR. NOLAN:

23 Q. In the Lazzarini case, Dr. Carinci, you opined that
24 Dr. Lazzarini exercised good medical judgment, correct?

25 A. In some of the cases -- in some of his patients, yes.

N95Wall6

Carinci - Cross

1 Q. And in fact, one of those patients was prescribed Percocet,
2 fentanyl, alprazolam and hydrocodone all in one day, is that
3 correct?

4 A. I don't know. Which particular patient? I mean you're
5 asking me something that's very generalized.

6 Q. Do you know whether Mr. Lazzarini is still a doctor?

7 A. I don't know.

8 Q. You also provided an expert opinion in Rhodes v. Fred W.
9 Albrecht Grocery Co., correct?

10 A. That does not sound familiar to me.

11 Q. That was an Ohio case?

12 A. Doesn't sound familiar.

13 Q. Do you recall Dr. Higley in that case?

14 A. I don't.

15 Q. You don't recall being retained by Dr. Higley?

16 A. No.

17 Q. Why was this on your CV?

18 A. That would not have been on my CV.

19 Q. OK. I want to talk about some of the assumptions in the
20 report that we talked about earlier, which is in the record as
21 P137. Do you have that before you?

22 A. I do.

23 Q. OK. Now, the assumptions that you made, and just looking
24 at the first assumption on the second page, that relates to the
25 MWAP policy, right?

N95Wall16

Carinci - Cross

1 A. Yes.

2 Q. And the second assumption also relates to the MWAP policy,
3 right?

4 A. Yes.

5 Q. And the third assumption relates to the MWAP policy?

6 A. Well, I think -- yes, it does. I mean all of this relates
7 to the MWAP policy.

8 Q. All of them relate to the MWAP policy. OK.

9 And are you aware that the MWAP policy was rescinded on
10 February 8, 2021?

11 A. Yes.

12 Q. Are you aware that it was replaced with a new policy?

13 A. I'm not.

14 Q. OK. So you don't know what any new policy would be called?

15 A. Correct. I do not know.

16 Q. And you were not retained to provide any opinion about any
17 medical care given to any inmates or prisoners or patients of
18 any type in this case under any new policy; is that fair?

19 MR. NOLAN: Objection, your Honor.

20 THE COURT: Basis.

21 MS. AGNEW: So, the medical records that Dr. Carinci
22 examined in some instances do go longer and go past the point
23 of the new policy. Dr. Carinci wouldn't know whether or not
24 that was in effect. But I want the record to be extremely
25 clear of that fact.

N95Wall16

Carinci - Cross

1 THE COURT: You don't object to that, do you, counsel?

2 MR. NOLAN: Well, I object to Ms. Agnew testifying for
3 him, yes.

4 THE COURT: Do you dispute the facts with respect to
5 the time period over which the medical records Dr. Carinci
6 looked at extend?

7 MR. NOLAN: I dispute that as evidence in any way to
8 support what she's saying so far based on Dr. Carinci's
9 testimony.

10 MS. AGNEW: Your Honor, I'll withdraw my objection.
11 Let's move on.

12 THE COURT: Yes, ma'am.

13 BY MR. NOLAN:

14 Q. But just to be clear, have you heard of a policy called
15 1.24A?

16 A. No.

17 Q. And just to be clear, you aren't here rendering an opinion
18 about anything to do with 1.24A, correct?

19 A. Correct.

20 Q. All of your opinions relate to the MWAP policy, which has
21 now been rescinded, correct?

22 A. Yes.

23 Q. Your report is dated May 5, 2022, correct?

24 A. March 5, 2022.

25 Q. Sorry. Yes. March 5, 2022.

N95Wall6

Carinci - Cross

1 And so it's fair to say that you concluded your review of
2 records before March 5, 2022, correct?

3 A. Well, I think, you know, the date of my report is the date
4 of my conclusions.

5 Q. OK. And do you know what the last date of the last dated
6 record you looked at in terms of all the medical records?

7 A. Not offhand, no.

8 Q. Was it dated 2021 sometime?

9 A. I don't recall without looking at the specifics.

10 Q. But you certainly didn't review any medical records that
11 dated after March 5, 2022; fair to say?

12 A. Correct.

13 Q. OK. And so you didn't render or come up with any opinion
14 that any group or class of patients -- well, actually, let me
15 take a step back.

16 One of the aims of your report was to determine whether the
17 MWAP policy injured patients through a deviation from the
18 standard of care. Is that fair?

19 A. Yes.

20 Q. And you were looking back at what the individuals -- when
21 you use the term "injured," which is right there on the first
22 page, that's past tense, right?

23 A. To an extent, past. But you know, keep in mind that I did
24 examine, you know, 17 of these individuals. So that would have
25 been current as well.

N95Wall6

Carinci - Cross

1 Q. And when you say current, that was in 2020 or 2021 that you
2 examined them?

3 A. Yes, the date of the examinations.

4 Q. OK. Not in 2022?

5 A. No.

6 Q. Not in 2023?

7 A. No.

8 Q. OK. And so your report also doesn't contain any opinion
9 that any group or class of patients were going to suffer any
10 future harm, does it?

11 A. Future as in from, like -- can you be more specific? What
12 do you mean?

13 Q. Well, you have the report in front of you. At any point in
14 time, did you opine in your report, is there anything there
15 that you see that suggests that anybody was in danger of
16 imminent harm of any type?

17 A. Well, I think, yes. I mean I would disagree with what
18 you're saying. Yes, there were. We talked about those two
19 sickle cell patients were repeatedly admitted. I would say
20 that those in particular were harmed.

21 Q. And what happened to those after the date of your report;
22 do you know?

23 A. I don't know.

24 Q. And you can't render an opinion as to whether they suffered
25 any harm after the date of your report; fair?

N95Wall6

Carinci - Cross

1 A. Correct. I mean I do know that many of these individuals,
2 as I outlined in my report, once they were released into the
3 community, were restarted on many of their efficacious
4 medications.

5 Q. So some of these individuals are no longer with DOCCS,
6 correct?

7 A. Correct.

8 Q. In fact, many of them are no longer with DOCCS?

9 A. I don't know.

10 Q. Do you know if any of them are still with DOCCS?

11 A. I don't know.

12 Q. When you refer to an injury through a deviation from the
13 standard of care, you're referring to the standard of care for
14 the treatment of pain conditions, is that correct?

15 A. Yes.

16 Q. OK. And can we agree that when we refer to standard of
17 care, we're talking about a benchmark or to measure whether a
18 medical provider is meeting his or her obligations to a
19 patient?

20 A. I'm not sure I would define it that way, but I think I'm
21 following you in general, yes.

22 Q. All right. But isn't it also true that when it comes to
23 the treatment of pain conditions, there is no recognized
24 standard of care?

25 A. No, that's not true.

N95Wall6

Carinci - Cross

1 Q. We talked about your work in the *Medina* **case earlier**,
2 **correct?**

3 A. I don't think we really talked much about my work. You --

4 Q. We recognized that you were an expert in that case,
5 correct?

6 A. Yes, sir.

7 Q. OK. You gave testimony in that case, correct?

8 A. Yes.

9 Q. And you appeared in this court and gave testimony, correct?

10 A. Yes.

11 Q. And that was on September 18, 2018 --

12 A. I don't recall.

13 Q. -- is that fair?

14 But you do recall testifying?

15 A. I do.

16 Q. And you swore to tell the truth?

17 A. Yes.

18 MR. NOLAN: I'm going to read from page 275, lines 4
19 through 8 of the transcript of that testimony, which, for the
20 record, is located at Dkt. No. 392 from the *Medina* **case**.

21 Q. You testified --

22 THE COURT: Can I just ask you what we're doing; are
23 we putting it in front of the witness? Or what are we doing
24 here, sir.

25 MR. NOLAN: I'm impeaching the witness with his prior

N95Wall6

Carinci - Cross

1 inconsistent statement.

2 THE COURT: OK. Are we going to put it in front of
3 him?

4 MS. AGNEW: Your Honor, I actually don't have a copy.

5 MR. NOLAN: There's nothing that requires me to put it
6 in front of him, your Honor. If you want me to put it in front
7 of him, I can, but I'm not required to.

8 THE COURT: All right. Well, I think you ought let
9 counsel look at it over your shoulder.

10 MR. NOLAN: Yeah, I think counsel's familiar with her
11 client's testimony.

12 MS. AGNEW: He's not my client, and I don't have it
13 memorized.

14 Can I take it?

15 MR. NOLAN: No. You can read it.

16 Q. You testified, did you not, that there's really no
17 standards of care for treatment?

18 THE COURT: Counsel, question, answer.

19 MR. NOLAN: Well, the question was: "Sir, are you
20 able to answer the question?"

21 You posed that to him, and he testified --

22 THE COURT: Counsel.

23 MS. AGNEW: I believe that --

24 THE COURT: Counsel.

25 MR. NOLAN: Your Honor, under the rules --

N95Wall6

Carinci - Cross

1 THE COURT: Two things. No. 1, talk into the
2 microphone or we can't have it taken down.

3 Two, you have to ask the question and give the answer
4 that you want to read.

5 MR. NOLAN: I will ask the question and give the
6 answer, and I'll let Ms. Agnew look over my shoulder.

7 MS. AGNEW: Wait.

8 MR. NOLAN: OK.

9 "Q. Is there any standard of care for keratoconus-related
10 pain?"

11 Answer --

12 MS. AGNEW: You have to read it all.

13 MR. NOLAN: Keratoconus-related pain.

14 "Ms. Agnew: Objection. The witness is not an
15 ophthalmologist, nor has he been qualified as one.

16 "Mr. Schulze: He is a pain specialist.

17 "The Court: Sir, are you able to answer that
18 question?

19 "The Witness: Well, there's really no standards of
20 care for treatment of really any pain conditions. That's
21 really a decision between the patient and the physician. There
22 are certainly guidelines, but I would hesitate to call any of
23 these standards of care."

24 Q. That was your testimony, correct?

25 A. Yes.

N95Wall6

Carinci - Cross

1 Q. Yet your report contains several pages in this case on
2 standards of care related to pain conditions. Is that fair?

3 A. Well, I think you're misallocating my opinion with regards
4 to conditions versus pain management. You know, you first
5 asked me are there standards of care in pain management. I
6 think that's a different question of is there standards of pain
7 management relative to particular pain conditions. I mean, you
8 know of course there are standards of care in pain management.
9 There may or may not be standards of care in particular pain
10 conditions. But I think both of my answers are consistent.

11 Q. OK.

12 A. I don't think that there's any evidence that they're not
13 consistent.

14 Q. OK. I'll now read from page'77 of your transcript in that
15 case.

16 "Q. Well, is it fair to say then there's not one standard of
17 care that should be followed in regard to keratoconus-related
18 pain, correct?

19 "A. Right, and as I said before, I would hesitate to use the
20 term 'standard of care' with regards to pain treatment. There
21 really are no specific standards of care relative to the
22 treatment of pain. It's more of a guideline-based,
23 physician's-based discussion."

24 Again, that was your testimony in the *Medina* case, correct?

25 A. Correct. And again, it is consistent with my current

N95Wall6

Carinci - Cross

1 position as well.

2 Q. It's consistent with your current position that there is a
3 standard of care; is that what you're saying?

4 A. What you're asking me about is a specific standard for a
5 specific condition.

6 Q. You said any pain condition.

7 A. Right.

8 Q. Thank you.

9 A. Any condition. But what I'm talking about is there are
10 standards of care in pain management. There are certainly
11 standards of care in pain management. There may or may not be
12 standards of care for particular pain conditions.

13 Q. Right, but in either case, the ultimate decision, right, is
14 the medical provider? Correct?

15 A. The ultimate decision for what.

16 Q. Whether to prescribe a particular pain medication.
17 Correct?

18 A. That's not -- are we talking about the standard of care, or
19 are you talking about general --

20 Q. That's my next question.

21 THE COURT: Would you be kind enough to let the
22 witness finish --

23 MR. NOLAN: Sure.

24 THE COURT: -- so that the reporter can get it down
25 before you start again.

N95Wall6

Carinci - Cross

1 MR. NOLAN: Sure.

2 Q. The ultimate decision as to whether or not to prescribe a
3 particular pain medication lies with the medical provider,
4 correct?

5 A. Yes.

6 Q. All right. And in this case, as I understand your
7 testimony, you're not suggesting that the frontline medical
8 providers as opposed to the RMDs have failed to meet any
9 standard of care, are you?

10 A. No.

11 Q. And you, as I understand it, found fault with the RMDs
12 themselves, not with -- just to say it another way, you found
13 fault with the RMDs?

14 A. Yes, in general.

15 Q. OK. And you found fault with them because they were the
16 ones that ultimately could provide or not provide the
17 medications, correct?

18 A. Yes.

19 Q. OK. Is that still the case?

20 A. Yes.

21 Q. Do you know whether the RMDs are still deciding whether or
22 not to prescribe medications?

23 A. I don't know.

24 Q. OK. And in this case, when you did your work, the RMDs
25 weren't the ones seeing the patients, right?

N95Wall6

Carinci - Cross

1 A. Correct.

2 Q. And so the paramount issue for you really was that the RMDs
3 were still the ones making the decisions with regard to
4 treatment with MWAP medications, right?

5 A. Yes, that was part of it.

6 Q. They didn't always have the medical records before them; is
7 that fair?

8 A. Yeah, I don't think they ever the medical records.

9 Q. But you were not making that conclusion with respect to the
10 frontline medical providers, right?

11 A. Correct.

12 Q. You don't know whether they had the medical records in
13 front of them at the time they were making decisions as to
14 whether or not to prescribe any medication?

15 A. I don't know.

16 Q. OK. And so when you're talking about the violation of the
17 standard of care in this case, it was the RMD process which
18 ultimately led to that opinion that you have?

19 A. Well, the standard of care, yes, comes back to the
20 implementation of the MWAP, which is really in the hands of the
21 RMDs.

22 Q. OK. We established that your report's dated March 5, 2022.
23 And just to be clear, you didn't review any medical records of
24 any patients on that -- that postdate that report, right?

25 A. I don't think so, no.

N95Wall6

Carinci - Cross

1 Q. OK. And you weren't asked to opine on any patient's
2 treatment after February 8, 2021, were you?

3 A. I don't think so.

4 Q. OK. And so you can't testify today as to the care and
5 treatment of any patients in DOCCS custody postdating your
6 report?

7 A. Correct.

8 Q. And you can't testify that, as of today, any particular
9 patient is getting the care they need or not?

10 A. I don't know.

11 Q. OK. And you reviewed medical information for, you said, 70
12 DOCCS patients?

13 A. Yes.

14 Q. And -- but you saw only 18 of them; is that fair?

15 A. Could you ask the question again? I got distracted.

16 Q. You actually examined 18 of them?

17 A. Yes.

18 Q. OK. What about the others; you didn't examine them?

19 A. No.

20 Q. OK. How did you select the 18?

21 A. I didn't select them.

22 Q. Who selected them?

23 A. I think Attorney Agnew in concert with the defense team.

24 Q. How about the other -- I'm bad at math -- other 52; you
25 just reviewed their medical records?

N95Wall6

Carinci - Cross

1 A. Yes. I did not examine those others.

2 Q. OK. And how were those others selected?

3 A. Those were -- those were -- I don't know exactly how they
4 were selected.

5 Q. Well, how did you determine that you were going to look at
6 those particular records?

7 A. That was the list of patients that was provided as a sample
8 of the population.

9 Q. OK. As I understand it, you found the number of documents
10 to be unmanageable. Is that fair?

11 A. Well, I don't know if it was -- I wouldn't say it was
12 unmanageable. I think I managed to get through the
13 documentation. I think unmanageable would have basically not
14 resulted in a report. I think -- I would say these were
15 voluminous records.

16 Q. OK. And if you'd just look at page 9 of your report, under
17 patient file review, section II, there's a subsection A. Do
18 you see where it says, "Due to the unmanageable number of
19 documents"?

20 A. No.

21 Q. Do you see that word?

22 A. Could you just point me -- how far down are you?

23 Q. Third line down of the paragraph in the middle.

24 A. OK.

25 Q. And you used the word "unmanageable" number of documents,

N95Wall6

Carinci - Cross

1 correct?

2 A. OK.

3 Q. So you did find the number of documents to be unmanageable,
4 right?

5 A. Right. I see the point you're making. I think, you know,
6 the way I'm interpreting your question to me, however, was,
7 like, unmanageable meaning like you couldn't actually get
8 through them in an efficient manner.

9 Q. OK. And to do it in an efficient matter, you had the legal
10 team create subsets of documents for you?

11 A. Yes. So, I, as I outlined here, asked that a summary be
12 created. I asked for particular information, nine bullet
13 points, as I mention here, information, that I wanted a
14 10,000-foot view of each patient with references to the
15 underlying medical records so that I could get a sense for the
16 patient, get a sense for the issues, again, not looking for any
17 emotive statements, not looking for any interpretation, just
18 raw data that I could use to more fully delve into each of the
19 individual patients.

20 Q. So for the subsets of documents that were created for you,
21 you refer to them as the important documents in your report,
22 correct?

23 A. Yes.

24 Q. And so naturally, certain medical records were left out of
25 your review then, correct?

N95Wall6

Carinci - Cross

1 A. No, that's not true.

2 Q. Well, what were the unimportant documents, or were there
3 none?

4 A. Well, there's a level of importance in terms of putting
5 together a 10,000-foot view summary that I would consider
6 important, and those are the ones that are outlined there.

7 Q. OK.

8 A. There was -- pardon me.

9 There was the ability to then delve into the additional
10 remainder of the records, which may have been of lesser
11 importance in some instances or perhaps even more important.
12 But in general, to get the 10,000-foot view, these were the
13 important things I wanted to see.

14 Q. OK. And so let's take a look at these. The list that you
15 have on page 9 of your report, there's eight different
16 categories of documents that it says that you had the legal
17 team curate, I guess. Is that fair?

18 A. Yeah. I have nine, nine bullet points here.

19 Q. Sorry. Nine. Fair enough.

20 And so it says, "The legal team was directed to include any
21 available documents related to" -- let's take the first one --
22 "drug abuse or allegations of the same."

23 Who did -- who directed the legal team to do that?

24 A. I did.

25 Q. OK. And who from the legal team did you direct to do that?

N95Wall6

Carinci - Cross

1 A. Well, I communicated to Attorney Agnew.

2 Q. OK. So am I correct in understanding that Attorney Agnew
3 was directed to include, among other things, documents related
4 to drug abuse or alleged drug abuse?

5 A. Yes.

6 Q. OK. So you left it up to the legal team to determine what
7 records related to drug abuse or alleged drug abuse, correct?

8 A. What do you mean I left it up to the legal team?

9 Q. Well, you directed them to include them, correct?

10 A. Correct.

11 Q. Which means you didn't have them, correct?

12 A. What do you mean by "have them"?

13 Q. Well, you had to get them from somewhere; fair?

14 A. No. I had them.

15 Q. OK. So why were you directing the legal team to prepare
16 these for you if you had them?

17 A. Well, as I mentioned to you, I'm asking to put together a
18 summary of the basic 10,000-foot view of each patient so I can
19 have an understanding of what the issue was.

20 Q. OK. But I'm not --

21 A. I'm just looking for the facts in the case here that then I
22 could use to delve into the specifics, the medical records, to
23 really reach a conclusion about what the issues were.

24 Q. OK. And maybe there's some confusion, but as I understand
25 it, there were summaries that were created by the legal team

N95Wall16

Carinci - Cross

1 that were narratives. Is that fair?

2 A. Yes.

3 Q. And you didn't rely on those, you said; you just used them
4 as a 10,000-foot view, right?

5 A. Correct.

6 Q. But then there were the documents that you directed them to
7 include to base their summaries on. Is that fair?

8 A. The summaries -- so, I think you're perhaps looking at it
9 incorrectly or maybe I'm misunderstanding your interpretation
10 of it. The summaries were to be composed, in part, with these
11 nine pieces of data that I'm asking for. I wanted the
12 summaries to be based upon that.

13 Q. Right. So the nine pieces of data that you were asking
14 for, like -- for example, the first one was documents related
15 to drug abuse or allegations of same. OK? That's something
16 that you asked the legal team to get to you, correct?

17 A. No. I had it.

18 Q. You had it. So -- but why does it say, "The legal team
19 created subsets of important documents pulled from each
20 patient's voluminous records"? OK. So is what you're saying
21 you had all of the records, but you had the legal team go
22 through them for you to pull out what was important?

23 A. No. I think you're misinterpreting what I'm saying, or --

24 Q. Please explain.

25 A. I had the records. All of the records were forwarded to

N95Wall6

Carinci - Cross

1 me. For instance, if I wanted to get a better understanding or
2 an initial understanding of patient A, I would read the summary
3 to get a sense, OK, here's just from, just facts about patient
4 A based on these nine items that I asked for. From there I can
5 then delve into the individual records to delve into more
6 specifics to formulate my opinion. But I had all of the
7 records.

8 Q. OK. So the subsets that were created, those came from the
9 records that you had?

10 A. Yes.

11 Q. OK. Once you had the subsets, did you go back and review
12 all the other records, or did you just rely on the subsets?

13 A. **No. The subsets were referenced -- the medical records,**
14 **underlying medical records are referenced to the subsets, so I**
15 **had access to all of it.**

16 Q. Right. I'm not asking whether you would access to it. I'm
17 asking, when you reviewed it, were you relying on the subsets
18 for your opinion --

19 A. No.

20 Q. You were relying on the subsets created by counsel,
21 correct?

22 A. No. That's not correct at all. I relied on the underlying
23 medical records to formulate my opinion.

24 Q. OK. So then you didn't need them to create subsets; fair?

25 A. No, that's not correct. It was helpful to me to get a

N95Wall6

Carinci - Cross

1 10,000-foot view of each patient.

2 Q. OK. And to get the 10,000 view of each patient, legal team
3 created a summary and attached medical records to support that,
4 right?

5 A. There were references to the underlying medical records. I
6 don't -- I wouldn't use the term "attached"; I am not sure what
7 you mean specifically by that. There was a summary, based on
8 the information I requested, that gave me a broad overview of
9 the patient, what was the salient issue that we were dealing
10 with here? From there I could delve into the underlying
11 medical records to formulate my opinion.

12 Q. OK. So let's talk about just the subsets without regard to
13 your reliance one way or the other.

14 It was the legal team who was directed to create those
15 subsets, right?

16 A. I asked them to put together summaries based on those nine
17 data points.

18 Q. OK. But your report uses the term "subsets."

19 A. OK.

20 Q. OK. So you asked them to create subsets, right?

21 A. I asked them to create summaries from those subsets, yes.

22 Q. But it says here that you asked them -- they were directed
23 to include certain documents in subsets?

24 A. I mean, look, I feel like I answered your question ten
25 times, which -- what more would you like me to say?

N95Wall6

Carinci - Cross

1 Q. I guess the question is did the legal team curate any
2 documents for you?

3 A. What do you mean by curate? I mean --

4 Q. You used the word in your report, "curate" --

5 THE COURT: One at a time, friends. Let the witness
6 finish before the question starts.

7 A. I think to just put it very simply, there's voluminous
8 records. There's 70 patients with many years of data, and for
9 me to get an understanding of patient A, I identified nine
10 pieces of information that I wanted put together into a factual
11 summary from which I could then read, as a 10,000-foot view, to
12 get a general sense for things and then delve into the
13 underlying medical records to formulate my own opinion.

14 Q. Fair enough, but the last two sentences of the middle
15 paragraph on page 9 says: "The legal team also wrote a
16 synopsis of these curated medical records." What did you mean
17 by curated?

18 A. It's exactly what I'm telling you. They put together the
19 summaries based on those nine pieces of information, those
20 curated pieces of information that were pulled out.

21 Q. All right. Let's go through it slower.

22 "The legal team also wrote a synopsis." is the synopsis a
23 summary?

24 A. Yes.

25 Q. OK. And those were based on curated medical records; fair?

N95Wall6

Carinci - Cross

1 A. Yes.

2 Q. OK. Who created the curated medical records?

3 A. They did based on my request for those nine pieces of
4 information.

5 Q. OK. So the legal team determined what fell within those
6 nine pieces of information, right?

7 A. As a first pass, they did. But again, I was able to then
8 go into the primary records and spot-check those, review them,
9 delve into the substance of them.

10 Q. How --

11 A. I didn't rely upon their summaries to formulate my opinion,
12 if that's what you're getting to.

13 Q. Right, but you relied on the summary to figure out what the
14 issues were, correct?

15 A. No. I --

16 Q. You didn't rely on the summaries at all?

17 A. I did rely on the summaries to get a 10,000-foot view of
18 each patient. But I wouldn't say that all of the issues were
19 embodied in those summaries, because it was just factual data.

20 Q. OK. Once you saw something in the summary, you then went
21 to the curated medical records to figure out whether it
22 supported what was in the summary?

23 A. No. The summaries -- I reviewed all of the medical records
24 for each patient. The summaries were in addition to that as a
25 first pass to just review and get a 10,000-foot view of what

N95Wall6

Carinci - Cross

1 was going on.

2 Q. OK. So why didn't you just have them summarize all the
3 medical records?

4 A. I don't think that was practical.

5 Q. OK. But somebody had to determine what was relevant,
6 right?

7 A. I determined what was relevant.

8 Q. OK. And so you directed them to include specific things
9 about drug abuse or allegations of same, right?

10 A. As an example, yes.

11 Q. Yeah. And the legal team determined what related to drug
12 abuse or allegations of same and gave it to you, right?

13 A. No. I had it all. I think you're misunderstanding.

14 Q. So there was no purpose to what they were doing?

15 A. No, that's not true.

16 Q. What was the purpose?

17 A. To provide a 10,000-foot overview of the patient's history.
18 Whether they had all of the drug tickets in there or one of
19 them, I went back to the main medical records to review them.
20 The summaries just got me going so I had an initial sense of
21 each of the patients. That's really it.

22 Q. So, for example, if you went to a patient's summary, you
23 didn't see anything related to drug addiction, right, did you
24 then look at the curated medical records to see if there was
25 anything related to drug addiction?

N95Wall6

Carinci - Cross

1 A. I went through all of the records for each patient. The
2 summaries were just the first pass.

3 Q. Let's go back. Just answer my question. I'm asking you if
4 when you reviewed the summaries created by the legal team and
5 let's say, for example, you say nothing related to drug abuse
6 or allegations of same -- OK? Are you with me?

7 A. Yes.

8 Q. OK. If you didn't see anything, did you then look at the
9 curated medical records that the legal team put together for
10 you to determine whether or not those records -- whether they
11 missed anything?

12 A. Yes. I went back to the main medical records.

13 Q. I'm asking about the curated medical records.

14 A. I think --

15 MS. AGNEW: I'm going to now object. I think we're
16 getting to a little bit of badgering at this point.

17 MR. NOLAN: I'm just really trying to understand the
18 process here.

19 MS. AGNEW: I think he's explained it many times.

20 THE COURT: If you want to keep using your time to do
21 this, go right ahead.

22 MR. NOLAN: Thank you.

23 THE COURT: But we are getting close to badgering.

24 MR. NOLAN: I'm not trying to badger the witness.

25 Q. What I'm trying to understand is if you saw nothing related

N95Wall6

Carinci - Cross

1 to drug abuse in either the summary or the "curated" records --
2 that's your term -- did you then go and look at all of the
3 records to see if there was anything in there related to drug
4 abuse or allegations of same just to make sure you weren't
5 missing anything?

6 A. And the answer is yes.

7 Q. OK. So you reviewed every page of every medical record?

8 A. Yes.

9 Q. OK. How do you know that those were complete?

10 A. I don't know. That was what was provided to me.

11 Q. It was provided to you by counsel?

12 A. All of the medical records for each patient that they were
13 in, I had, that they had I had.

14 Q. OK. So everything you got you got from counsel, and you
15 relied on them to make sure that it was relevant to what you
16 were doing?

17 A. Yes.

18 Q. OK. You have 75 exhibits to your report; fair?

19 A. Yes.

20 Q. OK. And 70 of those exhibits corresponded to the medical
21 records you reviewed for those 70 patients, right?

22 A. OK.

23 Q. Is that fair -- is that correct?

24 A. I mean I'd have to go back and, you know, do the math on
25 it. But I'll take what you're saying. OK.

N95Wall6

Carinci - Cross

1 Q. OK. And those exhibits, did that comprise all of the
2 medical records that you reviewed in connection with your
3 report?

4 A. I don't know.

5 MS. AGNEW: Your Honor, may I? Forgive me. I see you
6 looking at your version of the report. It does not include the
7 medical records.

8 THE COURT: Good thing.

9 MS. AGNEW: Exactly.

10 BY MR. NOLAN:

11 Q. All right. I'm now going to change topics.

12 As for patient examinations that you did, you said you did
13 how many -- 17?

14 A. Yes.

15 Q. OK. And again, you -- you didn't select those; those were
16 selected for you?

17 A. That's correct.

18 Q. OK. I want to focus on the three plaintiffs in this case.
19 Do you know who they are?

20 A. No.

21 Q. The named plaintiffs? Do you know who Mark Daniels is?

22 A. I know the name, yes.

23 Q. Rashid Rahman?

24 A. Yes.

25 Q. And Felipe Rivera-Cruz?

N95Wall6

Carinci - Cross

1 A. Yes.

2 Q. OK. And you issued a medical opinion or an opinion about
3 the care given to each of those four individuals, right?

4 A. I believe so, yes.

5 Q. You didn't physically examine Mark Daniels, did you?

6 A. I don't recall, but let me just take a quick look.

7 No.

8 Q. And you didn't speak to Mr. Daniels before issuing an
9 opinion about his care, did you?

10 A. I did not.

11 Q. And you didn't speak to his medical providers before
12 issuing an opinion about his care, did you?

13 A. No.

14 Q. And you didn't physically examine Rashid Rahman, did you?

15 A. No.

16 Q. OK. And you didn't actually speak with Mr. Rahman before
17 issuing an opinion about his care, did you?

18 A. No.

19 Q. And you didn't speak with any of his medical providers, did
20 you?

21 A. No.

22 Q. OK. And you didn't physically examine Felipe Rivera-Cruz,
23 did you?

24 A. No.

25 Q. And you didn't actually speak with him before issuing an

N95Wall6

Carinci - Cross

1 opinion about his care, did you?

2 A. No.

3 Q. And you didn't speak with any of his medical providers?

4 A. No.

5 Q. With respect to the 17 patients that you did examine, how
6 many of their medical providers did you speak to?

7 A. I don't think I spoke to any of them.

8 Q. Did you speak to any of the RMDs?

9 A. Not that I can recall specifically.

10 Q. Did you review any testimony given by any RMDs or medical
11 providers in support of your opinion in this case?

12 A. Well, let me just go back just for a quick minute just to
13 be clear. When I arrived at the facilities, I did speak with
14 some physicians. I can't recall who they were. They did, you
15 know, bring me to the rooms. They did get me settled, so I
16 don't know specifically who I spoke to. My understanding is
17 that they were physicians that I spoke to.

18 Q. All right. But fair to say you didn't speak with anybody
19 about the reasons behind any decisions made with respect to the
20 pain management decisions that any medical providers made?

21 A. No.

22 Q. And so you can't say one way or the other what their
23 reasoning was, as reflected -- you're just looking at the
24 records; nothing further?

25 A. I didn't have a conversation with the particular providers,

N95Wall6

Carinci - Cross

1 no.

2 Q. So you were really just looking at the records?

3 A. Well, are we talking about the patients I examined in those
4 instances --

5 Q. Yeah. You were -- yeah, so let me just ask you.

6 A. -- the providers?

7 THE COURT: Counsel. Counsel, you've got to let the
8 witness finish.

9 THE WITNESS: Agreed.

10 THE COURT: "Well, are we talking about the patients I
11 examined in those instances?"

12 THE WITNESS: What was your question, sir?

13 MR. NOLAN: Yeah, I will withdraw the question.

14 Q. With respect to the patients you did examine, you relied on
15 their records and an examination of them, correct?

16 A. Yes.

17 Q. OK. And you -- did you look at anything other than the
18 records, and did -- strike that.

19 Did you base your decisions or your opinions on anything
20 other than your examination of those individuals and your
21 examination of their records?

22 A. Well, I would consider the MWAP forms as sort of separate
23 from the medical records. So yes, I looked at those as well.

24 Q. Anything else?

25 A. Not that I can recall.

N95Wall6

Carinci - Cross

1 Q. And you testified earlier that the medical records were --
2 I think you used the word "disarray."

3 A. I don't know if I used that word.

4 Q. OK. Were they in disarray?

5 A. In some instances; in many instances, yes.

6 Q. And were they difficult to understand?

7 A. Yes.

8 Q. And were they illegible in many cases?

9 A. Yes.

10 Q. OK. How about the MWAP forms?

11 A. Some were illegible, yes.

12 Q. Were any of them handwritten?

13 A. I don't recall.

14 Q. Were they difficult to understand?

15 A. Some of them, yes.

16 MS. AGNEW: Your Honor, could we get a check on time?
17 I do need a break. I'm happy to wait if it's going to be 15
18 minutes.

19 THE COURT: Off the record.

20 (Discussion off the record)

21 THE COURT: All right.

22 Do you want to take a break now?

23 MR. NOLAN: Sure.

24 THE COURT: All right.

25 MS. AGNEW: Thank you.

N95Wall6

Carinci - Cross

1 MR. NOLAN: Your Honor, can I get an instruction that
2 they're not to talk about the testimony?

3 THE COURT: Of course.

4 (Recess)

5 THE COURT: Mr. Nolan.

6 BY MR. NOLAN:

7 Q. OK. I apologize for going back to this topic, but you
8 testified that you reviewed all of the medical records for
9 every patient that's referenced in your report. Correct?

10 A. Yes.

11 Q. And how many hours would you estimate that took?

12 A. 60 hours probably at this point.

13 Q. 60 hours, a lot of work?

14 A. Right. Was that a question?

15 Q. Was that a lot of work, 60 hours, for you?

16 A. Yes, it's a lot.

17 Q. You recall, again, you were deposed in this case --

18 A. Yes.

19 Q. -- correct?

20 And your attorney was there when you were deposed -- or not
21 your attorney, but Ms. Agnew was there when you were deposed?

22 A. Yes.

23 Q. And again, you gave an oath at that time, correct?

24 A. Yes.

25 Q. And you swore to tell the truth, right?

N95Wall6

Carinci - Cross

1 A. Yes.

2 Q. I'm going to read from page 98 of your deposition
3 transcript, lines 16 to page 99, line 6:

4 MS. AGNEW: Your Honor, he was deposed twice. Can I
5 just ask --

6 MR. NOLAN: The first one. You can look at mine, if
7 you want.

8 "Q. So 15 to 20 hours reviewing medical records?

9 "A. Yes.

10 "Q. Is that reviewing medical records for each of the 70
11 patients that you were provided?

12 "A. Yes.

13 "Q. Is that 15 to 20 hours per patient or a total for all the
14 material records?

15 "A. No. That's cumulative, but that doesn't include the time,
16 you know, spent at the facilities examining those individual
17 patients, which was essentially a full day at each of those
18 facilities."

19 Q. Does that refresh your recollection whether -- as to how
20 long you spent reviewing medical records for this case?

21 A. Yes. And I know I went on to further clarify that, and I
22 believe we talked about 40 hours further down in the
23 deposition.

24 Q. And that was for other work that you did other than
25 reviewing medical records?

N95Wall6

Carinci - Cross

1 A. No. I think that was all-encompassing. In addition, you
2 know, we didn't account for the time spent at the facilities.

3 Q. OK. Fair.

4 I want to talk a little bit about gabapentin. That's also
5 known as Neurontin, correct?

6 A. Yes.

7 Q. Neurontin's just a brand name?

8 A. Yes.

9 Q. OK. And we talked a little bit about FDA approval earlier.
10 Do you recall that?

11 A. Yes.

12 Q. And what, if anything, is gabapentin FDA-approved for?

13 A. Well, there's probably multiple seizure diagnoses that it's
14 approved for. I don't know about those. I don't provide it
15 for, you know, seizures, an antiepileptic medication, so
16 there's probably some FDA approvals for seizure-type
17 indications that I'm not familiar with.

18 Q. OK. And in terms of your practice, in terms of pain
19 management, what is it FDA-approved for, if anything?

20 A. It may be diabetic peripheral neuropathy, but again, I'm
21 not --

22 THE COURT: Slow down for the court reporter, please.

23 Diabetic peripheral neuropathy.

24 THE WITNESS: Yes.

25 BY MR. NOLAN:

N95Wall6

Carinci - Cross

1 Q. OK. Do you know whether it's FDA-approved for diabetic
2 peripheral neuropathy or not?

3 A. Not with 100 percent certainty.

4 Q. OK. Do you know whether it was at the time you issued your
5 report?

6 A. I don't recall.

7 Q. OK. Gabapentin, fair to say it's potentially addictive,
8 right?

9 A. Theoretically, there's a very minimal risk, yes.

10 Q. And you said it works by essentially binding to the calcium
11 channels in your spinal cord; is that fair?

12 A. Yes.

13 Q. Same way as Lyrica works?

14 A. Yes.

15 Q. And you said there's potential for it to be addictive, but
16 there's also potential for it to be abused, right --
17 gabapentin?

18 A. Yeah. I mean really anything could be abused.

19 Q. And to be clear, gabapentin and Lyrica are both known as
20 gabapentinoids; is that fair?

21 A. Yes.

22 Q. And can you just explain what does -- is that a class of
23 drugs -- gabapentinoids?

24 A. Yes.

25 Q. And with respect to the potential for abusing them, is

N95Wall6

Carinci - Cross

1 that -- can that be exacerbated if a person has a history of
2 addiction?

3 A. Well, the risk -- you know, the risk of addiction increases
4 if someone has a risk -- a history of addiction.

5 Q. OK. What if they are also using, a person's also using
6 opioid therapies?

7 A. Correct. It would increase the risk.

8 Q. OK. And so is there a risk with, when a patient uses
9 gabapentin also with alcohol?

10 A. Yes.

11 Q. And what's that risk?

12 A. I don't know if anyone knows the specific, quantifiable
13 number, but the risk increases.

14 Q. OK. And how about using them in combination with CNS
15 depressants?

16 A. And what's the question with regard to that?

17 Q. CNS depressants, central nervous system drugs.

18 A. Yes. What's your question, though?

19 Q. Is there any risk posed by using gabapentinoids with those?

20 A. Yes, there are risks.

21 Q. Does gabapentin or gabapentinoids generally, do they
22 have -- are they commonly indicated with respect to other
23 medications? Are there any that you can name that you think it
24 shouldn't be mixed with?

25 THE COURT: Counsel, one question at a time.

N95Wall6

Carinci - Cross

1 MR. NOLAN: Yeah.

2 THE COURT: Which one do you want?

3 BY MR. NOLAN:

4 Q. Are there any medicines that, other pain medications or
5 pain medications at all that you're aware of that shouldn't mix
6 with gabapentinoids?

7 A. Yes.

8 Q. OK. What are those?

9 A. Well, I think just in a basic form, it's not generally a
10 good practice to have someone on both gabapentin and Lyrica,
11 for instance. In addition, other central nervous system
12 antiepileptic agents would also be generally not best practice.

13 Q. You cite in your report, if you look at the bottom, there's
14 a number of footnotes to various articles, authorities,
15 publications. Is that fair?

16 A. Yes.

17 Q. OK. You consider those part of your report?

18 A. The references? Yes. I mean they're referenced out to
19 those reports, yeah.

20 Q. Are those reliable sources?

21 A. Generally, yes.

22 Q. And did you rely on them in preparing your report?

23 A. Only so much as it was to make a particular point or to
24 reference a particular, whatever I was referencing.

25 Q. And the sources that you relied on, the publications were

N95Wall16

Carinci - Cross

1 reliable sources?

2 A. Yes.

3 Q. I want to bring your attention, very briefly, to -- I
4 believe it's footnote 4.

5 A. What page are you on?

6 Q. It's on page 6.

7 A. OK.

8 Q. Talks about a -- there's a reference to a Goodman CW, Brett

9 AS. Do you know who that refers to? Is that an author?

10 A. Are you asking me if I know the author?

11 Q. Do you know who it is that authored that publication?

12 A. Well, it's referenced there, but I don't know who that
13 person is.

14 Q. OK. But the publication that you relied on is a clinical
15 overview of off-label use of gabapentinoid drugs. Is that
16 fair?

17 A. Yes.

18 Q. OK. And you said -- and that would be a reliable article;
19 is that fair?

20 A. For the point I'm making, yes.

21 MR. NOLAN: OK. I'm going to read from that article,
22 under F.R.E. 803(18), your Honor.

23 THE COURT: I have it memorized.

24 MS. AGNEW: Your Honor, I'd also ask for a copy,
25 please.

N95Wall16

Carinci - Cross

1 MR. NOLAN: Sure.

2 MS. AGNEW: Thank you. He should get a copy.

3 MR. NOLAN: Who should get a copy? Are you talking
4 about the witness? Well, he doesn't need it.

5 MS. AGNEW: Do you have another copy?

6 MR. NOLAN: Do you want to enter it into evidence?

7 MS. AGNEW: No. I'm asking you if you have another
8 copy.

9 MR. NOLAN: I do. I have two more copies.

10 MS. AGNEW: Then why can't he see it?

11 MR. NOLAN: Well, I guess he can.

12 THE COURT: Are you people talking off the record, or
13 what?

14 MS. AGNEW: Sorry.

15 MR. NOLAN: Sorry.

16 THE COURT: If you're going to talk off the record,
17 use your off-the-record voices.

18 BY MR. NOLAN:

19 Q. I'm going to show you, Dr. Carinci, an exhibit that's
20 marked as D28. I hand marked it.

21 A. Thank you.

22 Q. And have you taken a look at exhibit D28?

23 A. I mean I haven't read through it, but yes, I -- this is
24 familiar to me.

25 Q. And that is, in fact, the article that is referenced in

N95Wall6

Carinci - Cross

1 footnote 4 of your report; fair?

2 A. Yes.

3 Q. OK. And I'm just going to read through portions of it with
4 you. If you can look at the second page, on the right-hand
5 side, about halfway down, there is a paragraph that starts with
6 "several findings are noteworthy." Do you see that?

7 A. Yes.

8 Q. OK. It says: "First, for gabapentin treatment of painful
9 diabetic neuropathy (a common condition for which gabapentin is
10 prescribed off-label), the evidence is mixed at best. Among
11 five trials, two (including the largest and longest-duration
12 trial) showed no benefit, and two showed improvement of only
13 about one point on zero to ten scales compared with placebo."

14 Do you see that?

15 A. I do.

16 Q. OK. If you go to the next sentence, it says, "A recent
17 Cochrane review estimated that roughly six patients with
18 painful diabetic neuropathy would require treatment with
19 gabapentin to provide 'substantial benefit' for one patient."

20 Do you see that?

21 A. Yes.

22 Q. OK. And then it says: "Second, there were few studies of
23 gabapentinoids for nondiabetic neuropathies; studies were
24 either negative or yielded statistically significant mean
25 differences less than one point on zero to ten scales compared

N95Wall6

Carinci - Cross

1 with placebo." Do you see that?

2 A. Yes.

3 Q. OK. The next paragraph down, it says, "Third, the evidence
4 does not support gabapentinoid therapy for low back pain or
5 radiculopathy." Do you see that?

6 A. Yes.

7 Q. And then it says, "In the largest study (a
8 placebo-controlled trial of pregabalin for sciatica), the drug
9 was ineffective." Do you see that?

10 A. Yes.

11 THE COURT: Slow down.

12 BY MR. NOLAN:

13 Q. OK. And then if you look at the next page, there's a
14 statement at the top. It says, "table 1, randomized clinical
15 trials of gabapentin versus placebo for off-label treatment of
16 pain." Do you see that?

17 A. Yes.

18 Q. And then the first, under clinical condition, it lists a
19 test, it lists diabetic neuropathy, a trial for that. Do you
20 see it?

21 A. I do.

22 Q. And it says 421 participants. Do you see that?

23 A. Yes.

24 Q. And for 12-week duration, there was no benefit in the
25 difference in pain compared with the placebo. Do you see that?

N95Wall6

Carinci - Cross

1 A. Yes.

2 Q. Now, if you look at the bottom of the article, the bottom
3 right, the first -- the paragraph at the bottom right, it says,
4 "Fifth, both gabapentin and pregabalin are FDA-approved for
5 treatment of postherpetic neuralgia." Do you know what
6 postherpetic neuralgia is?

7 A. Yes.

8 Q. What is it?

9 A. Postherpetic neuralgia is essentially a neuropathic pain
10 condition that results after an acute herpes zoster infection.

11 Q. OK. And doesn't have anything to do with diabetic
12 neuropathy?

13 A. What was your question?

14 Q. It's not related to diabetic neuropathy, is it?

15 A. It's not related to it, no.

16 Q. Right. And does that refresh your recollection as to what
17 the gabapentinoids are approved for by the FDA?

18 A. Does this article refresh my --

19 Q. No. That statement right there.

20 A. Yes.

21 Q. And then would you go to the next page, sir; there's a
22 paragraph on the bottom left. It starts with "sixth." Do you
23 see that?

24 A. I do.

25 Q. It says: "Tables 1 and 2 summarize that a small number of

N95Wall6

Carinci - Cross

1 placebo-controlled gabapentinoid trials have been performed for
2 various other pain syndromes. With few exceptions, the drugs
3 were either ineffective or associated with small analgesic
4 effects that were statistically significant but of questionable
5 clinical importance." Do you see that?

6 A. Yes.

7 Q. If you go to the next page, under -- there's a column that
8 says the language of review articles and guidelines involving
9 gabapentinoids. About halfway through the first paragraph,
10 there's a sentence starting with "Neuropathic pain." See that?

11 A. Yes.

12 Q. It says, "Neuropathic pain is defined by the International
13 Association for the Study of Pain as '[p]ain caused by a lesion
14 or disease of the somatosensory nervous system.'"

15 Is that an accurate description of neuropathic pain?

16 A. It's reasonably, yes.

17 Q. Then it says, "Many clinicians likely conceptualize
18 neuropathic pain in a similarly nonspecific way that includes
19 conditions ranging from localized anatomical pathology (e.g.,
20 nerve root compression from disc herniation) to systemic
21 disorders with neuropathic effects (e.g., diabetes)." Do you
22 see that?

23 A. I do.

24 Q. OK. And then to the right, there's a column, says adverse
25 effects and misuse. Do you see that?

N95Wall6

Carinci - Cross

1 A. Yes.

2 Q. It also says that "Meta-analyses consistently show a
3 substantial incidence of dizziness, somnolence and gait
4 disturbance in patients who take gabapentinoids, with
5 dose-dependent effects." Would you agree with that?

6 A. Yes. Depends, but yes.

7 Q. And then it says, next paragraph down, first sentence:
8 "Evidence of misuse of gabapentinoids is accumulating and
9 likely related to the opioid epidemic. A recent review article
10 reported an overall population prevalence of gabapentinoid
11 'misuse and abuse' as high as 1 percent, with substantially
12 higher prevalence noted among patients with opioid-use
13 disorders." See that?

14 A. I do.

15 Q. "The higher prevalence among patients with opioid-use
16 disorders may relate to the reported augmentation of euphoria."
17 Do you agree with that?

18 A. Yes, in some instances.

19 Q. And then the next sentence, it says, "This trend is
20 troubling, particularly because concomitant use of opioids and
21 gabapentinoids is associated with increased odds of
22 opioid-related death." Do you agree with that?

23 A. No, not particularly.

24 Q. OK. But this is an article you cited and put in your
25 report?

N95Wall6

Carinci - Cross

1 A. Let me clarify my point of view. I think it depends is
2 what I'll say there.

3 Q. OK.

4 A. Depends.

5 Q. Then the next paragraph says, "Reports from law enforcement
6 agencies corroborate growing diversion activity and street
7 value for gabapentinoids." Do you agree with that?

8 A. I don't dispute it.

9 Q. You don't?

10 A. Have not seen it in clinical practice personally.

11 Q. OK. And the next page, under conclusions, it says: "The
12 evidence to support off-label gabapentinoid use for most
13 painful clinical conditions is limited. For some conditions,
14 no well-performed controlled trials exist. For others, one or
15 several placebo-controlled studies have been published, but
16 results have generally shown the drugs to be either ineffective
17 or only modestly and inconsistently effective." Do you see
18 that?

19 A. Yes.

20 Q. OK. And just to be clear, this is an article you used in
21 support of your own report; fair?

22 A. Yes, it is.

23 Q. Thank you.

24 I want to ask a little bit about tramadol. That's
25 mentioned in your report a few times, but I think you used the

N95Wall6

Carinci - Cross

1 word Ultram?

2 A. Yes.

3 Q. Is that the commercial name?

4 A. Yes.

5 Q. Is that a drug that's meant to be taken routinely?

6 A. It depends.

7 Q. You typically would not prescribe it in a manner that's
8 used on a day-to-day basis, would you?

9 A. No, that's not true.

10 Q. You would typically -- don't you consider it an abortive
11 medication?

12 A. In some instances, yes. But in others, no.

13 Q. OK. I'll come back to that.

14 On page 11 of your report, you refer to a patient named
15 James Allen. See that?

16 A. Yes.

17 Q. You refer to a drug called Tegretol?

18 A. Yes.

19 Q. Is that an anticonvulsant drug?

20 A. Yes.

21 Q. Is that sort of like an antiseizure drug?

22 A. Yes.

23 Q. OK. And does it also go by the name carbamazepine?

24 A. Yes.

25 Q. And is that ever used to treat pain?

N95Wall6

Carinci - Cross

1 A. It is.

2 Q. Is it ever used to treat nerve pain?

3 A. It is. It's like a third-line agent.

4 Q. OK. At page 12 of your report, there's a reference to a
5 Frank Andolina?

6 A. Yes.

7 Q. It refers to -- there's a reference to Suboxone. What is
8 Suboxone?

9 A. Suboxone is an opioid class of medications that is
10 generally prescribed for people that have an opioid-abuse
11 disorder.

12 Q. And is it -- what is it made of?

13 A. Buprenorphine is the main ingredient.

14 Q. Is buprenorphine an opioid?

15 A. It is.

16 Q. And is it for -- it's used to treat addiction; is that
17 fair?

18 A. It is used to treat addiction. It is also used to treat
19 pain.

20 THE COURT: Doctor, would you spell what the drug is
21 made from; what is it its main ingredient?

22 THE WITNESS: Buprenorphine, B-U-P-E-N.

23 MS. AGNEW: I think it's on our list, your Honor.

24 THE WITNESS: This is a lot of pressure.

25 THE COURT: Anyway, somebody give it to the court

N95Wall6

Carinci - Cross

1 reporter eventually.

2 BY MR. NOLAN:

3 Q. All right. You said it's used to treat -- are you saying
4 Suboxone is used to treat pain?

5 A. Yes.

6 Q. Is that frequent?

7 A. It's increasingly used in that instance.

8 Q. Does it work well for pain?

9 A. Yes.

10 Q. Do you prescribe it for pain?

11 A. I have in the past.

12 Q. Any of your patients responded well when you do?

13 A. Some have and some have not.

14 Q. Is it -- in addition to treating pain, does Suboxone
15 also -- is it used to treat active addiction?

16 A. It can.

17 Q. OK. And chronic pain and addiction have many shared
18 patterns, correct?

19 A. They do.

20 Q. Those are neuropsychological patterns?

21 A. Yes.

22 Q. And the presence of active addiction complicates the care
23 of chronic pain patients, right?

24 A. It does.

25 Q. And treating patients with active addictions with

N95Wall6

Carinci - Cross

1 medications that have abuse potential is not something that is
2 advised, is it?

3 A. Generally not.

4 THE COURT: Wait for just a minute.

5 OK.

6 BY MR. NOLAN:

7 Q. OK. And in your practice, you have had patients who demand
8 specific medications, right?

9 A. Sometimes, yes.

10 Q. Are there times when you refuse to give it to them?

11 A. Yes.

12 Q. Even when they're telling you it helps for their pain?

13 A. Yes.

14 Q. Why is that?

15 A. Well, I think it depends. It depends on what particular
16 medication they're asking for. It depends on their medical
17 history. It depends on their medical contraindications. I
18 think there's a lot that goes into that assessment.

19 Q. So just because a patient tells you it worked for their
20 pain doesn't necessarily mean that it's right for them, right?

21 A. Correct.

22 Q. That could be true with any drug, right?

23 A. Possibly.

24 Q. Any pain medication?

25 A. Possibly, yes.

N95Wall6

Carinci - Cross

1 Q. Have you ever given in and prescribed a drug that you
2 thought was inappropriate?

3 A. No.

4 Q. You wouldn't expect other providers to prescribe
5 medications that they thought were inappropriate for a patient,
6 would you?

7 A. No. I would just ask that they document their rationale.

8 Q. OK. And in cases where you refused to provide the drug of
9 choice to the patient, do you offer them alternatives?

10 A. Yes.

11 Q. OK. What are some of those alternatives?

12 A. Well, I mean it depends. It depends what they're asking
13 for and it depends what their medical condition is, and it's --
14 I don't think you can answer the question without knowing more
15 about the particular patient and request.

16 Q. Do you ever offer nonmedication alternatives?

17 A. Yes.

18 Q. OK. What types?

19 A. Well, physical therapy, chiropractic therapy, TENS units,
20 you know, injections or procedures.

21 Q. All of those are things that can be used to treat pain?

22 A. Yes.

23 Q. And if the patient doesn't want those alternatives, then
24 there's really nothing more that you can do for them, right?

25 A. I think it depends. Depends how willing they are to try

N95Wall6

Carinci - Cross

1 something that they've, they may not initially be open to.

2 Depends on the patient. Depends on the situation.

3 Q. When a patient comes to you and wants a specific drug and
4 you -- maybe you have your doubts, is there anything that you
5 require them to do before you'll consider putting them on that
6 drug?

7 A. Well, again, you know, we're just talking in such an
8 abstract way, but I think depending upon the particular
9 medication at issue, I would want to know for sure what their
10 medical records, their prior history -- you know, if they're
11 attesting that a particular drug is very helpful to them, I
12 would like to see corroborative data in their medical record.
13 Depending on the particular medication, we may necessitate a
14 urine toxicology screen, a phone call with their prior treating
15 doctor. I mean there's -- you know, it can get complicated.

16 Q. Have you had occasions in your practice where you found
17 that a patient was abusing drugs?

18 A. Yes.

19 Q. OK. And when you've found that they were abusing drugs, do
20 you typically wean them off or take them off the drug
21 immediately? Sorry.

22 Do you typically take them off the drug?

23 A. It really depends upon the drug we're talking about and
24 what particular infraction we're speaking of.

25 Q. Any case you've ever just stopped cold turkey prescribing

N95Wall6

Carinci - Cross

1 it?

2 A. Yes.

3 Q. You mentioned Elavil on your direct examination. Is that
4 also known as amitriptyline?

5 A. Yes.

6 Q. That's considered by some to be a first-line medication for
7 chronic pain, right?

8 A. Yes.

9 Q. And it can lessen pain severity?

10 A. Yes.

11 Q. And it can improve pain control, correct?

12 A. In some instances, yes.

13 Q. And it can result in improved function, correct?

14 A. In some instances, yes.

15 Q. All right. So we can agree it's a valid treatment for some
16 patients with neuropathic pain, right?

17 A. Yes.

18 Q. And it's a valid treatment for some patients with chronic
19 pain, right?

20 A. Yes.

21 Q. Is the same true with respect to Cymbalta?

22 A. Yes.

23 Q. Are you familiar with Sublocade?

24 A. No.

25 Q. OK. Is there an injection form of Suboxone that you're

N95Wall6

Carinci - Redirect

1 aware of?

2 A. There may be.

3 Q. OK. You just don't prescribe it?

4 A. That's not something I would prescribe, no.

5 Q. OK. You've never heard of Sublocade?

6 A. No.

7 MR. NOLAN: No further questions.

8 THE COURT: Thank you.

9 Redirect examination, counsel.

10 REDIRECT EXAMINATION

11 BY MS. AGNEW:

12 Q. All right. Dr. Carinci, I'm going to direct your attention
13 back to the exhibit that was premarked D27 by defense counsel.

14 MS. AGNEW: Was this entered into the record, counsel?

15 MR. NOLAN: No.

16 I'll move it into evidence, your Honor.

17 MS. AGNEW: We're happy to have it in evidence, your
18 Honor.

19 THE COURT: Received.

20 (Defendants' Exhibit 28 received in evidence)

21 BY MS. AGNEW:

22 Q. Dr. Carinci, I want to look again at the last page of --
23 well, first of all -- strike that.

24 Can you look at your report, Dr. Carinci, where you cited
25 this particular article, and I believe it was on page 6. And

N95Wall6

Carinci - Redirect

1 what I'd ask you to do is just review that paragraph again,
2 especially the middle section, to refresh your recollection on
3 why you cited this particular article. Take your time.

4 A. Well, I cited this article in reference to the fact that
5 gabapentin and Lyrica are widely prescribed for off-label pain
6 syndromes, and they're frequently first-line alternatives for
7 chronic pain, particularly when opioids are being weaned,
8 withheld, withdrawn. And you know, whereas there may not be a
9 hundred -- you know there's always conflicting studies. Some
10 show efficacy. Some show no efficacy. Really depends on how
11 the trials were designed. There's oftentimes not great
12 clinical efficacy.

13 At the same time, we know with other patients that they may
14 have no other alternatives, and we know that gabapentin is a
15 relatively safe medication. It's generally well tolerated and
16 does have effect on multiple different pain medications --
17 multiple different pain syndromes. So I was citing it in
18 reference to the fact that it is being used off-label for many
19 pain conditions despite the fact that there may be limited
20 evidence.

21 Q. OK. And can you tell us the title of D --

22 MS. AGNEW: Is it 27 or 28? I am so sorry.

23 MR. NOLAN: Sorry. It's 28.

24 MS. AGNEW: OK.

25 MR. NOLAN: Did I say D27? If I did, it's D28 for the

N95Wall6

Carinci - Redirect

1 record.

2 MS. AGNEW: OK. I apologize.

3 Q. D28, the title of D28 is the clinical overview of off-label
4 use of gabapentinoid drugs. Can you tell us, Dr. Carinci, what
5 is a clinical overview, in your experience?

6 A. A clinical overview is essentially a culmination of
7 articles, you know, looking at efficacy of a particular
8 outcome. And in this case, it's the off-labelled use of
9 gabapentinoid drugs. And so the overview is meant to provide
10 clinicians with essentially a summary of the thinking to date.

11 Q. And when you say thinking to date, are you indicating that
12 this is a clinical summary of the trial data available to date?

13 A. Yes.

14 Q. OK. And in the section that Mr. Nolan read into the
15 record, isn't it true it says, "for some conditions no
16 well-performed controlled trials exist"?

17 A. Correct.

18 Q. OK. And then that same section of the article, which is
19 the conclusion section, if you look at the last paragraph,
20 probably the third sentence down, it says, "Judicious
21 therapeutic trials of gabapentinoids are justified in patients
22 with selected off-label pain syndromes when at least modest
23 evidence of efficacy exists." Correct?

24 A. Yes.

25 Q. When you reviewed, sir, the records and you went and

N95Wall6

Carinci - Redirect

1 examined those patients in order to publish your report, did
2 you find evidence of efficacy existing in these patients with
3 their prior treatment with gabapentinoids?

4 A. Yes.

5 Q. OK. And so would your opinion in this case actually
6 comport very much with the conclusion of this article?

7 A. Yes.

8 Q. Can you tell me -- Mr. Nolan talked to you about Suboxone
9 and in particular because one of these patients was on
10 Suboxone. Correct?

11 A. Yes.

12 Q. And do you prescribe Suboxone to treat neuropathy in your
13 patients?

14 A. I have.

15 Q. OK. And is it always a successful treatment for
16 neuropathy?

17 A. No.

18 Q. If you had to, on any given patient, determine whether you
19 would prescribe Suboxone for the treatment of neuropathy or a
20 gabapentinoid, in your clinical experience, which would be your
21 first-line treatment?

22 A. Gabapentin.

23 Q. And why is that, sir?

24 A. Safety, tolerability, efficacy are better with gabapentin
25 in general.

N95Wall6

Carinci - Redirect

1 Q. And is it possible if there is a patient who is already
2 being treated with Suboxone for opioid addiction therapy that
3 they might also need additional pharmaceutical treatment for
4 severe diabetic neuropathy?

5 A. Yes.

6 Q. And why would that be?

7 A. Well, patients can have more than one pain issue. Patients
8 can have overlapping problems, such as addiction and pain, like
9 we talked about. And as we talked about early on, this
10 morning, patients can respond differently to different
11 medications, whereas some patients may respond to Suboxone for
12 pain management, others may not. Some of them, patients may
13 have -- Suboxone may actually be a good deterrent for opioid
14 abuse. Others it may not. And so patients are individuals,
15 and I'll just hearken back to that fact, that everyone responds
16 differently to medications and when we find a medication that
17 is efficacious, we're very careful in tapering it off.

18 Q. OK. And you also discussed with Mr. Nolan
19 nonpharmaceutical treatments, correct?

20 A. Yes.

21 Q. OK. What is the goal when you prescribe a patient a
22 nonpharmaceutical treatment?

23 A. Well, the goal is really multimodal therapy. Pardon me.

24 The goal is multimodal therapy, whereas a single agent or
25 intervention may provide some relief, generally speaking, with

N95Wall6

Carinci - Redirect

1 chronic pain, multimodal therapy tends to be synergistic in the
2 sense that we can provide overall better analgesia with
3 multiple routes of treatment.

4 Q. OK. And with those nonpharmaceutical treatments, would
5 your goals be the same as if you were indeed tendering
6 pharmaceutical treatment?

7 A. Would you ask the question again, please? I'm sorry.

8 Q. I will. That was confusing, and I apologize.

9 So, you reviewed the records of patients who, in fact,
10 engaged in nonpharmaceutical treatments, correct?

11 A. Yes.

12 Q. In every one of those situations, did you find that the
13 nonpharmaceutical treatments constituted effective pain
14 management?

15 A. Well, in some instances they were effective. In others,
16 no.

17 Q. OK. And so for any given patient, could you rely solely on
18 nonpharmaceutical treatments?

19 A. No.

20 MS. AGNEW: I have no further questions, your Honor.

21 THE COURT: Thank you.

22 Recross, counsel.

23 MR. NOLAN: Nothing, your Honor.

24 THE COURT: Wonderful. You may step down, sir.

25 (Witness excused)

N95Wall16

Carinci - Redirect

1 THE COURT: Is this a good time to break, friends?

2 MS. AGNEW: I think it is, your Honor.

Mueller - Direct

1 AFTERNOON SESSION

2 2:04 p.m.

3 (In open court)

4 THE COURT: Good afternoon, folks. Won't you be
5 seated.

6 Mr. Morrison.

7 MR. MORRISON: The plaintiff class will call Susan
8 Mueller to the stand.

9 SUSAN MUELLER MD,

10 called as a witness by the Plaintiff,

11 having been duly sworn, testified as follows:

12 DIRECT EXAMINATION

13 BY MR. MORRISON:

14 Q. Good afternoon, Dr. Mueller. How are you doing?

15 A. Good afternoon.

16 Q. Just to start, can you please let us know where you are
17 currently employed.

18 THE WITNESS: I have hearing problems, cochlear
19 implants.

20 THE COURT: Yes, ma'am.

21 THE WITNESS: And—

22 THE COURT: Do you want them to speak up?

23 THE WITNESS: I have this little device that if he
24 wears it, it will stream right into my devices. I'm having
25 trouble hearing you.

N961ALL3

Mueller - Direct

1 (Discussion off the record)

2 BY MR. MORRISON:

3 Q. Dr. Mueller, can you start by you identifying where you
4 currently work.

5 A. My office is at the Fishkill Correctional Facility in
6 Beacon, New York.

7 Q. What position do you hold there?

8 A. Clinical physician III, regional medical director.

9 Q. Okay. And you're a regional medical director of what?

10 A. The Sullivan, Great Meadow, Oneida, and Watertown hubs.

11 Q. Okay. Can you explain what a hub is.

12 A. It's a grouping of correctional facilities—geographic
13 grouping.

14 Q. Okay. So for each of those hubs—how many did you just
15 mention; was it five?

16 A. Four.

17 Q. Four. For each of those hubs combined, how many
18 correctional facilities do you oversee, for lack of a better
19 word?

20 A. Good question.

21 Q. You don't know?

22 A. Honestly, I don't.

23 Q. Okay. How about an estimate?

24 A. Maybe about 15.

25 Q. And currently what are the duties and responsibilities of a

N961ALL3

Mueller - Direct

1 regional medical director for a hub?

2 A. We attend quality improvement meetings that are held
3 quarterly in the facilities; we're a participant in mortality
4 quality improvement meetings that occur when there's an
5 unexpected death in a facility; we—when specialty referrals
6 are made by the primary care physicians, if the outside
7 reviewing agency denies the consult, then it's forwarded to the
8 RMD for a review, for a final decision, one way or another; we
9 serve as a resource to the facilities; any needs or questions,
10 be it clinical or operational, they email or call us; sometimes
11 we help train new employees. I'm kind of drawing a blank after
12 that.

13 Q. That's okay. That's enough.

14 I think you've also testified before that you are a
15 clinical supervisor of the physicians working in the facilities
16 under your hubs; is that accurate?

17 A. Yes. In other words—yes, clinical. We're not their
18 actual supervisor, but we are supervisory for clinical matters,
19 yes.

20 Q. Okay. And it's also accurate that back starting in June of
21 2017 through February 8th of 2022, you also, as part of your
22 responsibility, reviewed and were responsible for either
23 approving or disapproving requests by providers to prescribe
24 patients MWAP—M-W-A-P—prescriptions, is that it?

25 MS. THOMAS: Objection, leading.

N961ALL3

Mueller - Direct

1 A. Yes.

2 THE COURT: It's cross.

3 MS. THOMAS: No. This is his witness.

4 THE COURT: But isn't this an adverse witness?

5 MS. THOMAS: He hasn't established that she's a
6 hostile witness.

7 THE COURT: And it is introductory.

8 THE WITNESS: I don't—was I supposed to hear that?

9 THE COURT: Yes. It doesn't matter.

10 THE WITNESS: Can you repeat? I don't know what was
11 said. When I have it tuned in to you, I'm not hearing other
12 things.

13 THE COURT: That was some legal talk.

14 BY MR. MORRISON:

15 Q. That was legal talk. You didn't need to hear that.

16 A. Oh, okay.

17 Q. When did you first become a regional medical director? And
18 I'm going to use the acronym RMD, if that's okay. Do you
19 understand what I mean?

20 A. Yes.

21 Q. Okay.

22 A. I'm—I think it was—it was either two thousand—the end of
23 2012 or 2013.

24 Q. And prior to that what were you doing; where were you
25 working?

N961ALL3

Mueller - Direct

1 A. I was the facility health service director at Wallkill
2 Correctional.

3 Q. And as facility health service director at Wallkill
4 Correctional Facility, did you provide direct patient care?

5 A. Yes, I was the only provider there. There were no others.

6 Q. Okay. And when you became an RMD, would you consider that
7 a promotion when you became an RMD?

8 A. It was a promotion, but we made less money.

9 Q. Doesn't sound like a promotion to me.

10 A. And worse benefits. Yeah.

11 Q. When you became an RMD, did you continue to provide direct
12 patient care to patients in custody of the New York State
13 Department of Corrections?

14 A. No.

15 Q. So is it fair to say that you haven't provided any direct
16 patient care to any incarcerated individual since your
17 promotion?

18 A. That's correct.

19 Q. Other than Wallkill Correctional Facility, were you working
20 as a physician in any other correctional facility during your
21 time at DOCCS?

22 A. Yes.

23 Q. What other correctional facility?

24 A. Shawangunk and Sullivan.

25 Q. Sullivan was the first correctional facility you began

N961ALL3

Mueller - Direct

1 working at?

2 A. Yes.

3 Q. What year was that?

4 MS. THOMAS: I believe it was 1993.

5 Q. And during your time—and then you went to Shawangunk.

6 A. Yes.

7 Q. And were you the facility health service director at
8 Shawangunk?

9 A. Yes.

10 Q. And is it accurate that you were also the only medical
11 provider at Shawangunk when you were there?

12 A. Yes.

13 Q. During your time providing direct patient care at Sullivan,
14 Shawangunk, and Wallkill, did you prescribe medication to your
15 patients?

16 A. Yes.

17 Q. And in prescribing medications, did you ever have to submit
18 any form to any regional medical director or any supervisor
19 above you to be allowed to prescribe that medication to a
20 patient?

21 A. Yes.

22 Q. And under what circumstances did you have to submit
23 paperwork to get approval?

24 A. For any nonformulary medication.

25 Q. And can you explain what a nonformulary medication was, or

N961ALL3

Mueller - Direct

1 is.

2 A. Pharmacies, be it hospitals or insurance companies,
3 whatnot, have certain medications that they keep on formulary.
4 They are the medications they would prefer you prescribe
5 because that's what they have. You can't have every medication
6 in a certain class on formulary, so to speak.

7 Q. Okay. In regards to pain medication back when you were
8 working as a direct care provider, do you recall what classes
9 or types of medications were considered nonformulary?

10 A. I don't think that there is—there's always something in a
11 class that's formulary, so I'm not quite understanding the
12 question.

13 Q. That's fair. It was a bad question.

14 Was Neurontin, back when you were a direct care provider, a
15 formulary or nonformulary drug?

16 A. I believe it was formulary.

17 Q. Was it your practice—or strike that.

18 While you were providing direct patient care did you ever
19 prescribe any patient Neurontin?

20 A. I don't remember.

21 Q. Okay. Do you have any—strike that.

22 Can you describe briefly your medical education and
23 background.

24 A. You mean where I went to medical school?

25 Q. Yeah.

N961ALL3

Mueller - Direct

1 A. I went to New York Medical College. I was a physical
2 therapist for several years, then due to exposures and whatnot,
3 I decided I wanted to go to medical school. And then I
4 completed a residency in general surgery.

5 Q. What year was that?

6 A. 1990.

7 Q. And after your residency did you practice?

8 A. Yes.

9 Q. Where?

10 A. In Georgia, and in Liberty, New York, and in Newburgh, New
11 York.

12 Q. And what type of medicine did you practice?

13 A. General surgery.

14 Q. Do you have any board certifications?

15 A. I was board certified in general surgery, but when you're
16 due for recert, part of the process has to be your operative
17 log, and since I no longer operate, my certification has
18 expired.

19 Q. Okay. So when did your certification expire?

20 A. I don't know.

21 Q. Was it before the time that you became an RMD?

22 A. Yes. I—I believe so.

23 Q. Did you ever get any specialty training or certifications
24 in pain management?

25 A. No.

N961ALL3

Mueller - Direct

1 Q. And it's true, as you sit here today, you don't consider
2 yourself an expert in anything, right?

3 A. I don't really know what that question means.

4 Q. Well, do you remember taking a deposition in July 28, 2023?

5 A. Yes.

6 Q. With a court reporter there?

7 A. Yes.

8 Q. And you were sworn to tell the truth?

9 A. Yes.

10 Q. Do you remember being asked these questions and providing
11 this answer:

12 MS. KILEY: Could you give us the page and line
13 number, please.

14 MR. MORRISON: It's page 54, line 24.

15 Q. "Q. Would you consider yourself an expert in anything?"

16 Mr. Ramage, your attorney, objected. Your answer: "No."

17 Do you remember being asked that question and you provided
18 that answer?

19 A. You've just refreshed my memory. Thank you.

20 Q. Okay. So would you agree that as you sit here today, you
21 don't consider yourself an expert in anything?

22 A. I guess officially speaking, yes.

23 Q. Okay. I want to direct your attention right to it, back to
24 2015, okay? And you were an RMD in 2015, right?

25 A. Yes.

N961ALL3

Mueller - Direct

1 Q. And do you remember being asked to participate in something
2 called the narcotics review committee?

3 A. Are you referring to the Green Haven?

4 Q. I am.

5 A. Oh, yes.

6 Q. Okay.

7 A. I didn't know it by that name.

8 Q. What name did you know it by?

9 A. I guess I don't really remember any particular name, but
10 yes.

11 Q. Okay. How did you come to learn that you—strike that.

12 How were you asked to participate in the narcotics review
13 committee?

14 A. I believe the CMO asked me.

15 Q. And who was the CMO at the time?

16 A. Dr. Koenigsmann.

17 Q. And can you describe what the narcotics review committee
18 was.

19 A. There were three—three RMDs; and the facility health
20 service director—this is at Green Haven—I think a pain
21 medication nurse; Dr. Weinstein, a physiatrist. I'm not sure
22 who else might have been on the committee. It's quite awhile
23 ago. And per the direction of the then-commissioner, they
24 wanted us to review the patients who were on narcotics and
25 Neurontin because at the time the facility was crippled with

N961ALL3

Mueller - Direct

1 medication lines that were running all day and in several
2 locations throughout the facility programs couldn't run, etc.,
3 etc., is how it was explained to me, so every patient who was
4 on any of these identified substances, medications, was
5 presented to the committee by their primary care provider;
6 their case was presented.

7 Q. Okay. So it's your understanding that this committee was
8 formed because Green Haven was being crippled with long
9 medication lines that was affecting programmings and things
10 like that.

11 A. That's what I was told.

12 Q. Okay. Who told you that?

13 A. I don't know if it was Dr. Koenigsmann, the superintendent
14 at the time? I don't recall exactly who told me, but those
15 would be my guesses.

16 Q. When you became part of this committee, were you provided
17 any data in regards to the amount of medications or narcotics
18 that were being prescribed at Green Haven?

19 A. No, but I wasn't the, shall we say, the head of the
20 committee. The RMD who was might have been.

21 Q. And who was that?

22 A. That was Dr. Bailey-Wallace. Green Haven was actually one
23 of her facilities.

24 Q. Was it your understanding during the committee that the
25 purpose was to review all the patients that are on narcotics

N961ALL3

Mueller - Direct

1 and try to see which ones you can get off?

2 A. Well, if that was a possibility.

3 Q. Okay. And isn't it also true that in addition to narcotic
4 medications, you were also tasked with reviewing every
5 prescription of Neurontin that was in Green Haven?

6 A. Yes.

7 Q. And how often as part of this committee would you go about
8 these presentations at Green Haven?

9 A. Weekly.

10 Q. For how long?

11 A. Months.

12 Q. And can you describe to the Court these presentations and
13 how they went about. Did that make sense?

14 A. I don't know.

15 Q. Okay. So can you describe the presentations that were
16 presented to the committee at Green Haven.

17 A. The provider whose patient was being presented—we sat in a
18 room with a big table—would come in, would have the patient's
19 chart, and would present the patient to the committee, and then
20 a discussion would ensue.

21 Q. During these presentations were you and other committee
22 members allowed to ask questions to the provider about the
23 patient?

24 A. Yes.

25 Q. During these committee meetings with the presentation, was

N961ALL3

Mueller - Direct

1 the patient itself, himself, ever brought in and asked any
2 questions?

3 A. No.

4 Q. Any reason why that didn't happen?

5 A. The provider met with the patient prior to and after each
6 of these meetings. As to why they weren't brought in, I don't
7 have the answer to that.

8 Q. And as a result—do you know roughly how many patients and
9 how many reviews occurred?

10 A. No. Dr. Bailey-Wallace would probably—would have had that
11 information because she was tasked with each week
12 sending—making and sending a report to the commissioner.

13 Q. Okay. Each day or once a week when you went to Green Haven
14 and did these presentations, roughly how many presentations
15 were done?

16 A. I don't know.

17 Q. Prior to starting were you provided any data—strike that.
18 I've already asked that.

19 As a result of the narcotics review committee, would you
20 agree that numerous patients at Green Haven were discontinued
21 from medications that they were previously on?

22 A. I honestly don't know. I wasn't tracking it.

23 Q. Okay. If you can take a look, there should be a document
24 that's marked Exhibit 138.

25 A. That's not in this book, is it?

N961ALL3

Mueller - Direct

1 Q. No. It's right to your—

2 THE COURT: It's on the side bar right next to you on
3 your left, ma'am. Yes, ma'am.

4 A. Sorry.

5 Q. No problem.

6 Dr. Mueller, if you can take a moment and just flip through
7 this document quickly. And let me know if you recognize it.

8 A. No, I never saw this.

9 Q. Okay. Well, do you remember seeing it at your deposition?

10 A. Oh, at the deposition? Yes.

11 Q. Okay.

12 A. Sorry.

13 Q. And do you remember discussing it and this being a printout
14 or a chart of meeting dates and inmates that were reviewed?

15 A. I recognize it as such.

16 Q. Okay. And it looks like we have—don't worry. I'm not
17 going to go through each meeting.

18 But on the first page up at the top, it says 4/15/2015.
19 The next page, 4/21/2015 date.

20 A. Yes.

21 Q. And this reflects those patients that were reviewed on each
22 meeting date for those dates; would you agree?

23 A. It would appear as such.

24 Q. Okay. And without going—well, going through the chart,
25 the sixth column has medications, and it lists the medications

N961ALL3

Mueller - Direct

1 that are associated with each inmate, correct?

2 A. Yes.

3 Q. And then on the column to the right of that, it says Final
4 D/C Date, right?

5 A. Yes.

6 Q. What does D/C mean to you?

7 A. Discontinue.

8 Q. Okay. And in this first page, there are 16
9 inmates—correct?—listed.

10 A. Oh, the first page. I'm on the second. Sorry.

11 Yes.

12 Q. And of these 16 inmates, all but one have a final
13 discontinue date for the medications associated with them; is
14 that accurate?

15 A. Which is the one?

16 Q. Looks like No. 4, Baez?

17 A. Okay. Yes.

18 Q. And this would reflect that each 15 of the 16 patients that
19 were discussed on April 15, 2015, resulted in a final
20 discontinuation date for their medication. Would you agree
21 with that?

22 A. Yes.

23 Q. Okay. And if you flip to the next page.

24 For April 21, 2015, there's 15 patients listed, two of them
25 discussed during the meeting; is that accurate?

N961ALL3

Mueller - Direct

1 A. Yes.

2 Q. And of those 15 patients, if you look to the final
3 discontinue date column, it looks like there are only two that
4 do not have a final discontinuation date listed; is that
5 accurate?

6 A. I'm still looking.

7 Q. Sure. And I'll direct your attention to Boone, No. 2, and
8 Ruiz, No. 12.

9 A. Well, I'm seeing on No. 3, it says, "Keep Neurontin," "Keep
10 Neurontin, MS Contin" on No. 3.

11 Q. There in the comment section?

12 A. No. 1, it says, "Keep Neurontin"; No. 3, "Keep Neurontin
13 and MS Contin," yes.

14 Q. Okay. Fair. No. 6, to be fair, says "Keep Neurontin" as
15 well, right?

16 A. No. 6. I haven't gotten any further.

17 Q. Okay.

18 A. Okay.

19 Q. So but it's true—strike that.

20 Looking at just these first two meeting dates, does it look
21 to you that the majority of the individuals that were discussed
22 in the presentations did result in the discontinuation of their
23 medications?

24 A. Yes.

25 Q. And instead of going over each page, if you want to turn to

N961ALL3

Mueller - Direct

1 the last page of this exhibit, which is marked 138, it has a
2 chart breakdown, first column having meeting dates, the second
3 column discontinued date, or discontinued, the next column
4 weaning. What does weaning mean?

5 A. Tapering a dose, lowering.

6 Q. Okay. Does it mean tapering and lowering till taking them
7 off?

8 A. Usually it does.

9 Q. Okay. And then it says keep, which, do you know what keep
10 means?

11 A. Continue the medication.

12 Q. Okay. And the total at the bottom has 196 discontinued, 4
13 weaning, 11 keep, correct?

14 A. Yes.

15 Q. Now looking at this document, and this breakdown, would you
16 agree that the majority of the individuals that were reviewed
17 from April 15, 2015, to June 9, 2015, were discontinued from
18 their medication?

19 A. Yes. And it should be noted that word gets out in
20 facilities pretty quickly when something's going on, and a lot
21 of—we were told that quite a few of the incarcerated
22 individuals who were on these medications were coming to their
23 providers proactively and saying "Take me off of it," because
24 in reality, they weren't taking the medication themselves, they
25 were being hit up—upon by other incarcerated individuals for

N961ALL3

Mueller - Direct

1 the drug.

2 Q. Do you have any documentation to support what you just
3 stated?

4 A. No.

5 Q. Where did you learn this information from?

6 A. From the primary care providers there at Green Haven.

7 Q. Okay. You never—none of these patients that you allege
8 stated to the provider that they wanted to be taken off this
9 medication told this to you.

10 A. No. I didn't speak to any of the patients, so this was not
11 direct—a patient did not speak to me, no. It was their
12 provider relaying the information.

13 Q. And according to you, you learned this information during
14 the provider's presentation?

15 A. Yes.

16 Q. Okay. Which provider told you that?

17 A. Oh, I think it was—it might have been all of them. There
18 were—a lot of the incarcerated individuals who had been on
19 these medications had been on them for a long time, and the
20 providers weren't even seeing them. It was just automatic
21 renewals without seeing the patient.

22 Q. So if the provider wasn't ever seeing the patients, how did
23 the patient inform the provider that they wanted to get off
24 their medication?

25 A. Because when the word got out that this—all of the cases

N961ALL3

Mueller - Direct

1 were being reviewed and whatnot, they came proactively and
2 said, "Take me off of it."

3 Q. Well, isn't it also accurate that patients at Green Haven
4 or any facility aren't forced to take medication?

5 A. They weren't taking it themselves. It was being—they were
6 obtaining it for the other incarcerated individual who was
7 pressuring them to get the medication to divert it to him.

8 Q. Which patient did this occur to?

9 A. Oh, I don't know. I'm sorry.

10 Q. Okay. So would you agree that as a result of the narcotics
11 review committee, the lines at Green Haven in regards to
12 medication decreased?

13 A. I don't know.

14 Q. Did you ever come to learn any positive or negative
15 response from the commissioner's office in regards to the
16 narcotic review committee's work?

17 A. No, because I wasn't the RMD in charge, so any
18 communication was between that RMD and the commissioner.

19 Q. Were you, as part of the narcotics review committee, ever
20 part of reviewing or creating a final report for the
21 commissioner?

22 A. No.

23 Q. And do you consider the narcotics review committee to be a
24 successful endeavor?

25 A. According to their superintendent and even some of the

N961ALL3

Mueller - Direct

1 providers who were involved, they felt that it was.

2 Q. And do you feel like the narcotics review committee was a
3 successful endeavor?

4 A. Well, if the people that were working there felt it was, by
5 virtue of that, I guess I would say it was.

6 Q. Did you have any communication or have you ever spoken to
7 any of the patients who were subject to the narcotics review
8 committee's presentations who lost their medication, of whether
9 they believed it was successful?

10 A. No.

11 Q. After—let me ask you this: So after the presentation how
12 did the determination from the narcotics review committee of
13 whether to discontinue or continue medication occur?

14 A. Could you repeat that.

15 Q. Sure. Following the presentation of the provider, he comes
16 in, he has his, or her—has the chart of the patient, questions
17 are asked back and forth regarding the patient's medications.
18 How did it come—how did the committee make their determination
19 of whether the patient should continue on the medication or be
20 discontinued?

21 A. It was a group discussion.

22 Q. Pardon?

23 A. It was a group discussion and determination.

24 Q. Was the provider involved in the group discussion or was
25 it—

N961ALL3

Mueller - Direct

1 A. Yes.

2 Q. Okay. And how long did those group discussions occur?

3 A. How long did it—

4 Q. Yeah.

5 A. I can't tell you that.

6 Q. Were they short, ten minutes, five minutes, 30 seconds?

7 A. It all depended on the case.

8 Q. Okay. And what type of issues were discussed?

9 A. What treatments had been, you know—what kind of testing

10 might have been done for that particular incarcerated

11 individual; what treatments had the incarcerated individual

12 undergone—physical therapy, perhaps pain management

13 injections, orthopedic or neurology, neurosurgery,

14 consultations, different—what other medications had been

15 trialed.

16 Q. How about the effectiveness that the medication has on the
17 patient?

18 A. You just went—okay. You went dead.

19 Q. Sorry. Is it working?

20 A. Yes.

21 Q. Okay. Was the effectiveness of the medication on the
22 patient discussed during the determination?

23 A. Yes.

24 Q. And if the medication was effective in treating the pain of
25 the patient, did you keep the patient on the medication?

N961ALL3

Mueller - Direct

1 A. I don't—I can't—I can't really answer that because each
2 case was different.

3 Q. Okay. Well, under what circumstances where the discussion
4 resulted that the patient was being effectively treated by the
5 medication would result in that medication being discontinued?

6 A. Hypothetically an example could be where some diagnostics
7 needed to be performed to see if there would be a more
8 effective treatment for the patient, or in some of these cases
9 the provider themselves might have said, I don't think that he
10 needs this. This wasn't a one-sided determination or decision.
11 The provider was part of the decision-making process.

12 Q. Okay. Well, was there ultimately a vote? What happens if
13 one person on the committee thought that he should keep the
14 medication, another person thought he shouldn't keep the
15 medication?

16 A. I guess you need a tiebreaker. I'm not trying to be—

17 Q. A typewriter?

18 THE COURT: Tiebreaker.

19 A. Tiebreaker. But I'm not trying to be smart, you know, or
20 disrespectful.

21 Q. Okay. No, no, no. That actually helps me.

22 So there was a vote after the discussion.

23 A. I don't recall formal votes, just discussions, and then
24 everybody would seem to come—in my recollection, seem to come
25 to the same consensus.

N961ALL3

Mueller - Direct

1 Q. Okay. And all of these discussions were done outside of
2 the presence of the patient himself, right?

3 A. Yes.

4 Q. And you mentioned something in regards to if the proper
5 testing wasn't done for a patient that the medication would be
6 discontinued until that testing was completed; is that
7 accurate?

8 A. I think that's why some of them might have had, you know,
9 "Keep Neurontin" or whatnot, while things were pending.

10 Q. Okay. Because you would agree that discontinuing a
11 medication because proper testing wasn't done or in the file
12 would not be appropriate if that medication was effective for
13 the patient.

14 A. Yes.

15 Q. To your knowledge was the narcotics review committee ever
16 instituted in any other correctional facility?

17 A. Not to my knowledge.

18 Q. In any of your correctional facilities did you ever do an
19 independent review of the amount of prescription narcotic drugs
20 or Neurontin being prescribed?

21 A. No.

22 Q. Did you ever have a concern about the amount of Neurontin
23 or prescription drugs being prescribed?

24 A. The—in some facilities, SURNs—which are senior
25 utilization review nurses—had done audits, and thought that

N961ALL3

Mueller - Direct

1 there was an excess number—not excess—too high a number of
2 patients receiving Neurontin, but that wasn't RMD directed and
3 it wasn't at all facilities.

4 Q. As the clinical supervisor, an RMD, of the facilities and
5 the providers, you never were concerned about the amount of
6 narcotics or Neurontin medications being prescribed; is that
7 accurate?

8 A. Not in my role as an RMD, no.

9 Q. You didn't think that—

10 THE COURT: No, you were not concerned?

11 Repeat my question.

12 Q. "No, you were not concerned?"

13 A. If it was brought to my attention. Sometimes there were—I
14 can think of—I can think of one facility offhand where a SURN
15 had completed a Neurontin audit and there was concern, and they
16 made a QI project out of it.

17 Q. Okay. Before that SURN or indication to you that there
18 was, they believed, a high amount of Neurontin being prescribed
19 in that facility, did you have any concern?

20 A. No, because I would have no way of being aware of how much
21 Neurontin was being prescribed in a facility.

22 Q. You never received any complaints from any provider or
23 anyone regarding that before that SURN report.

24 A. Not that I recall.

25 Q. Okay. And you didn't take any action to try to reduce the

N961ALL3

Mueller - Direct

1 amount of prescriptions or the prescription habits of any
2 provider before the SURN reports—would that be accurate?—in
3 any of your facilities?

4 A. Correct.

5 Q. At some point in time—I want to move on to the MWAP
6 policy, okay?

7 At some point in time you came to learn that a new policy
8 was being formed, formulated in regards to how certain
9 medications would be prescribed; is that accurate?

10 A. Yes.

11 Q. And that was called the MWAP policy, right?

12 A. Yes.

13 Q. Who, to your understanding, was charged with drafting that
14 policy?

15 A. Dr. Dinello.

16 Q. Do you understand why Dr. Dinello was charged with drafting
17 that policy?

18 A. I assumed it was because he was the head of the pharmacy
19 and therapeutics committee and also because he worked on the
20 outside in addiction medicine.

21 Q. Do you remember the first time you learned that this policy
22 was starting to formulate within DOCCS?

23 A. Do you mean like a date?

24 Q. Roughly. Like 2016—how long after the narcotics review
25 committee ended?

N961ALL3

Mueller - Direct

1 A. I don't know.

2 Q. Do you remember being involved in discussions about the
3 formulation of that policy?

4 A. Not the specific formulation, but we had discussions at RMD
5 meetings about perhaps having a policy created.

6 Q. Were you advocating for that policy?

7 A. Yes.

8 Q. Okay. And why were you advocating for that policy?

9 A. Because at the time, this was a time when the opioid
10 epidemic was big-time national news, laws were changing with
11 how prescription, you know, prescriptions can be written, and
12 the SURN audits that were done were discovering what they
13 thought to be overprescription of Neurontin, so yes, so I
14 thought that maybe we needed to do something.

15 Q. Okay. You said laws were changing. Was it your
16 determination that the prescriptions of medication within DOCCS
17 by your providers were breaking laws?

18 A. Well, the DEA changed the law that you could only prescribe
19 an opioid for three days for acute pain, so up until that
20 point, yes, it was—they were being prescribed for longer than
21 three days.

22 Q. Other than the three days of this new law that you allege
23 occurred, any other laws that were being broken by your
24 providers at DOCCS?

25 A. No, not that I'm aware.

N961ALL3

Mueller - Direct

1 Q. Was the issue in the SURN reports, to your understanding,
2 about acute pain prescriptions or long-term prescription of
3 narcotics and Neurontin medications?

4 A. They were long-term prescriptions.

5 Q. Did you see data in regards to your hubs about the amount
6 of Neurontin medication or opioid medications being prescribed
7 to patients?

8 A. I—I remember that when I was talking about the one
9 facility where they brought up about the Neurontin, they had a
10 report, so it had numbers.

11 Q. And when you saw those—what facility was that?

12 A. That was Greene.

13 Q. And what were the numbers that—were you disturbed by the
14 numbers you saw?

15 A. I thought they seemed to be a little excessive.

16 Q. Okay. Were those numbers attached to any patients?

17 A. I don't recall.

18 Q. After you saw those numbers and you thought they were a
19 little extreme, did you do any investigation in regards to why
20 that many, those—that many prescriptions were being prescribed
21 at Greene Correctional Facility?

22 A. The facility made a QI project out of it, and the facility,
23 not with any of my involvement, met, I don't know how often.
24 For argument's—I don't know how often, but I think they met
25 weekly and discussed all the patients.

N961ALL3

Mueller - Direct

1 Q. Okay.

2 A. That was a facility committee, though, and I was not
3 involved with it.

4 Q. Okay. It was a QI project? What's a QI project, just to
5 be clear?

6 A. Quality improvement.

7 Q. And you had no involvement in the quality improvement?

8 A. Not in their QI, their Neurontin project, no.

9 Q. Okay. Tell me about the Neurontin project.

10 A. Not—their QI project, to evaluate their patients on
11 Neurontin.

12 Q. Okay. And how were they evaluating the—

13 A. I didn't participate in the committee, so I—I don't know.

14 Q. You had no concerns about what was going on? I mean, you
15 just saw the SURN report that you said had a disturbing amount
16 of Neurontin prescriptions coming out of Greene. You weren't
17 interested at all, you didn't think it was a bit important for
18 you as the RMD to follow up?

19 A. Well, there was follow-up because they presented the
20 findings of their committee meetings at the next QI meeting.

21 Q. Okay. But you weren't interested to be involved in that
22 and find out how they were evaluating these patients at Greene,
23 in prescriptions.

24 A. I was—it sounded to me, from what I was told by the
25 facility, that they had a, again, several members of their

N961ALL3

Mueller - Direct

1 group, and they were presenting each case, probably similar to
2 Green Haven, but I wasn't there so I can't say.

3 Q. You don't have any idea who was involved in this committee
4 or group that was reviewing the prescriptions out at Greene?

5 A. I do know that the facility health service director, the
6 nurse administrator, the deputy superintendent of
7 administration, and I don't know about the superintendent or
8 any other nurses. Those are who I do know.

9 Q. Why would the deputy superintendent of administration be
10 involved in reviewing the medications of patients?

11 A. Because that person supervises medical units.

12 Q. Okay. Was that person a doctor?

13 A. No.

14 Q. Same thing with the superintendent. Why would a
15 superintendent be involved in reviewing the prescription
16 medications of patients in the facility?

17 A. I don't know if the superintendent was involved.

18 Q. Okay. And as a result of that committee, would you agree
19 that Greene decreased the amount of Neurontin prescriptions
20 being prescribed to patients?

21 A. My recollection is they did.

22 Q. And this all occurred before the MWAP policy came into
23 effect; would you agree?

24 A. Yes. Yes.

25 Q. Do you know whether any of the patients involved in this

N961ALL3

Mueller - Direct

1 review were allowed to participate in the discussion and the
2 review of their prescriptions?

3 A. I don't know.

4 Q. As the RMD, you also do peer reviews of each physician that
5 works in your hub.

6 A. Yes.

7 Q. And you have been doing that since you became an RMD.

8 A. Yes.

9 Q. And I believe you testified before that that is—you take
10 that role seriously, right, that job?

11 A. Doing peer reviews?

12 Q. Yes.

13 A. I take it seriously, but it has no impact.

14 Q. Right. Well, I know you go to the facility, you spend the
15 day there, reviewing charts of a provider, right?

16 A. Yes.

17 Q. And then you go back to your office and you write the peer
18 review.

19 A. Yes.

20 Q. At any point in time did you ever write a peer review for
21 any doctor or nurse practitioner or provider criticizing them
22 for the amount of prescription medications they provide to
23 their patients?

24 A. No, and that's not part of the peer review.

25 Q. What's the peer review about?

N961ALL3

Mueller - Direct

1 A. It's checkmarks, when you are reading a chart, and
2 theoretically it's supposed to be about chronic care
3 appointments—for example, asthma—and there are certain things
4 that you have to check and see, did they do. So it has nothing
5 to do with prescription of narcotics, Neurontin, or anything
6 else.

7 Q. Isn't it true, that's the first half of the peer review
8 document and then there's another half where you can write a
9 narrative?

10 A. You can write a narrative, and the narrative I write is in
11 relation to the responses to those indicators.

12 Q. So in a narrative section of a peer review, it's true
13 you've never criticized a provider working in one of your hubs
14 for overprescribing medication.

15 A. I just don't address that.

16 Q. Okay. So you could address that if that was an issue,
17 though; you could put that in the peer review.

18 A. Never thought to.

19 Q. Have you ever raised, made a complaint or an allegation to
20 any provider during your time as an RMD that, you're
21 overprescribing certain medications?

22 A. Did I ever make a complaint?

23 Q. Correct.

24 A. I don't think complaint would be the word, but when it got
25 brought up, let's say, by an audit, I would speak to them about

N961ALL3

Mueller - Direct

1 it.

2 Q. Okay. Which audit and which provider are you speaking
3 about?

4 A. Neurontin audit. I don't think there were any other audits
5 that I—well, there weren't any that I was aware of.

6 Q. That was at Greene Correctional Facility.

7 A. Yes.

8 Q. And after that you brought it up with—what provider was at
9 issue?

10 A. What? Which provider was it?

11 Q. Yeah.

12 A. Dr. Smith. I don't know—I don't remember who else was
13 there then.

14 Q. What's Dr. Smith's first name?

15 A. Doreen.

16 Q. Doreen? And what were the numbers in regards to Doreen
17 Smith's prescriptions of Neurontin that concerned you?

18 A. I don't know.

19 Q. How did you raise that issue to Dr. Smith after you
20 determined that she was overprescribing or prescribing
21 Neurontin in an excessive amount?

22 A. It was discussed at the QI meeting.

23 Q. Was Dr. Smith there?

24 A. Yes. It's the—it's the facility health director's
25 meeting.

N961ALL3

Mueller - Direct

1 Q. Oh, she was the facility health service director at Greene.

2 A. Yes.

3 Q. And what did she—how did she respond to you informing her
4 that you are troubled by the amount of Neurontin prescriptions
5 she was providing to her patients?

6 A. Well, it wasn't me. It was the SURN giving the report.

7 Q. Okay. What did the SURN tell Dr. Smith?

8 A. I guess I really—this is a long time ago for me to
9 remember specifics for you, so I can just surmise how it
10 usually works at a QI meeting.

11 Q. Okay. Is it fair to say that after whatever the SURN
12 report said and was presented to Dr. Smith, that she would have
13 come away with the impression that she needs to reduce those
14 prescriptions?

15 MS. THOMAS: I would just object to the extent it
16 calls for someone else's impression, not Dr. Mueller's
17 impression.

18 THE COURT: Okay. Would you ask the witness if she's
19 able to answer the question.

20 MR. MORRISON: Sure.

21 BY MR. MORRISON:

22 Q. Did you understand that question and are you able to answer
23 it?

24 A. Can you repeat it.

25 Q. Sure. Actually, let me rephrase it.

N961ALL3

Mueller - Direct

1 You were at that quarterly—that QI meeting where the SURNs
2 informed Dr. Smith that they were concerned about the amount of
3 Neurontin prescriptions; is that accurate?

4 A. I would assume I was, 'cause I go to most of them.

5 Q. Okay. And after you saw and heard the SURN informing
6 Dr. Smith about this issue, were you under the impression that
7 Dr. Smith should be reducing the amount of Neurontin
8 prescriptions she was providing to patients?

9 A. What I—what I thought was, and what the—the members of
10 the meeting decided was, that it warranted a QI project to take
11 a look at—to take a look at the patients and the numbers.

12 Q. Okay. And was Dr. Smith involved in that QI, that
13 Neurontin project from the QI meeting?

14 A. Yes.

15 Q. And as a result, did she reduce the prescriptions of
16 Neurontin she was providing to patients?

17 A. I believe she did.

18 Q. Okay. And did you follow up after that in any way in
19 regards to the effects that had on the patients that Neurontin
20 prescriptions were discontinued?

21 A. No. That would have been Dr. Smith's doing.

22 Q. Okay. Was there any follow-up audit by SURNs in regards to
23 the effects of the Neurontin project?

24 A. I don't know.

25 Q. Were you interested ever to find out the effects that the

N961ALL3

Mueller - Direct

1 Neurontin project had on the patients at Greene Correctional
2 Facility that were prescribed Neurontin at one point?

3 A. Yes.

4 Q. And what did you do about those concerns?

5 A. Well, I—I can't say specifically. I would just be
6 conjecturing that I speak with Dr. Smith, and she was never shy
7 about voicing complaints about things she didn't agree with.

8 (Continued on next page)

N96Wall4

Mueller - Direct

1 BY MR. MORRISON:

2 Q. OK. And she didn't agree with the Neurontin project's
3 results, correct; that's fair to say?

4 A. I had the impression that she was satisfied with the
5 results.

6 Q. OK. So, after this Neurontin project at Greene, can you
7 describe how the MWAP policies -- strike that. Terrible.

8 Can you describe your role in the creation or drafting or
9 review of the MWAP policy before it was put into effect?

10 A. It was drafted by Dr. Dinello, and in my deposition, I
11 believe he said that there were, you know, emails exchanged
12 when he sent it around, does anybody have anything to say?
13 And -- because I didn't have any real recollection of any.

14 Q. What was your understanding of what the MWAP policy was
15 going to do in concerns with prescribing narcotic and Neurontin
16 medication to patients?

17 A. The hope was that more time would be taken carefully
18 evaluating patients and what treatment -- you know, what
19 diagnostics may not, may or may not have been done that needed
20 to be done, what other therapeutic options had been trialed or
21 not, and to kind of have people take a closer look at their
22 patients.

23 Q. It also involved the RMD taking control of whether
24 Neurontin or MWAP medications could actually be prescribed by
25 the provider to the patient?

N96Wall4

Mueller - Direct

1 A. Yes.

2 Q. Did you have any concerns about that part of the policy
3 while it was being drafted?

4 A. I think while it was being drafted, I -- I was hoping that
5 this was going to be, was hoping it was going to be a
6 successful -- and when I say successful, I don't mean in
7 discontinuing medications: I mean in seeing that a patient was
8 getting the appropriate care.

9 Q. OK.

10 A. Too often -- too often prescriptions are written either
11 without a patient being seen or just to get them out of the
12 office without examining the patient and exploring, like I say,
13 what really maybe needs to be done for this specific patient.
14 And that can include diagnostics and other modalities, such as
15 physical therapy, pain management.

16 Q. OK. So at around -- in 2016 and 2017, did you believe
17 there was a rampant problem within DOCCS and its medical
18 providers of not physically assessing their patients before
19 prescribing or making prescription determinations?

20 A. I was having -- had a feeling that that was the case.

21 Q. And what was that feeling based on?

22 A. You get to know -- you get to know your providers, and you
23 get -- you kind of know who is really taking the time with the
24 patient. And it's more difficult and time-consuming, but you
25 can take -- you know, you know that there are those that were,

N96Wall4

Mueller - Direct

1 but there also were those that weren't.

2 Q. And did you counsel those providers that you thought
3 weren't taking care or seeing or assessing their patients about
4 that?

5 A. Yes.

6 Q. And how -- how many providers did you counsel?

7 A. Oh, let's see. One, two -- it's hard for me to recall now.
8 I'm just trying to -- I would be guessing if I said ten. I
9 probably need more time to --

10 Q. OK. Roughly ten, maybe more, maybe less?

11 A. Maybe more.

12 Q. Maybe more.

13 And how many providers -- and at that time -- strike that.

14 Just to be clear, at that time, how many hubs were you the
15 RMD over? I know it's not as many as today.

16 A. Two.

17 Q. Which ones were that, were they?

18 A. Sullivan and Great Meadow.

19 Q. And how many providers were you supervising or in those two
20 hubs at that time, roughly?

21 A. 20.

22 Q. So about half?

23 A. But --

24 Q. Sorry.

25 A. But that's a really rough estimate.

N96Wall14

Mueller - Direct

1 Q. OK. So you believe it was about half of the providers at
2 the time not providing and not conducting individual
3 assessments of their patients before prescribing medication; is
4 that accurate?

5 A. I know that I said that, but I would have to spend more
6 time trying to think back as to who everybody was at the time.

7 Q. So when -- and at this time the MWAP policy is being
8 formulated, discussions are going back with Dr. Dinello and
9 yourself and other RMDs about formulating this policy, right?

10 A. Yes.

11 Q. And did you ever stop and say, you know, there's -- half of
12 my providers are doing a fine job, why are we going to subject
13 and take away their ability to prescribe medication without my
14 approval? Did you ever bring that up?

15 A. No, but I think that they were going to do the job
16 regardless, and they would most likely be prescribing things
17 and providing information on the form supportive of their
18 request.

19 Q. And which providers, just name -- if you can name three
20 providers at the time that you felt were prescribing
21 medications correctly, with assessments of their patients and
22 no issues?

23 A. Oh, geez. Dr. Genovese. Dr. Makrim. Dr. Lavvio.

24 Q. Where was Dr. Genovese working; which facility?

25 A. She was at Wallkill.

N96Wall4

Mueller - Direct

1 Q. And Dr. Makrim?

2 A. Woodbourne.

3 Q. And the last one was -- I'm sorry. I wrote it down. I
4 can't read my writing.

5 A. Lavvio.

6 Q. Lavvio. Where was --

7 A. Ulster.

8 Q. Now, we've identified three that you had no concerns about.
9 Can you name me three that you were concerned about?

10 A. Dr. Lee.

11 Q. And where was Dr. Lee?

12 A. Shawangunk.

13 Dr. Andola.

14 Q. Where was Dr. Andola?

15 A. Eastern.

16 And -- I'm trying to think back to the facilities. Sorry.

17 I don't remember who was at Sullivan then. Doctor -- he
18 was at Cocksackie. There were two of them there. He's been
19 gone for quite a while.

20 Q. OK. That's OK. So Dr. Lee and Andola were two that you
21 remember that you were concerned and had an issue with them
22 overprescribing Neurontin and medications?

23 A. Dr. Miller at Cocksackie.

24 Q. To your knowledge, does Dr. Lee still work at -- for the
25 Department of Corrections?

N96Wall4

Mueller - Direct

1 A. I believe he does not.

2 Q. Dr. Andola?

3 A. She left and just came back.

4 Q. Were you part of her hiring process when she returned?

5 A. No.

6 Q. How about Dr. Miller?

7 A. What?

8 Q. Is he still working at DOCCS -- he?

9 A. No.

10 Q. Is Dr. Miller a he or she?

11 A. He.

12 Q. So, upon learning, having these concerns, first, how --
13 what raised your concerns about these three providers
14 specifically? Did you get data, or was it based on something
15 else?

16 A. I don't get data.

17 Q. So is it fair to say while this, you were participating in
18 it remotely, you weren't drafting it, you weren't doing what
19 Dr. Dinello was doing, all of your recommendations and
20 suggestions regarding the MWAP policy were all done based on no
21 data? Is that fair?

22 A. I think the only recommendation that I made was to make
23 sure he included about the three-day limit on a narcotic
24 prescription for acute pain, because that had just come down
25 from the DEA.

N96Wall4

Mueller - Direct

1 Q. OK. But that wasn't agreed upon, right? Because wasn't it
2 a five-day emergency supply agreed upon?

3 A. Yes, but that didn't necessarily mean acute pain.

4 Q. OK. At any point in time, were you aware of whether a pain
5 specialist doctor or someone with some sort of specialty in
6 pain management was part of the process of creating the MWAP
7 policy, which came to be known as policy 1.24?

8 A. I don't know if Dr. Dinello consulted with any pain
9 management people.

10 Q. OK. Did you consult with any pain management people at any
11 point in time about the policy?

12 A. No, I don't think so.

13 Q. How about when you were reviewing -- after the policy was
14 implemented and you were reviewing medication requests, did you
15 ever consult with any pain management specialists of whether
16 you should approve or deny a prescription being presented to
17 you?

18 A. I know there were times that I consulted with orthopedic
19 surgeons and neurologists, but I don't specifically recall if I
20 ever consulted with a pain management person.

21 Q. You would call -- strike that.

22 You would consult with orthopedic specialists or
23 neurologists when you're determining to approve or deny an MWAP
24 request?

25 A. Yeah -- yes.

N96Wall4

Mueller - Direct

1 Q. How would you do that?

2 A. It's by phone.

3 Q. OK. Which neurologist would you call on the phone?

4 A. Dr. Nancy Mueller.

5 Q. And Dr. Nancy Mueller is your sister, right?

6 A. Yes.

7 Q. How often would you call your sister, Dr. Mueller,
8 regarding an MWAP request that was being presented to you?

9 A. I don't know.

10 Q. More than once?

11 A. Yes.

12 Q. OK. More than ten times?

13 A. Probably.

14 Q. OK. And when you had consulted with your sister,
15 Dr. Mueller, about this, do you remember what was the ultimate
16 conclusions? Would they be normally approved?

17 A. I don't recall.

18 Q. Under what circumstances would you want to consult with
19 your sister, Dr. Mueller, in regards to an MWAP request?

20 A. I don't -- I don't remember what was going, what the
21 requests were at the time, what was going through my mind.
22 Might have been looking for some expertise that I don't have in
23 the field or with medications.

24 Q. Because it's fair to say that you have never been and never
25 held yourself out as an expert in what pain medication is good

N96Wall4

Mueller - Direct

1 for certain chronic pain conditions or neuropathies of
2 patients?

3 A. Well, I think I have a pretty fair knowledge of what
4 medications are indicated for neuropathies.

5 Q. OK. So -- oh. What -- you said it was, a neurologist
6 would be your -- Dr. Nancy Mueller, who you would consult on
7 times; and what was the other specialty? An orthopedic. What
8 orthopedic would you --

9 A. Orthopedic surgeon.

10 Q. Who?

11 A. Dr. Francis Pflum.

12 Q. And who is Dr. Francis Pflum?

13 A. An orthopedic surgeon with specialty in spine.

14 Q. Does he have any position in DOCCS, or --

15 A. No.

16 Q. How do you know him?

17 A. From my work on the outside.

18 Q. A friend, colleague?

19 A. Colleague.

20 Q. And you would discuss MWAP requests and whether you should
21 approve it or deny it?

22 A. I wouldn't be asking should I approve or deny this. I
23 would be asking, you know, for additional information about
24 what the, per the diagnosis was and if he had other management
25 suggestions.

N96Wall4

Mueller - Direct

1 Q. Did your doctor -- your sister, Dr. Mueller, or Dr. Pflum
2 say, you know, maybe it would be a good idea you should go see
3 and talk to the patient?

4 A. I don't recall.

5 Q. Do you think it's a good idea whether to -- to determine
6 whether to prescribe or not prescribe the medication for a
7 patient to actually sit and speak with them?

8 A. In an ideal world, yes. But even with nonformulary
9 medications, we never got to speak with or meet with the
10 patient.

11 Q. Do you think it's a good idea to physically examine the
12 patient before whether -- before you decide whether to approve
13 or not approve a prescription medication for that patient?

14 A. I relied upon the physical examination conducted by the
15 primary care physician.

16 Q. A physical examination that you didn't conduct?

17 A. That the primary care physician conducted.

18 Q. OK. Do you think it's appropriate to prescribe medication
19 to -- or, strike that.

20 Do you think it's appropriate to determine whether a
21 prescription should be provided to a patient when you never
22 conducted a physical examination on the patient?

23 MS. THOMAS: Objection. This calls for expert
24 testimony.

25 THE COURT: Counsel.

N96Wall14

Mueller - Direct

1 MR. MORRISON: It's her opinion, her belief.

2 THE COURT: Ask the witness is if she's able to answer
3 the question, please.

4 MR. MORRISON: Sure.

5 Q. Are you able to answer that question?

6 A. The problem is the requesting primary care physician is
7 tasked with performing a physical examination, and more
8 times -- more often than not, they did not provide that. And
9 that was where the problem lay.

10 Q. OK. So it's fair to say that you were, on many occasions,
11 disapproving a primary care provider's request for Neurontin or
12 an MWAP medication because the form didn't include the physical
13 examination?

14 A. The physical examination and other information too that may
15 have been pertinent to that request.

16 Q. OK.

17 A. And I would reach out to the requesting provider, either by
18 email or phone, saying, you know, I need this information. And
19 if they didn't furnish it, unfortunately, there was no pend
20 option on the form. So it would end up having to be a denial,
21 where if the information had been furnished, it very well could
22 have been an approval.

23 Q. OK. So you would get a form that, to your determination,
24 isn't complete to allow you to approve the medication, and you
25 would pick up the phone and call the provider and tell him or

N96Wall4

Mueller - Direct

1 her what is incomplete in that form?

2 A. Yes. Either phone or email.

3 Q. OK. And when you're on the phone with the provider, can't
4 the provider then just tell you what's -- what the information
5 you needed?

6 A. I have to get the chart or I have to see the patient. No,
7 they didn't necessarily -- they did not provide me with the
8 information.

9 Q. Did they ever -- at no point in time you call and say I
10 need the results of the physical exam and they'd say let me
11 pull the chart and tell you what they are and then you can
12 approve the medication?

13 A. If they provided it to me, yes.

14 Q. OK. And how often did that happen?

15 A. In my estimation -- well, I don't know.

16 Q. OK. So it's fair to say that if the form wasn't completed
17 to the way that you wanted it to be completed, you would have
18 to disapprove the medication?

19 A. Yes.

20 Q. And that was your practice. is that accurate, in reviewing
21 MWAP requests from providers?

22 A. If you don't have the pertinent information, you can't
23 make --

24 Q. And you understand by disapproving the medication means
25 that that provider cannot get that medication from the pharmacy

N96Wall4

Mueller - Direct

1 for the patient?

2 A. When I disapproved a medication, I wrote comments, and it
3 would be suggestions in absence of all of the information,
4 suggestions of alternative treatments, modalities and whatnot
5 that could be trialed.

6 Q. OK.

7 A. So it wasn't that the patient was being left without
8 treatment.

9 Q. The patient was being left without the treatment that the
10 provider was requesting; you would agree with that?

11 A. Without that medication, unless they resubmitted with the
12 information that was necessary.

13 Q. Right. Well, I'm not talking about any resubmissions. I'm
14 talking about the form that comes in that, according to you,
15 isn't filled out properly so you have to not approve the
16 medication. Right? You were aware that by saying not
17 approved, that that provider couldn't provide that medication
18 and prescribe that medication from the pharmacy to the patient?

19 A. Yes.

20 Q. And oftentimes, with these requests that you deemed were
21 not properly completed were for renewals of prescriptions;
22 would you agree with that?

23 A. I don't -- I don't really understand the question.

24 Q. All right. Well, let's -- you have a -- there's a big
25 binder in front of you, which has been marked for the purposes

N96Wall4

Mueller - Direct

1 as Plaintiffs' Exhibit -- sorry -- 76, I believe.

2 MS. AGNEW: It's 76.

3 MR. MORRISON: Yeah, 76.

4 Q. Do you have that in front of you?

5 If you can turn to --

6 THE COURT: Counsel, would you ask the witness if the
7 witness needs a break.

8 MR. MORRISON: Sure.

9 Do you need a moment? Do you need a break?

10 THE COURT: Tell us when you do.

11 MR. MORRISON: Yeah.

12 THE COURT: No, no. You're supposed to say that.

13 MR. MORRISON: Oh, tell us when you --

14 If you need a break anytime, let me know; we'll take a
15 break. OK?

16 Q. OK. If you can turn to the, in the upper part of this
17 document, in these documents there's -- it says Mueller MWAP
18 and a number. If you can turn to No. 18.

19 A. I have a 17 and a 19. Oh --

20 Q. OK.

21 A. Sorry. Got it.

22 Q. A lot of pages here.

23 If you can look at 18 and 19 and let me know if you
24 recognize what this document is.

25 A. I'm surprised that my name is on it. It's Green Haven.

N96Wall4

Mueller - Direct

1 Q. Well, what is this document?

2 A. Oh. It's an MWAP. I'm sorry.

3 Q. OK.

4 A. Sorry.

5 Q. No problem.

6 And this was a document that was formed as a result of
7 policy 1.24, right?

8 A. Yes.

9 Q. OK. And just briefly, the -- let's -- the second -- it
10 says housing location SHU. What does that mean?

11 A. Special housing unit.

12 Q. OK. And this request is from -- is for a patient by the
13 name of Hardley Silus, right?

14 A. Yes. Yes.

15 Q. OK. And it says a rationale for GP. What does that mean,
16 rationale for GP?

17 A. General population.

18 Q. OK. And it says neuropathy. What does that -- when you
19 were reading these documents, what does that mean to you?

20 A. I think it usually was meant that if this was, for
21 instance, an opioid, whether they should be in a specialized
22 unit, like an infirmary, or whatnot.

23 Q. OK. But do you know why it says neuropathy there? How did
24 you interpret that?

25 MS. THOMAS: Objection. Just to the extent that it

N96Wall4

Mueller - Direct

1 assumes that she did interpret that.

2 A. I don't know how to interpret it. It's not the kind of --
3 I wouldn't have filled it out that way.

4 Q. OK. Well, let me -- I guess that's a fair point. Did you
5 review this document and make a determination whether to
6 approve or deny the request coming in for gabapentin?

7 A. I don't know. That's why I say, because it's Green Haven,
8 so I'm not sure.

9 Q. OK. OK. Let's -- just so the record's clear, let's look
10 at -- if you can flip to Mueller MWAP page 20, just one page
11 over, we'll try another one. Take a look at this document and
12 let me know if this is a MWAP request form that you made a
13 determination of whether to approve or deny.

14 A. Probably not. It's Taconic.

15 Q. It's to what?

16 A. It's probably not. It's Taconic.

17 Q. OK.

18 OK. Let's -- let me find one that there's no question.
19 Let's go to Mueller MWAP page 28.

20 A. OK.

21 Q. This is for a medication with abuse potential request form
22 for a Mr. Aaron Dockery from Shawangunk Correctional Facility,
23 right?

24 A. Yes.

25 Q. The date of this request was August 8, 2018, right?

N96Wall4

Mueller - Direct

1 A. It says August 19 -- oh, that's his date of birth.

2 Yes.

3 Q. Now, reviewing these -- it's two pages, 28 to 29 -- is this
4 a MWAP request form that you reviewed?

5 A. I would assume so. It's one of my facilities.

6 Q. OK. And your name is on the bottom as the name of the RMD,
7 right?

8 A. Yes.

9 Q. And do you recall -- do you know who Mr. Aaron Dockery is?

10 A. I recognize the name.

11 Q. OK. Do you recognize ever being in the same room with him
12 and treating him or having any direct, providing any direct
13 care for Mr. Dockery?

14 A. No.

15 Q. And the prescriber from this form requesting an MWAP
16 medication of Neurontin was Dr. Lee, right?

17 A. Yes.

18 Q. And Dr. Lee was one of the providers that you mentioned
19 earlier that you had some concerns about?

20 A. Yes.

21 Q. When you reviewed MWAP forms submitted by Dr. Lee, were you
22 more -- did you provide more scrutiny on those forms than
23 other, to other providers that you didn't have any concerns
24 about?

25 MS. THOMAS: I would just object to the extent that

N96Wall4

Mueller - Direct

1 the witness could not recall if she did, in fact, review this
2 form and write in this document, and the question assumes that
3 she did.

4 THE COURT: I think it actually is a question more
5 generally. It begins, "When you reviewed MWAP forms submitted
6 by Dr. Lee."

7 MS. THOMAS: Understood.

8 THE COURT: Overruled.

9 MS. THOMAS: Thank you.

10 THE COURT: Yes, ma'am.

11 BY MR. MORRISON:

12 Q. When you reviewed forms submitted by Dr. Lee, did you
13 provide more scrutiny to his requests than other providers?

14 A. No.

15 Q. You held every provider to the same standard of review of
16 their MWAP requests?

17 A. Yes.

18 Q. By the way, who taught you or how did you learn to review
19 these MWAP request forms?

20 A. I don't know what you mean by that question.

21 Q. Well, when policy 1.24 came into effect, you were provided
22 this new responsibility of your job, to review these forms,
23 right?

24 A. Yes.

25 Q. Were you provided any training at all in how to review

N96Wall4

Mueller - Direct

1 these forms?

2 A. Not that I recall.

3 Q. Just told you're going to start getting forms to approve or
4 disapprove medication for patients; do what you want?

5 A. I don't know what -- do what you want?

6 Q. Well, there's no standard, there's no requirements that you
7 had to follow into whether making a determination to approve or
8 disapprove?

9 A. I think as physicians we know what needs to be done.

10 Q. What do you mean by that?

11 A. In other words, you review the form and then you review
12 everything you can on the computer and get as much information
13 as you can about each case, each request.

14 Q. OK. As a physician also you'd want to look at the medical
15 records, right?

16 A. Well, the records that we could see that were on the
17 computer, yes.

18 Q. OK. And you would agree that the -- you're talking about
19 the FHS1 system, right?

20 A. Yes.

21 Q. And you would agree that the FHS1 system is not the medical
22 records and complete medical chart of the patient?

23 A. Yes.

24 Q. You would agree that the FHS1 system is a scheduling tool,
25 for the most part?

N96Wall4

Mueller - Direct

1 A. No.

2 Q. What would you -- what would you categorize the FHS1 system
3 to be then?

4 A. It shows you all of the specialty consults, consultations
5 that the patient has had, what testing the patient has had,
6 what appointments at the facility the patient has had.

7 Q. It doesn't show the results of those testing unless they
8 were entered in, right?

9 A. Not if they weren't entered in.

10 Q. And oftentimes, one of the issues that you would have is
11 that providers don't follow up after the consultation comes
12 back with what the specialist recommended and the results;
13 fair?

14 A. Correct.

15 Q. OK.

16 A. And that's why they need to write that on the request.

17 Q. OK. Now, let's go back to the MWAP request of Mr. Dockery.
18 Do you have any reason to believe that you did not review and
19 make a determination on this MWAP request form?

20 A. Can I read it?

21 Q. Of course.

22 A. No.

23 Q. No? No what? I'm sorry.

24 Just to be clear, no reason to disbelieve that you didn't
25 review this and make a --

N96Wall4

Mueller - Direct

1 THE COURT: You had no reason to believe you didn't
2 review this.

3 MR. MORRISON: Correct.

4 OK. Now I'm really confused.

5 MS. AGNEW: I think there's a double negative.

6 THE COURT: Thank you.

7 A. I believe I reviewed this.

8 Q. Thank you. Thank you.

9 Then it was your determination not to approve, right?

10 A. Correct.

11 Q. OK. Let's go over this, try to do it quickly. The first
12 page, completely this first page, do you input any of the
13 information on this first page? And I'm speaking specifically
14 about page 28.

15 A. I'm sorry. What was the question?

16 Q. Sorry. The information on page 28, is that inputted into
17 this document by you?

18 A. No.

19 Q. OK. And it's fair to say the only input that you put in on
20 this document would be on page 29 in the reviewer comments and
21 the approval?

22 A. Yes.

23 MS. THOMAS: I would just object to the extent the
24 witness has not confirmed whether or not she has put those
25 comments in. So to the extent the question assumes that, I

N96Wall4

Mueller - Direct

1 would object.

2 THE COURT: All right. I think I'll take it for what
3 it's worth.

4 Go ahead.

5 BY MR. MORRISON:

6 Q. So in the first page, when you -- before you make a
7 decision, you read this whole form, right?

8 A. Yes.

9 Q. And do you see anything in this form that's missing in
10 regards to Dr. Lee's request to prescribe Neurontin to
11 Mr. Dockery?

12 A. He didn't fill out -- oh, actually, wait a second.
13 Physical exams and kind of updated information, he pretty much
14 parroted what had come to him from elsewhere. But other than
15 that, it's mostly filled out.

16 Q. When you say parroted what came to him from elsewhere, are
17 you referring to the section where it says requests for
18 consultation with specialty provider, and he marks yes; and
19 then it says if yes, specify specialty, he writes neurology,
20 continue Tecfidera and Neurontin for hand and feet neuropathy?
21 Is that what he parroted?

22 A. No. I was thinking more under treatment options.

23 Q. OK. Oh. So when you -- you think he parroted when he
24 says: Offender was transferred to C-O-X, Cox, which I assume
25 means Cossackie, infirmary RMU; was consulted to Dr.

N96Wall4

Mueller - Direct

1 Koenigsmann for Neurontin and approved; MRI confirmed presence
2 of multiple subcortical white matter lesions; Neurontin
3 discontinued on July 2018; now offender can't sleep times
4 several days due to pain in hands and foot neuropathy; used
5 walker for ambulatory, used to walk without a walker; tried
6 with Elavil, Tegretol, Cymbalta. Not effective.

7 You think he was parroting that information or he was
8 providing the information he became aware of as his provider?

9 A. It's hard for me to tell right now.

10 Q. OK. Did you believe the information in that treatment
11 option, TEP /step therapy section?

12 A. I guess some of it.

13 Q. What part didn't you -- did you believe that his Neurontin
14 was discontinued on July 2018 and now he can't sleep for
15 several days due to his pain in hands and foot neuropathy?

16 A. Nursing staff was coming forth with different -- with
17 conflicting information.

18 Q. Did you believe that Mr. Dockery was deteriorating after
19 his Neurontin was discontinued on July of 2018?

20 A. Medical staff other than Dr. Lee didn't think so.

21 Q. OK. So who did -- so according to you, you're getting
22 information about Mr. Lee -- Dr. Lee's request for Neurontin,
23 and you're speaking to nursing staff about his patient. Is
24 that accurate?

25 A. From my comments, it would appear that I had received

N96Wall4

Mueller - Direct

1 information from nursing staff.

2 Q. So if you're reaching out to nursing staff because, for
3 some reason, you don't trust or you don't believe what Dr. Lee
4 has wrote, why don't you just reach out to the patient himself
5 and talk to him?

6 A. It was probably the nursing staff that reached out to me.

7 Q. Probably, or are you just guessing?

8 A. I -- I don't remember, but the way things -- I don't -- I
9 wouldn't ordinarily reach out to the nursing staff like that.

10 Q. But you don't remember the nursing staff actually reaching
11 out to you about this request?

12 A. From what my comments were.

13 Q. Tell me where in your comments you believe you talked to
14 medical staff.

15 A. "According to medical staff, does not appear to be in pain
16 but rather malingering and drug seeking; strongly muscled;
17 started bringing walker to medical unit after Neurontin stopped
18 last month."

19 Q. And this is a man with multiple sclerosis, right?

20 A. But Neurontin doesn't treat multiple sclerosis.

21 Q. You're an expert in multiple sclerosis?

22 A. I'm not a neurologist, but Neurontin is not used to treat
23 multiple sclerosis. The Tecfidera is.

24 Q. Does Neurontin treat neuropathy in your feet?

25 A. It's been used for that, but it's an off-label use

N96Wall4

Mueller - Direct

1 currently.

2 Q. And it's been effective for some people, like Mr. Dockery.
3 Would you agree?

4 A. I don't know.

5 Q. And it's fair to say that you did not approve Mr. Dockery
6 being represcribed Neurontin following this MWAP request?

7 A. Yeah. I said I needed supportive diagnostics and suggested
8 alternative, safer treatment modalities.

9 Q. OK. Well, the fact that Dr. Lee put in he saw a
10 neurologist who recommended Neurontin for his hand and feet
11 neuropathy wasn't enough for you; is that fair?

12 A. I don't know that Neurontin was specifically recommended by
13 neurology.

14 Q. It says it right here on the form, Doctor. Page 28.

15 A. You mean where it says continue Tecfidera?

16 Q. And Neurontin.

17 A. And Neurontin. OK.

18 Q. For hand/feet neuropathy.

19 A. OK.

20 Q. It says that, right?

21 A. It says that on the form.

22 Q. OK. After you disapproved this request by Dr. Lee to treat
23 Mr. Dockery with Neurontin, did you follow up, you know, maybe
24 a week later to how Mr. Dockery was responding to any of these
25 alternative medications that you wanted him -- or strike that.

N96Wall4

Mueller - Direct

1 I don't even think you recommended alternative -- strike
2 that.

3 After you denied or not approved this MWAP form, did you
4 follow up on the condition of Mr. Dockery?

5 A. I don't know.

6 Q. Is that something you normally did after you failed to
7 approve or did not approve an MWAP request form, to follow up
8 with the patient?

9 A. Some of them I would -- some of the providers I would speak
10 with or email or I could look on FHIs to see if they had
11 ordered any testing.

12 Q. Did you do that with Dr. Lee? Did you call Dr. Lee and
13 say: Hey, I disapproved -- I didn't approve the Neurontin last
14 week; how's Mr. Dockery doing?

15 A. I don't recall.

16 MS. AGNEW: Your Honor, can we take five minutes?

17 THE COURT: Is it all right with you?

18 MR. MORRISON: It's fine with me.

19 THE COURT: All right. Would you inform the witness,
20 please.

21 MR. MORRISON: We're going to take a five-minute
22 break. Is that OK? Do you want a little longer?

23 (Recess)

24 THE COURT: Mr. Morrison.

25 MR. MORRISON: Before I begin, Judge, I do want to

N96Wall14

Mueller - Direct

1 move into evidence exhibit 138 and exhibit 72, which just the
2 pages Bates stamped Mueller MWAP 28 and 29 that we were just
3 discussing.

4 MS. THOMAS: Could I please start with exhibit 138?

5 I would object on foundation, as the witness had
6 testified that she hadn't recognized the document, didn't
7 remember seeing the document before, other than when it was
8 submitted to her at her deposition and had no other information
9 other than being walked through the contents of the document
10 rather than independent recollection of the document itself.

11 I'd also object on the grounds of relevance, as it
12 applies to a time period at least two years before the MWAP
13 period was enacted.

14 Those are my objections to 138.

15 MR. MORRISON: Your Honor, she agreed that these were
16 records reflecting the meetings of the narcotics review
17 committee. She testified about the documents, and our case is
18 stating that the policy of discontinuing medications began back
19 in 2015 as a direct result of this narcotics review committee.

20 (Continued on next page)
21
22
23
24
25

N961ALL5

1 MS. THOMAS: In Dr. Mueller's testimony, she was
2 walked through what the different columns stated, and she was
3 asked questions such as: Does this show a discontinuance date?
4 If I looked at this document and it says Final D/C Date, I too
5 could say that. I don't believe that shows an independent—any
6 independent information from the witness. And she also
7 testified that she did not have knowledge of this document
8 otherwise.

9 THE COURT: My recollection is she said she didn't
10 recognize the document, but I thought that as they went through
11 it, she did acknowledge that these were the results of the
12 meetings on the stated dates.

13 MS. THOMAS: Respectfully, I believe that her
14 testimony was that that's what it would appear to be from the
15 document. I don't believe that reviewing the document and
16 saying, yes, the document reflects what the question states,
17 after the leading questions that stated that, is evidence of
18 her own understanding of the contents, or validation that the
19 contents are what they say they are.

20 MR. MORRISON: I believe that the question was: Do
21 you agree that these documents reflect the patients that were
22 reviewed on the first page, 4/15/2015? And she agreed.

23 THE COURT: Okay. The question, though, is the
24 document. I think the substance of the testimony was that, for
25 example, on April 15 of 2015, 15 of the 16 people who were

N961ALL5

1 considered had final discontinuation dates, but I really don't
2 think that the witness really laid a foundation for the
3 document. So I will affirm the objection.

4 MS. THOMAS: Thank you, your Honor.

5 And if I may be heard as to, I believe Exhibit 72,
6 which would be pages Mueller MWAP 28 and 29. I would object to
7 the entrance of this exhibit. There's an issue with this
8 document that had been previously raised. All of the parties
9 are aware of this. If you look at the metadata for the
10 document in question, it actually shows that the last editor of
11 the document was Dr. Bozer, not Dr. Mueller, and as Dr. Mueller
12 originally testified, she did not recall this particular
13 document, so I would object on the grounds that the metadata
14 for the document itself reflects a different author than
15 Dr. Mueller, and she did not have a sufficient recollection to
16 show that she did in fact write this document.

17 MR. MORRISON: I think the opposite was the testimony,
18 that she did, not that she didn't review this document and not
19 approve it.

20 MS. THOMAS: Respectfully, Dr. Mueller was asked a
21 series of leading questions, which I'm not objecting to those
22 questions per se, but she was asked questions after information
23 was read to her. So she was led to believe that this was her
24 writing but originally testified—and if we go back to what she
25 originally testified, she did not recall writing this document

N961ALL5

Mueller - Direct

1 or having seen it before.

2 MR. MORRISON: Personally, I don't recall any
3 confusion about whether she approved this document or not. In
4 fact, I think I went through two where she didn't recall until
5 I landed on this one.

6 THE COURT: We'll review the transcript overnight, and
7 just remind me in the morning, please.

8 MS. THOMAS: Yes, your Honor.

9 I just also would like to identify that the two other
10 pages that were raised were MWAP 18 and MWAP 20. Those also
11 have the same metadata issues that we discussed earlier today
12 and relate to that. I just wanted to put that on the record.

13 THE COURT: I don't think counsel was offering them.

14 MS. THOMAS: I understand. I just wanted to make it
15 clear that there was testimony as to those documents, so I just
16 wanted to raise that as that was discussed this morning as
17 well.

18 THE COURT: Okay.

19 MS. THOMAS: Thank you, your Honor.

20 MR. MORRISON: May I proceed?

21 THE COURT: Yes, sir.

22 BY MR. MORRISON:

23 Q. Dr. Mueller, do you have any idea how many MWAP medication
24 request forms you did not approve?

25 A. No.

N961ALL5

Mueller - Direct

1 Q. Did you ever do any research or investigate how many MWAP
2 request forms you didn't approve?

3 A. No.

4 Q. Were you ever informed by anyone—or strike that.

5 Did anyone ever review your MWAP request forms, to your
6 knowledge?

7 A. Not to my knowledge.

8 Q. Okay. Was there any person overseeing to make sure that
9 your approvals or disapprovals were appropriate?

10 A. I don't know.

11 Q. Okay. It's true that between—some facilities, by the end
12 of the MWAP policy, which would be February of 2022, got their
13 prescription Neurontin levels down to 0 in their facility;
14 would you agree with that?

15 A. I wouldn't know.

16 Q. Okay. You're not aware that Wallkill, Wallkill
17 Correctional Facility, actually got their Neurontin
18 prescriptions in that facility to 0?

19 A. Not aware.

20 Q. Now briefly, I want to talk about the end of the MWAP
21 policy. You're aware that occurred in early February of 2022?

22 A. Yes.

23 Q. And were you involved in the creation of the new policy at
24 all?

25 A. No.

N961ALL5

Mueller - Direct

1 Q. Do you know why you weren't involved in the creation of the
2 new policy?

3 A. No.

4 Q. What is your understanding of why the MWAP policy was
5 terminated?

6 A. I believe it came out as a result of this suit.

7 Q. Okay. And when the new policy, 1.24A, started, did you
8 conduct any training or provide any information to any of the
9 medical providers in your hub?

10 A. What kind of training?

11 Q. Regarding the new policy, 1.24A, and how to prescribe
12 medications with abuse potential.

13 A. I can only conduct that kind of training at the direction
14 of the CMO.

15 Q. Okay. And were you ever directed by the CMO at any time to
16 train your providers and make sure that they are aware and
17 abiding by policy 1.24A provisions?

18 A. Could you repeat that.

19 Q. Sure. Did the CMO, at any time after policy 1.24A came
20 into effect, direct you, as the RMD, to make sure that the
21 providers in your hub are aware of policy 1.24A and following
22 the provisions?

23 A. I don't believe so.

24 Q. Okay. Do you do anything as a clinical supervisor today to
25 ensure compliance of the providers with policy 1.24A?

N961ALL5

Mueller - Direct

1 A. As the RMD?

2 Q. Yes.

3 A. No.

4 Q. It's not part of your job, correct?

5 A. Correct.

6 Q. Are you aware of whose job that is at all?

7 A. I know that the SURNs are conducting audits continuously in
8 all of the facilities to assure that they are in compliance
9 with 1.24A.

10 MR. MORRISON: One second, your Honor.

11 Q. To go back one more second regarding the MWAP request forms
12 that you disapproved because they weren't completed correctly
13 by providers—do you remember that testimony we were talking
14 about?

15 A. Yes.

16 Q. After you were presented with one of these forms and they
17 weren't completed correctly, did you go back and call the
18 providers and train them and tell them what is missing and what
19 you need in regards to each request form?

20 A. Yes.

21 Q. And following that, did that fix the problem?

22 A. With some, yes; with others, no.

23 Q. Okay. And then you would continue—strike that.

24 MR. MORRISON: Nothing further. Thank you, Doctor.

25 THE COURT: Cross-examination, please, counsel.

N961ALL5

Mueller - Cross

1 MS. THOMAS: Thank you, your Honor.

2 THE COURT: Ms. Thomas.

3 MS. THOMAS: Thank you, your Honor.

4 CROSS EXAMINATION

5 BY MS. THOMAS:

6 Q. Dr. Mueller, can you hear me okay?

7 A. Yes. Thank you.

8 Q. Great. Thank you very much.

9 My name is Jennifer Thomas, and I represent Dr. Carol
10 Moores in her official capacity as the Chief Medical Officer
11 for the Department of Corrections, and I have a few questions
12 for you today.

13 You're currently an RMD with the Department of Corrections,
14 right?

15 A. Yes.

16 Q. Do you currently treat any patients?

17 A. No.

18 Q. Do you currently perform any physical exams of patients?

19 A. Not unless a provider in a facility asks me to go with them
20 to see a patient, but not as a routine.

21 Q. Are any individual patients assigned to you currently?

22 A. No.

23 Q. And in what year did you last treat patients at DOCCS?

24 A. As a regular, ongoing—

25 Q. Yes.

N961ALL5

Mueller - Cross

1 A. Well, that would have been when I became an RMD.

2 Q. And is that approximately 2012-2013?

3 A. Yes. Probably more 2013, I think.

4 Q. Okay. Thank you.

5 And do you currently prescribe any medications to any
6 patients at DOCCS?

7 A. No.

8 Q. And in what year did you last prescribe medications to
9 patients at DOCCS?

10 A. I don't know.

11 Q. Would that have been around the same time as you
12 transferred to be an RMD?

13 A. Yes, but sometimes a circumstance comes up where we're
14 asked to because the provider is not available or whatnot, so
15 if there was something anecdotal, I don't recall when that
16 would have been.

17 Q. Okay. But in your regular day-to-day duties it doesn't
18 include prescribing medications currently?

19 A. That's correct.

20 Q. Okay. Do you currently review any prescriptions written by
21 other providers?

22 A. No.

23 Q. Do you currently review any nonformulary requests?

24 A. No.

25 Q. To the best of your understanding is the MWAP policy still

N961ALL5

Mueller - Cross

1 in effect at the hub that you are in charge of?

2 A. Is the MWAP still in effect?

3 Q. Yes.

4 A. No.

5 Q. And is the MWAP policy still in effect at DOCCS?

6 A. No.

7 Q. Do you currently review any MWAP requests?

8 A. No.

9 Q. Earlier you had testified about certain events at Green
10 Haven, right?

11 A. You mean that review committee?

12 Q. Yes.

13 A. Yes.

14 Q. In what year did those meetings occur, to the best of your
15 recollection?

16 A. I think it was 2015.

17 Q. And you testified earlier about events at Greene
18 Correctional Facility, right?

19 A. Yes.

20 Q. And what year did those events occur?

21 A. I don't know.

22 Q. Was that approximately around 2015 or 2016?

23 A. I really would be guessing.

24 Q. Okay. And just to confirm, what year was MWAP implemented?

25 A. 2017.

N961ALL5

1 Q. And in what year was MWAP repealed?

2 A. 2020.

3 Q. Was it February 8, 2021?

4 A. I don't know the exact date, and I do know it was in
5 February.

6 MS. THOMAS: Okay. Thank you. I have no further
7 questions.

8 THE COURT: Redirect, counsel?

9 MR. MORRISON: Nothing based on that. Thank you.
10 Thank you, Dr. Mueller.

11 THE COURT: You may step down, ma'am.
12 Counsel?

13 MS. THOMAS: You may step down.

14 (Witness excused)

15 MS. AGNEW: Your Honor, if we could please just—and
16 I'm not casting aspersions on Ms. Thomas, who is an excellent
17 lawyer and doing an excellent job, but my team just pulled up
18 the original Excel file that was produced to us by DOCCS for
19 the exhibit at Mueller MWAP 28-29, and the metadata actually
20 shows it was authored by Susan Mueller. We're happy to show
21 that to counsel, meet and confer, and come back to you in the
22 morning, before you go through the mayhem of reviewing the
23 transcript. It's up to you.

24 MS. THOMAS: If I may, just for the record, I'm
25 looking at the exact same document, and she's correct that it

N961ALL5

Dinello - Direct

1 does say the author is Susan Mueller, but it says it was last
2 modified by Paula Bozer. So that's what the clarification is.
3 We're both looking at the same document. We're having a little
4 dispute as to what those terms mean, but I just wanted to
5 clarify.

6 THE COURT: All right. Why don't you folks look at it
7 tonight and let me know.

8 MS. THOMAS: Certainly.

9 MS. AGNEW: Okay. Very good. Thank you, your Honor.

10 THE COURT: Is there anything else you want to do on
11 the record?

12 MS. AGNEW: Not from the plaintiff class, your Honor.
13 Thank you.

14 MS. THOMAS: Nothing on this issue. Thank you.

15 THE COURT: Okay. Off the record.

16 (Discussion off the record)

17 MS. AGNEW: Okay. Plaintiffs call Dr. Dinello.

18 THE COURT: Ms. Agnew.

19 MS. AGNEW: Just one moment, your Honor.

20 DAVID DINELLO MD,

21 called as a witness by the Plaintiff,

22 having been duly sworn, testified as follows:

23 DIRECT EXAMINATION

24 BY MS. AGNEW:

25 Q. Good afternoon, Dr. Dinello.

N961ALL5

Dinello - Direct

1 A. Good afternoon.

2 Q. We do apologize to you for the delay. We've been trying to
3 move things along.

4 A. That's okay. Doctors can't complain about making people
5 wait.

6 Q. Okay. Here we go.

7 Dr. Dinello, do you know who I am?

8 A. Yes, ma'am.

9 Q. Who am I?

10 A. Ms. Amy Agnew.

11 Q. And what do I do?

12 A. You are a lawyer.

13 Q. Okay. I want you to just look at what I've premarked as
14 P139 in that pile. And it may be out of order, and for that I
15 apologize.

16 A. Okay. P139.

17 Yes.

18 Q. And you know, given our history, that I review your emails,
19 correct?

20 A. Yes, ma'am.

21 Q. And what is our history?

22 A. We go way back for years with different cases.

23 Q. Okay. Can you look at P139, sir, and tell me, do you
24 recognize that document?

25 A. It looks like an email, yes.

N961ALL5

Dinello - Direct

1 Q. Okay. And are you an author of that email?

2 A. I am on this email, yes.

3 Q. Okay. And isn't it true this is an email exchange between
4 you and Dr. Christopher Wright at Five Points Correctional
5 Facility?

6 A. Yes.

7 Q. And the exchange is roughly dated July 21st of 2020?

8 A. Yes, ma'am.

9 Q. Okay. And in this email do you tell Dr. Wright,
10 "Unfortunately, there are some very unhealthy and liberal
11 lawyers that see DOCCS as easy pickings and continually present
12 lawsuits. The MWAP policy and the way DOCCS approaches
13 chronic, nonpalliative care is currently in their crosshairs.
14 We will keep everyone abreast of changes as they occur." Did
15 you write that, sir?

16 A. Yes, ma'am.

17 MS. AGNEW: Your Honor, permission to treat the
18 witness as hostile.

19 THE COURT: Any objection?

20 MS. THOMAS: I would object because he hasn't shown
21 that he's hostile. Other than reading the contents of an
22 email, he himself has not testified to anything that would
23 demonstrate that he's a hostile witness at this point, and it's
24 plaintiff's own witness.

25 THE COURT: Ms. Agnew.

N961ALL5

Dinello - Direct

1 MS. AGNEW: Your Honor, David Dinello is most
2 certainly a hostile witness. I can keep going if we like, but
3 I don't think it's necessary.

4 THE COURT: Ms. Thomas, go ahead.

5 MS. THOMAS: I'm not sure what the response to my
6 argument is, other than your characterization that he's a
7 hostile witness, but I'd be happy to hear what the argument for
8 why he's a hostile witness is.

9 BY MS. AGNEW:

10 Q. All right. Dr. Dinello, in your email were you referring
11 to me when you said "unhealthy and liberal lawyers that see
12 DOCCS as easy pickings"?

13 A. No.

14 Q. You weren't?

15 A. Not you only.

16 Q. Okay. But I was among the lawyers you were referring to,
17 correct?

18 A. Probably, yes.

19 Q. Okay. And isn't it true you've told me previously that in
20 fact you were referring to me in this email?

21 A. I believe one email. I don't know if it was this one, but
22 yes.

23 Q. Okay. And so, Dr. Dinello, can we agree that in July of
24 2021 there were some reassessments going on for patients who
25 were involved in this litigation?

N961ALL5

Dinello - Direct

1 A. In July of 2021?

2 Q. I'm sorry. July of 2020.

3 A. Maybe. If you say so.

4 Q. Why don't you review the email.

5 A. Let's see.

6 I don't know if it was a reevaluation. He saw the patient.
7 He talked about his chronic pain. I don't know if it was
8 characterized as a reevaluation or not.

9 Q. Can you tell me, isn't it true, reading this email, that
10 Dr. Wright was reaching out to you about the re-prescription of
11 Neurontin to a Mr. Harold Ortiz?

12 MS. THOMAS: Objection to the extent that this
13 document is not admitted as an exhibit at this point.

14 THE COURT: Okay. Off the record.

15 (Discussion off the record)

16 THE COURT: Are you moving the exhibit?

17 MS. AGNEW: Yes, your Honor. I'm going to move to
18 admit Plaintiff's P139 into evidence.

19 MS. THOMAS: We do not object to the exhibit.

20 THE COURT: Received.

21 (Plaintiff's Exhibit 139 received in evidence)

22 MS. AGNEW: Very good.

23 BY MS. AGNEW:

24 Q. Dr. Dinello, looking at this email, isn't it true
25 Dr. Wright was looking—he was writing you about the

N961ALL5

Dinello - Direct

1 prescription of Neurontin to Mr. Harold Ortiz?

2 A. I see his name at the top. He was referring about that
3 patient. He was talking about the medical care of that
4 patient, yes.

5 Q. Okay. And specifically isn't he asking you about the
6 prescription of Neurontin for that patient?

7 A. Let's see. He mentions Naprosyn, Tegretol, gab—gabapentin
8 is mentioned, Neurontin is mentioned, yes.

9 Q. Okay. And do you have any reason to believe that this
10 email wasn't in response to a reassessment that was part of
11 this litigation?

12 A. I have no idea why this was generated by Dr. Wright.

13 Q. Okay. Dr. Dinello, have you previously served as a
14 regional medical director for New York State DOCCS?

15 A. Yes, ma'am.

16 Q. Okay. Give us the years that you served as a regional
17 medical director.

18 A. 2014 to 2021.

19 Q. Okay. And isn't it true you started working in DOCCS
20 around 2009?

21 A. No. It was 2006 or 7, as a moonlighting physician.

22 Q. Then you became part time in 2009, correct?

23 A. Yes, ma'am.

24 Q. Okay. And then you became a full-time physician in 2011,
25 correct?

N961ALL5

Dinello - Direct

1 A. Around then, I think, yes.

2 Q. Okay. And you became a full-time physician after you had
3 medical licensing issues; is that correct?

4 A. No. I don't really know, in all honesty.

5 Q. Is it true that you voluntarily gave up your license to
6 practice emergency medicine as part of a consent agreement?

7 A. No. It was voluntary limitation. You don't give it up;
8 you just limit—limit yourself, not to work with the ER.

9 Q. What does a voluntary limitation mean?

10 A. I promised them I'm not going to look to work in the
11 emergency room—

12 Q. Okay.

13 A. — as an attending physician.

14 Q. In fact, can you walk into an emergency room and serve as
15 an emergency room physician?

16 A. Yes.

17 Q. Right now.

18 A. In Maryland and West Virginia, yes.

19 Q. Okay. In the state of New York, can you serve?

20 A. No, ma'am.

21 Q. Can you do so in the state of Pennsylvania?

22 A. No, ma'am.

23 Q. Why not?

24 A. Because the restriction carries there too.

25 Q. Okay. And then as also a product of that proceeding and

N961ALL5

Dinello - Direct

1 your agreement, you also were supervised by another doctor for
2 three years, right?

3 A. Yes.

4 Q. And during that time you worked for DOCCS, correct?

5 A. Yes.

6 Q. Okay. And who supervised you during that three years?

7 A. The regional medical director, Marshall Trabout, for my
8 corrections work; and for my addictions work, it was Hannah
9 McAdams (ph).

10 Q. Okay. And so was there some kind of reporting or something
11 that happened as part of that oversight?

12 A. Yes, quarterly reporting was sent to the OPMC, which is the
13 Office of Professional Medical Conduct.

14 THE COURT: Sir, may I ask you to slide in a little
15 closer to that microphone, please.

16 THE WITNESS: Sure. Sure thing.

17 Q. Okay. So as I understand it, you served as a treating
18 physician in DOCCS, then full-time from 2011 until you
19 resigned; is that correct?

20 A. Yes.

21 Q. And just so the Court knows, when did you resign?

22 A. In April 1, 2021.

23 Q. And just to put this in the time line, the MWAP policy was
24 rescinded on February 8th of 2021; is that correct?

25 A. If you say so. I'm not sure of the exact date.

N961ALL5

Dinello - Direct

1 Q. Okay. And can you tell me, in your role as a treating
2 physician, were you working with patients on the facility
3 level?

4 A. Yes.

5 Q. Were you prescribing medications?

6 A. Yes.

7 Q. Okay. And then when you became an RMD, did you continue to
8 prescribe to patients and facilities?

9 A. Yes.

10 Q. In what circumstances?

11 A. When they didn't have a physician, which was many of them;
12 where I saw patients, Five Points, Auburn; I even saw patients
13 when I went up to north country and Altona Correctional
14 Facility; I even saw patients at Watertown and—all over the
15 state, barely.

16 Q. Okay. When you saw patients at these different
17 facilities—I'm sorry. Is it your testimony there was no
18 doctor at the facility?

19 A. There might have been a midlevel provider or I was there
20 and there was no doctor and there was somebody needed to be
21 seen and so they asked me to see them.

22 Q. Okay. And then when you served as an RMD, can you just
23 tell us, in the beginning, which hubs did you cover?

24 A. The Elmira and Oneida hubs.

25 Q. Okay. Was there another point in time in which you were

N961ALL5

Dinello - Direct

1 not assigned but rather you volunteered to be oversight of
2 other hubs?

3 A. Yes.

4 Q. Which were those hubs?

5 A. The Watertown and Clinton hubs.

6 Q. So isn't it true during the pendency of the MWAP
7 period—and I'm just going to call that June 1st of 2017 until
8 it was rescinded—that you were generally the RMD for four
9 DOCCS hubs?

10 A. More or less, yes.

11 Q. Okay. And so that means you had the oversight of
12 approximately 20 prisons, correct?

13 A. Yes.

14 Q. And was that a substantially larger number than any other
15 RMD had?

16 A. I believe so, yes.

17 Q. So the impact of any policies or practices you put into
18 place in those facilities would have a greater DOCCS-wide
19 impact; would you agree with that?

20 A. Yes.

21 Q. Okay. So let's talk about the MWAP policy itself for a
22 moment.

23 MS. AGNEW: And I'm just going to caution you, we're
24 not going to finish today, but we're going to get started and
25 then we're going to find a way to get you back, okay?

N961ALL5

Dinello - Direct

1 Q. Let's talk about the MWAP policy itself. Is it true you
2 worked on the policy development for two years before it was
3 promulgated?

4 A. I don't know exact time frame, but it was a while
5 beforehand.

6 Q. Okay. And was that as part of your role as the policy and
7 review committee chairperson or did you bring that as an extra
8 project to that committee?

9 A. I did serve on the policy and review committee. I don't
10 know exactly what those dates were, so I'm not too sure.

11 Q. Okay. And is it true around the same time frame you were
12 also chairman of the pharmaceuticals and therapeutics
13 committee?

14 A. Yes.

15 Q. Do I have the name right?

16 A. Yes.

17 Q. Okay. So you were the chair of the department that decided
18 which drugs went on the formulary; is that correct?

19 A. Yes.

20 Q. And during some of that same time you were also the chair
21 of this policy review committee; is that correct?

22 A. No, I don't think I was the chair. I was just one of the
23 team members.

24 Q. Okay. And so how did it come to be that you assumed
25 control of the MWAP policy development?

N961ALL5

Dinello - Direct

1 A. I don't know how. It just happened. Maybe because I'm the
2 one that decided to—to take control of it and be the forefront
3 to write it.

4 Q. Okay. When you say, "I'm the one who decided to take
5 control of it," was that because it was your idea?

6 A. No. We talked about it, the regional medical directors and
7 a number of other people, the chief medical officer, and we
8 decided that we'd—something should be addressed.

9 Q. Okay. Isn't it true, though, you brought it to
10 Dr. Koenigsmann first and he actually decided it wasn't a good
11 idea at that time and then you reapproached him later and then
12 he said okay?

13 A. I don't believe that's the case, no. I didn't take it to
14 him first, I don't think. He—no, he never turned it down,
15 then it got revisited. No, not to my knowledge.

16 Q. Okay. Can you explain to the Court why it was determined
17 to make the MWAP, let's say, criteria or scheme a policy rather
18 than a clinical guideline?

19 A. A policy has more teeth and it has to be followed, where
20 guidelines are just guidelines and you can follow them or not
21 follow them.

22 Q. Okay. And what made you believe that if it was a
23 guideline, providers within DOCCS would not follow it?

24 A. Because it was happening in the real world with the
25 narcotics and other addictive medications. Guidelines are

N961ALL5

Dinello - Direct

1 everywhere, but yet they're still being written like candy.

2 Q. Okay. Tell me what's "the real world"?

3 A. The world outside of DOCCS; the medical world outside of
4 DOCCS, within the United States.

5 Q. Okay. And you considered DOCCS to be different than the
6 real world because it's a paramilitary organization; is that
7 correct?

8 A. No, ma'am. I think it's just a slice of the American
9 population, with a higher concentration of people that have
10 serious drug addiction problems.

11 Q. Okay. But don't you think that DOCCS is operated in a
12 paramilitary fashion and that's why one rung answers to the
13 next rung answers to the next rung?

14 A. Not necessarily, no. I don't think I believe that.

15 Q. You don't think you've ever used that term, "paramilitary"?

16 A. I know I've heard that term, and it makes sense the way
17 DOCCS works. That's how I'd describe DOCCS, as paramilitary,
18 yes.

19 Q. So you've described DOCCS as paramilitary, correct?

20 A. I'm sure I have, yes.

21 Q. Okay. And so tell me your own prescribing practices. You
22 started limiting your prescriptions of medications with abuse
23 potential yourself beginning in about 2015, correct?

24 A. No, I don't—I think I always have been pretty conservative
25 with medicines that are addictive and habit forming, almost my

N961ALL5

Dinello - Direct

1 entire career. I was trained that way at Penn State.

2 Q. Okay. So there was no time when you started paying
3 particular attention to the types of medications you were
4 prescribing within DOCCS facilities?

5 A. I'm sure there was a time I paid more attention to that,
6 especially as the national epidemic was brought to our
7 attention.

8 Q. Okay. Were you prescribing MWAP medications pretty
9 regularly within the facilities?

10 A. I don't believe so. I'm not too sure.

11 Q. Okay. Can you tell me, did there come a time in your kind
12 of regime as the RMD of some of these hubs when you started
13 encouraging your providers to "think of alternatives to
14 prescribing MWAP medications"?

15 A. Did I have that conversation, with providers?

16 Q. Yes.

17 A. Oh, yes.

18 Q. And you had it quite widely, correct?

19 A. Oh, yes.

20 Q. Okay. And so how would you encourage these providers to
21 change their own prescribing practices?

22 A. It was—just gave them alternatives to treat pain and
23 actually get to the bottom of the real pain and fix it and not
24 mask it with medications. I always encourage patients, let's
25 find the nonpalliative chronic pain and let's fix it, not just

N961ALL5

Dinello - Direct

1 keep masking it and medicating it. Let's get to the bottom of
2 it and see if we can take it away totally, which isn't really
3 possible totally.

4 Q. So let's just start to think about this. When you put
5 together the MWAP policy, how did the provisions of that policy
6 encourage providers to start finding alternatives?

7 A. I don't know, besides it—I don't know how it encouraged
8 them.

9 Q. Okay. So if I understand, you were encouraging providers
10 before MWAP to change their prescribing practices, correct?

11 A. Yes.

12 Q. Were those encouragements successful?

13 A. I'm not sure if they were or not.

14 Q. Okay. So you would talk to a given provider but you would
15 have no idea of what the effect of your conversations or your
16 persuasion would have on him or her?

17 A. I'm not too sure if it had an effect or not. I believe so.
18 I'm not really sure. I didn't really follow up with them.

19 Q. Okay. So you had no interest, is it your testimony, in
20 their prescribing practices pre-MWAP?

21 A. I always have—as a medical—the regional medical director,
22 you have to be concerned about all the practices of your
23 providers. That's kind of what you do when you review charts
24 and you have to do performance evaluations and things like
25 that.

N961ALL5

Dinello - Direct

1 Q. Okay. So how would you know any given provider needed
2 persuasion to choose different prescribing practices if you
3 weren't aware—

4 A. They would come to me and ask for guidance.

5 Q. Okay. So they were coming to you and saying, *Dr. Dinello,*
6 *I don't know what to do?*

7 A. No.

8 Q. *Can you tell me what to do?*

9 A. No.

10 Q. Okay. So tell me how they would come to you and ask,
11 generally.

12 A. They would generally ask other suggestions to treat certain
13 painful conditions, what other means we had at DOCCS at our
14 disposal.

15 Q. Okay. And did each of these providers have access to a
16 copy of the formulary?

17 A. I'm sure they did, yes.

18 Q. Okay. So why wouldn't they know other alternatives
19 available within DOCCS?

20 A. Because the formulary just contains medications. The
21 medication is just a small part of how you treat pain. There
22 are a dozen other things we use to treat pain.

23 Q. Okay. So I just want to clarify your testimony. They were
24 coming to you to look for things other than pharmaceuticals?

25 A. Other than med—sometimes medications, but other modalities

N961ALL5

Dinello - Direct

1 that were safer alternative.

2 Q. Okay. And what were those other modalities that they
3 wouldn't know of within DOCCS?

4 A. They might not know, realize TENS units might be
5 beneficial; they might not realize other medications, like
6 Cymbalta, can be useful for chronic neuropathic pain; Topamax
7 can be used; also, they weren't too sure, some of them, of
8 different orthotics we could use in DOCCS, what would be
9 useful; referrals to specialists who we had available in
10 certain hubs, if we had access to certain specialists. There
11 was a variety of things.

12 Q. Okay. So it's your testimony that providers wouldn't know
13 about the utility or availability of TENS machines?

14 A. They wouldn't know if they're allowed in DOCCS. Based on
15 the wiring and some of the newer doctors and providers, which
16 are a lot of them over the years, weren't too sure what was
17 allowed or what wasn't allowed.

18 Q. Were there facilities within your hubs that didn't have
19 TENS units?

20 A. There are some that did not use it, yes.

21 Q. Okay. And so you would encourage them to look at these
22 alternatives—two of which I note are medications—correct?

23 A. If you say two, yeah. I'm not too sure.

24 Q. I think you just said Tegretol and Cymbalta.

25 A. No. Topamax, I think. Tegretol can be used too.

N961ALL5

Dinello - Direct

1 Q. Okay. All right. We got three now. Good.

2 So how—and forgive me for circling back. I'm just
3 wondering, if you're in charge of your facilities and you're
4 paying attention to these providers, how do you not know if
5 these persuasive conversations you're having were having an
6 impact on prescribing practices?

7 A. I never looked into it.

8 Q. Okay. So did you have any data on prescriptions or
9 prescribing practices?

10 A. Gabapentin was probably the—the one that comes to mind the
11 most, and obviously we were always aware of the controlled
12 substances—Tylenol with codeine, OxyContin, anything that's on
13 the federal drug list. We were pretty aware of what's being
14 used and what's not being used.

15 Q. Okay. And so how did you become aware of data on Neurontin
16 prescriptions?

17 A. Oh, it's well documented throughout the country, in various
18 states and prison systems, and it's well documented. And not
19 only that, personal testimony from probably hundreds, if not
20 thousands of recovering patients who are also inmates that I've
21 gotten to know in my 17 years of being an addiction specialist.
22 So—

23 Q. Okay. I'm not talking about the real world; I'm talking
24 about in DOCCS.

25 A. In DOCCS. These patients were in DOCCS and told me how

N961ALL5

Dinello - Direct

1 they would use it. In fact, DOCCS, gabapentin used to be what
2 we call a self-carry medication. It was so widely abused and
3 diverted that security said, enough is enough, we have to make
4 this a nurse med, and then we eventually had to crush it
5 because hundreds of people were caught cheeking it and selling
6 it on the block. That's well documented. I've seen it dozens
7 of times myself.

8 Q. Okay. What are you—I'm asking about data. I'm asking
9 about hard data that you reviewed created by DOCCS about
10 numbers of Neurontin prescriptions within DOCCS, not anecdotal
11 evidence. Hard data.

12 A. I personally saw it. That's as hard as it gets. Many
13 times. Many times. I personally saw people cheeking the
14 medication.

15 Q. Dr. Dinello, please listen to the question and try to
16 answer it. Don't elicit anything else you need to add, okay?

17 When did you see hard data on Neurontin? Whether it was
18 diversion numbers, abuse numbers, prescription numbers, data
19 derived from DOCCS.

20 A. Besides witnessing it on camera personally, no numbers,
21 hard numbers, no.

22 Q. Okay. When you say on camera, how many videos did you
23 review that you believe constitute data, systemwide data, on
24 Neurontin?

25 A. I'm not sure off the top of my head. I'd say—I'm not

N961ALL5

Dinello - Direct

1 really sure. I've seen so much video over the years. I don't
2 really know how much.

3 Q. Okay. So who created some data somewhere based on those
4 videos?

5 A. I don't know if it was ever taken down and—and put in a
6 form.

7 Q. Okay. And how would you come to review those videos?

8 A. Usually someone from security would alert us to a problem
9 that they're seeing, that they're having, and the people
10 they're catching.

11 Q. Okay. So you're part of the disciplinary process for
12 security?

13 A. No.

14 Q. Okay. So forgive me. It's not clear to me why a doctor
15 would be brought in to review a video as part of a disciplinary
16 proceeding.

17 A. It wasn't—I don't know if it was used for disciplinary
18 reasons. I don't know what that video was used for.

19 Q. Okay. But you think at some point you may have reviewed
20 some video, but you don't know how many and you don't know
21 when, correct?

22 A. I don't know when, no.

23 Q. Okay. So we've got some maybe video, and we've got some
24 anecdotal things, correct?

25 A. If you say so. Anecdotal, yeah.

N961ALL5

Dinello - Direct

1 Q. Okay. But at no time were you ever presented with any real
2 data, correct?

3 A. Just the stuff that I saw personally.

4 Q. Okay. So let's talk about—there was a time, right, when
5 Dr. Trabout sent you down to Elmira Correctional Facility to
6 try to deal with what he considered to be an overprescription
7 of opioids, correct?

8 A. Yes.

9 Q. Okay. And that was around 2011, correct?

10 A. If—yeah, if you say so.

11 Q. Okay. So you spent some time actually at Elmira, right,
12 meeting with patients; is that correct?

13 A. Yes, ma'am.

14 Q. And you believed it was your marching orders to try to move
15 those patients off of opioids and on to alternative treatment
16 modalities; is that correct?

17 A. I wouldn't say marching them off opioids. That's—trying
18 to find safer treatment modalities for these patients that
19 weren't habit forming, yes.

20 Q. But Dr. Trabout was worried about the number of opioid
21 prescriptions at Elmira, correct?

22 A. I would assume so. That's why he sent me down, yes.

23 Q. And as part of that process, did you talk to the actual
24 prescribing providers about their overprescriptions?

25 A. Yes, I—yes, I did. I believe so. I don't know if it was

N961ALL5

Dinello - Direct

1 my time as the doctor or just within the regional medical
2 director, but I may have had discussions with providers.

3 Q. I'm talking about Elmira, 2011.

4 A. I believe so, yes.

5 Q. Okay. And then later, in approximately 2015, you served on
6 the narcotics review committee at Green Haven, correct?

7 A. If—yeah, if it was 2015. I was there, but I don't know
8 exactly what time, what year.

9 Q. Okay. You were there. And can you tell the Court what you
10 believed the marching orders were for the narcotics review
11 committee. What did you do?

12 A. It was really no marching orders. It was just a review of
13 patients' medications to make sure that they were on safe
14 medications and there was no safer alternative that wasn't
15 habit forming or addictive.

16 Q. Okay. And you believed that this was a by-product of the
17 termination of the *Milburn* consent decree, correct?

18 A. That's what I was told, yes.

19 Q. Okay. And how did you understand that the termination of
20 *Milburn* had something to do with discontinuing patients from
21 medications at Green Haven?

22 A. Just because it came coincidentally. *Milburn* ended, and
23 they—I think there was a concern they—there was like 500 Perc
24 tins, Percocet tins missing, and I think that prompted a big
25 audit, and I got asked to take a look at the patients and—

N961ALL5

Dinello - Direct

1 Q. Wasn't it 9900 Percocets that went missing?

2 A. It could be. It was a lot. I don't know exactly the
3 number.

4 Q. And wasn't it found it was actually a nurse who had
5 diverted those Percocets, correct?

6 A. I really have no idea who was—I did hear a nurse, though;
7 you're right. But I didn't—at the time I didn't really know
8 who took them.

9 Q. Okay. So—

10 THE COURT: When you get to a convenient point to end,
11 let me know.

12 MS. AGNEW: I think it's convenient.

13 THE COURT: All right. Would you people confer with
14 Dr. Dinello and let me know when we're going to resume him,
15 please.

16 MS. AGNEW: We can, your Honor. Thank you.

17 THE COURT: Good afternoon, friends. I'll see you in
18 the morning.

19 (Discussion off the record)

20 (Adjourned to September 7, 2023, at 9:00 a.m.)
